From: Mike Curtis (KC)
Topic: 3165 Message: 3176

T147 is showing up as a neighbor to T134 with a CC of 851.5500 now as well so it looks like they've make the switch to the "proper" channels. Maybe the pre-rebanded frequencies were just a test or maybe even an "oops" ;)

From: StarCom21@yahoogroups.com [mailto:StarCom21@yahoogroups.com] On Behalf Of Kris
Sent: Friday, February 13, 2009 4:14 AM
To: StarCom21@yahoogroups.com
Subject: [StarCom21] Re: T147 On-Line and Live (DeKalb City)

I just saw Mike's message.
I am finding T147 using 851.5500 as a control ch.(T126 is conferming this also)
Other ch. in use. 851.2000 ivd, 851.8000 avd, 852.6000 avd.
all other info Mike posted is the same.Signal is great here in Elburn.

Kris

Mark;

No, Pro96Com only works with GRE made digital scanners, such as the Pro96/2096, Pro106/197 and PSR500/600 radios. They produce a data stream thru the programming port that is obtained via a special keypress sequence.

Ron and all,

I believe that TGs 2043 and 2046 are both patched to 155.055 (IREACH in Illinois). In the last few months I have heard Portage (Indiana) PD traffic on one TG or the other from time to time (their dispatch repeater is on 155.055). Not sure why both of these TGs are patched to 155.055 or whether both TGs are used by ISP District 15 or not.

3182. StarCom21 Site 325 Edwardsville

Yahoo group: StarCom21
Date: 2009-02-15 19:55:13 UTC
From: Rich Carlson
Topic: 3182 Message: 3182

Is 325 (Edwardsville) a 700 MHz. site, 800 MHz. or both?

I have freqs listed as:

774.34375, 774.84375, 775.33125, 775.08125, 775.09375, 775.58125, 775.83125,
867.11250, 868.66250, 867.77500, 866.25000, 854.01250, 860.33750,

RR shows it as 800 only but other records show 700 there.

It is a 800 MHz site now.

It has been since the beginning of the year.

RadioReference.com is correct and has the update notice under the
"Latest News Updates"

Yes, I have got them all and saved them for updates. I have been working on several projects at work, including a new 9-1-1 Center build, so have had little time to work on Profiles. I am starting on going thru the accumulated notes now, thus the inquiries.

On Site 325, have they eliminated all the 700 channels to make it 800 only?

Thanks Terry!

Yes, they sure did, licensed all by madison county and ameren at the same location.

Also, clinton county is on SC now and we think the moved site 301 closer to clinton county.

Was just worried you were not getting the emails from the new Starcom21 RR email addy.

Thanks much
terry

3190. CARMA StarCom21 Profile updated

Yahoo group: StarCom21
Date: 2009-02-16 13:38:06 UTC
From: Rich Carlson
Topic: 3190 Message: 3190

I finally got a chance to start doing Profile updates, starting with the StarCom21 Profile. You may download it at http://www.carmachicago.com/profiles

I will get to the others soon. For all those who have sent me updates in the last couple months, these have all been saved and will be gone thru as I have time. I will let you all know when the rest are posted.

Enjoy!

3195. Programming the McHenry Site [146]

Yahoo group: StarCom21
Date: 2009-02-18 15:26:24 UTC
From: Jack Waterman
Topic: 3195 Message: 3195

I've been reading about problems programming the NWCD system post-rebanding. The new, re-banded frequencies for McHenry StarCom site 146 are now available. It appears from my reading that part of the problem scannists are having with the NWCD system is the need to delete the original system and add the new freqs as a new system(?). Is this necessary for the re-banded Site 146?

3196. RE: (CARMA) Programming the McHenry Site [146]

From: John Zelz
Topic: 3195 Message: 3196

I just manually went in and changed the frequencies in my 396T and it worked fine. No reprogramming other than that. I haven't had any traffic, as there isn't much on it yet. Just most of the statewide groups, ILEAS, etc. from time to time.

Subject: (CARMA) Programming the McHenry Site [146]

I've been reading about problems programming the NWCD system post-rebanding. The new, re-banded frequencies for McHenry StarCom site 146 are now available. It appears from my reading that part of the problem scannists are having with the NWCD system is the need to delete the original system and add the new freqs as a new system(?). Is this necessary for the re-banded Site 146?

Topic: 3195 Message: 3197

I think the problem people have been having with NWCD after re-banding is that you have to:
1. Load the system as a Mot Type 2 CUSTOM
2. Enter a custom band plan (easy to do with ARC396 by clicking on "Re-banded")
3. Set to Control Channel Only
4. And some folks say set Icall to "OFF"
I personally have done all the above and seem to be having no problem with NWCD - despite the fact that I added the re-banded freqs and did not remove the old ones.

From: Starcom21
Topic: 3198 Message: 3198

Since Starcom21 has been active, has any one heard a peep out of these units?

They would be "Ida-Charles" units.

I used to hear them activity with the district dispatchers on Low Band/High Band in the old days, but can't recall hearing anything of them lately.

I would assume that most of their non-dispatch traffic (10-41, 42) would be ENCrypted.

Any ideas?

Terry

Topic: 3198 Message: 3199

In the Chicago area they operate on the District Chicago extra
talkgroups, mostly 9009 (Chicago E) and 9010 (Chicago F).

Other districts they operate on the regular ISP channels, or whatever
channels the DNR/SOS uses. This depends on the local Districts
practices.

Never heard of them using any encryption, there really is no need for
it in their mission.

3200. New Rockford SC21 Site - FCC Application

Yahoo group: StarCom21
Date: 2009-02-21 12:17:22 UTC
From: Starcom21
Topic: 3200 Message: 3200
Attachments: 12 described; binary payloads are missing from this source WARC

Wondering if these be added to the current Rockford simulcast system, or be a separate site (TOWER) on the same 3 locations as the other T11?

Terry

They may not be mandated to go to STARCOM21 now, but read Illinois House Bill 46. That could change, depending on how the final version of the bill is written.

But lets just hope that this is not passed, unless of course you are one of the few that does not care if the tax rates go up. Illinois can not pay there bills now, so why add this to the problem. Some Countys will just go on there own. And yes I am one that has written to those that make the House Votes to veto this in the state of Illinois. SC21 is a great improvement for the Illinois State Police as there previous system was not functional, but now Ameren (Cilco) is using your tax dollars and still raising there rates. Spending needs to STOP, and you can help make it happen!

McHenry County is not mandated either. They have though opted and commited to converting the Sheriff's Department to SC21. So to answer the original post, I believe it is a matter of finalizing the funding from the county goverment. Once that is done, they should get on that system.

Ron...

I assume you are correct, according to the license.

Also, 852.3125 should be 853.3125.

I've corrected it. Sorry

Terry

Yes a very good article, and here is your chance to have your say,
take the time to post a comment on that site, I did and will stand by
what I said. "forever"

3213. Bloomington (Ill.) is re-thinking its 2006 pull-out from the McLean County comm center.

Budget Forces City to Re-Think Center Pull-Out
(http://www.911dispatch.com/db/index.php?option=com_content&task=view&id=2370&Itemid=1)

Friday, February 27 2009

Faced with a $5 million budget deficit, the city of Bloomington (Ill.) is re-thinking its 2006 pull-out from the McLean County comm center. Mayor Steve Stockton said it costs about $2 million to operate the city's own comm center, a figure higher than anticipated. He also admitted to reporters that the expected improvement in performance hasn't materialized, either. The city's police and fire chiefs criticized the county comm center in the years before the pull-out, saying it didn't provide sufficient service for the city. The city-county differences generated bad blood between the two entities, which could affect any future negotiations for Bloomington to re-joint the center. Moving back to the center will not necessarily solve the original problems of officer and firefighter safety that the city raised with county officials.

3214. GRE/RS Digital Scanners

Yahoo group: StarCom21
Date: 2009-03-03 08:00:03 UTC
From: Terry (SC21)
Topic: 3214 Message: 3214

OK... I'm getting very close to purchasing my second digital scanner.

I'm almost sure it will be a GRE Model this time.

My first one was a BCD-396T, which I believe works just fine.
BUT, I do have to send it in for repair, as the data jack has come loose
(fell out) and the ear jack is now loose.

Questions (Sorry if these have been asked or repeated before)

1) Are ALL operations on both scanners are the EXACTLY the same (GRE vs RS)?

2) {Confused} PC-IF Data Output -- what can you get out of this, or do
you have to install a separate Discriminator Tap for full usage
---I have read Rich's report on
http://www.radioreference.com/forums/gre-scanners/85155-psr-500-discriminator.html

INFO I HAVE FOUND ON THIS:

Discriminator Data Via PC/IF Cable

Although this is technically not the equivalent of a discriminator tap,
for the vast majority of people who want to obtain information from
unaltered audio want it so they can run a trunking program like
Unitrunker <http://www.unitrunker.com>. Until recently, all trunking
programs neeed discriminator audio and would convert that audio to data.
Rick, Unitrunker?s author, has added support for the PSR-500/600
discriminator data over the PC/IF cable and if you?re using Unitrunker
you can get all of the information you need for trunking purposes. I
just happen to think Unitrunker is the best trunking program out there
for Moto / EDACS anyway, although it supports more than that.

At any rate, the bottom line is that this is a bonus. It took very
little, if any additional hardware for GRE to accomplish this since the
data comes over the same cable that you already use to program the PSR.
It was a novel idea, and it?s the one thing that no other scanner
manufucturer has done yet. Kudos to GRE.

) Can you monitor LTR frequencies like you can on the GRE Pro-97 and
Pro-2055?
---On those scanners you can figure out the LTR LCN easily but just
monitoring the frequency in LTR Mode
------Like it would display 0-02-255 (or -253) during the CW-ID or
during all or certain idle-bursts along with Rxx to identify the LCN

4) The "WildCard" option on Talkgroups? What is this exactly? Is it
required to be entered to pick up TG's that have not been entered in a list?

5) Weather Alerts, can it be programmed for Weather Alert monitoring
WHILE scanning like the 396 can?

OR maybe I'll be waiting for the BCD-396XT !

Thanks
Terry

3215. Re: GRE/RS Digital Scanners

Terry
I have the RS 106, I could not be more pleased with this radio, The supplied manual is ok, I found myself going over certain functions several times befor I figured it out, Could be my learning curve with object scanning, I did download a copy of the GRE manual and I found it to be most helpfull in programing my scanner, I would say that both radios share basic commands for programming.
Regards
Dave

3216. Re: (CARMA) GRE/RS Digital Scanners

Yahoo group: StarCom21

From: Brian
Topic: 3216 Message: 3216

Terry,

I have owned the GRE500 since its' first week of release and the Pro106 about a month into its' release. I have field tested the GRE500 ins and outs and once you learn it, you will call on it often. The 106 is identical in application and the keypad is identical in placement. I think I know A LOT about these 2 scanners so I feel qualified to speak up a little here......

First, I never have used any discriminator taps or tried it with these so I cannot respond to that.

The LTR works very well and will give you the LCN's accurately, so long as those frequencies are used. If a frequency has not been used yet, I have noticed they won't get assigned. They will stay where you programmed them.

Wilcard is VITAL to finding new TGs. Wildcard group and private are VITAL. Wildcard private will enable I calls for EDACS and Motorola versions by other names. The comparison of wildcard to Uniden is the difference between SEARCH and SCAN settings while trunking on the 396. If wildcard is not programmed or is locked out, then you only hear the talkgroups you already have programmed.

I like getting to know my scanners by hand and can do everything by hand. That is important. But, I rely on software to make changes, alpha tags, etc.. To me that saves HOURS and HOURS of tedious programming. I have tried PSREdit and Win500. I like both. I settled on Win500 as my dedicated software though.

AND, I use Win500 for both the 500 and 106. It works!!!!!!

I don't do the weather alerts on my 500 or 106. I have a dedicated radio for that alone at all times. Sorry, can't help on that. Good luck should you buy either the 500 or 106. They both rock.

Brian

Subject: (CARMA) GRE/RS Digital Scanners

OK... I'm getting very close to purchasing my second digital scanner.

I'm almost sure it will be a GRE Model this time.

My first one was a BCD-396T, which I believe works just fine.
BUT, I do have to send it in for repair, as the data jack has come loose
(fell out) and the ear jack is now loose.

Questions (Sorry if these have been asked or repeated before)

1) Are ALL operations on both scanners are the EXACTLY the same (GRE vs RS)?

2) {Confused} PC-IF Data Output -- what can you get out of this, or do
you have to install a separate Discriminator Tap for full usage
---I have read Rich's report on
http://www.radioreference.com/forums/gre-scanners/85155-psr-500-discriminator.html

INFO I HAVE FOUND ON THIS:

Discriminator Data Via PC/IF Cable

Although this is technically not the equivalent of a discriminator tap,
for the vast majority of people who want to obtain information from
unaltered audio want it so they can run a trunking program like
Unitrunker <http://www.unitrunker.com>. Until recently, all trunking
programs neeed discriminator audio and would convert that audio to data.
Rick, Unitrunker's author, has added support for the PSR-500/600
discriminator data over the PC/IF cable and if you're using Unitrunker
you can get all of the information you need for trunking purposes. I
just happen to think Unitrunker is the best trunking program out there
for Moto / EDACS anyway, although it supports more than that.

At any rate, the bottom line is that this is a bonus. It took very
little, if any additional hardware for GRE to accomplish this since the
data comes over the same cable that you already use to program the PSR.
It was a novel idea, and it's the one thing that no other scanner
manufucturer has done yet. Kudos to GRE.

) Can you monitor LTR frequencies like you can on the GRE Pro-97 and
Pro-2055?
---On those scanners you can figure out the LTR LCN easily but just
monitoring the frequency in LTR Mode
------Like it would display 0-02-255 (or -253) during the CW-ID or
during all or certain idle-bursts along with Rxx to identify the LCN

4) The "WildCard" option on Talkgroups? What is this exactly? Is it
required to be entered to pick up TG's that have not been entered in a list?

5) Weather Alerts, can it be programmed for Weather Alert monitoring
WHILE scanning like the 396 can?

OR maybe I'll be waiting for the BCD-396XT !

Thanks
Terry

Sprint-Nextel: Owes Nothing for Rebanding
(http://www.911dispatch.com/db/index.php?option=com_content&task=view&id=2375)

Posted: 03 Mar 2009 12:27 PM PST

Sprint-Nextel executives believe that the company will not owe the federal government any money once the mandated 800 MHz rebanding project is finished, as reported in the company's latest financial filing with the federal Securities and Exchange Commission (SEC). In 2002 the FCC ordered the company to pay the cost of re-tuning public safety and other radio systems to reduce interference with public safety 800 MHz systems. Under the FCC's deal with the company, Sprint-Nextel will receive credit for the costs of re-tuning and the value of certain 700 MHz and 800 MHz spectrum it turned back to the FCC. Those credits would be balanced by the value of a 1.9 GHz allocation given to Sprint-Nextel, with the company owing the FCC money if the credits were less than the value of the 1.9 GHz spectrum. But Sprint-Nextel estimates its final re-tuning costs at from $3.2 billion to $3.6 billion, and the value of the 700/800 MHz spectrum at $2.1 billion. Since the value of the 1.9 GHz allocation is about $4.9 billion, the company says, it will owe nothing. Download (pdf) the pertinent pages of the company's financial filing here (http://www.911dispatch.com/reference/sprint-nextel_10k_2009.pdf).

It will ONLY be with the GRE500/600 and the Radio Shack versions of the same GRE models....the Pro106 and Pro197. You don't NEED software to see the IDs. It displays right on the scanners. If you do have software, it will show radio IDs when you are looking at a real time display of your scanner. The software will not store those IDs as far as I know (I rely very little on my Win 500 and I have never seen *Store ID* come up for a radio ID number, only talkgroups.) Although you can store I Call IDs either via scanner itself or within a software program.

Careful with the radio IDs as far as identifying cars, patrols, etc.. Sometimes radios are switched out, new cars issued, and a host of other things. Not a very valid tool. Also, without getting into a long discussion on this, some radio IDs do not display or only one side of a conversation will display. In other words, those IDs don't tell you much of anything.

Pro96Com (http://psredit.com/pro96com/index.html) in conjunction with the appropriate RS/GRE scanner (and the upcoming Uniden 396XT) will let you monitor the data stream on P25 control channels which includes the talkgroup and radio information. Radio IDs can change and move around, but the generalizations in the CARMA profile are typically accurate.

If you are trying to set it up for StarComm 21, the BC8t does not do the SC21 systems, only Edacs, Motorola type II and some others.

If you are trying to program starcom21 into it, it won't work. The scanner needs to be motorola type 2 P25 compatible for that and generally most places those cost about $500. I would recommend the BCD996T. As far as programming analog trunking systems into it, just add the control frequencies and the talk channels just like any other trunking scanner.

3234. Road Trip To Greenville/Trenton (Bond/Clinton Co's)

Date: 2009-03-14 04:42:01 UTC
From: Terry (SC21)
Topic: 3234 Message: 3234
Attachments: 2 described; binary payloads are missing from this source WARC

*US Federal Correctional Institution - UHF (Greenville) *

http://www.radioreference.com/apps/db/?sid=680
Since my last visit, the control channel has changed again.
It is now 409.4175 still with the sysID of B204

I'm not sure if the custom freq table is correct or not, had a rough
time following this system on the BCD-396.

Custom Frequency Tables

Add a custom frequency table

Base:

Spacing:

Offset:

Base Spacing Offset Action
406.0000 50.0 380
<http://www.radioreference.com/apps/dbadmin/?action=doEditCustomFreqTable&opt=e&id=97>

The Pro-97 picked up a few TG's but I didn't get any voice traffic (48,
32, 112)

Voice channels detected: 408.2125, 406.0000

Starcom21
Bond County SC21 site is NOT on the air yet.

T301 Mascoutah (St Clair)
Control channel is still 775.34375
Voice channel 775.80625
**This site HAS NOT moved to Trenton, there does not appear to be a
change of location for this site.

T314 Junction City (Clinton)
Control channel was 774.53125
Voice channel 774.31875, 775.28125

T330 Vandalia (Fayette)
Control Channel was 866.975
voice channels in use were 854.1875, 868.3375

7001 Identified as Emergency Dispatch 1
7002 is an Emergency Channel, just heard this week, assumed to be

Emergency Dispatch 2

Cleartalk
860.5125 control channel of Mt Olive, at 99% in Greenville... either really getting out or there is another site.

Ameren
Albers Clinton Co Site -- appears to no longer be on the air

Lots of other updates added to St Clair, Bond & Clinton Counties, on RadioReference.

Terry

Terry,
I don't think 409.4175 is a valid frequency.
Are you sure this isn't a type2 system with P25 talkgroups?
That would explain no traffic on the Pro97.

He means as in the correct step sequence. Here is the range in 6.25 steps.
409.4000
409.40625
409.4125
409.41825
409.4250

Though you couldn't tell the different between 409.41825 and 409.4175 with any of the scanners on the market today.

Did you look at the actual datastream with a program like unitrunker. Does UHF trs' not show the actual fequency in a motorola system like on 800. I have no exprience with a motorola trs on uhf.

3238. District 18 Radio Issue

Yahoo group: StarCom21
Date: 2009-03-17 04:15:43 UTC
From: Terry (SC21)
Topic: 3238 Message: 3238

Tonight, heard District 18 attempting to contact 18-36 on SC21. Nothing. Then, she switched to high band, 155.445 CSQ, Nothing.

So, she called Jersey County Sheriff Dispatch and they contacted him on their 155.805 Repeater.

ugh on the State Radio System, at least in that area.

There are multiple towers in Calhoun County, 1 in Godfrey, 1 in Beaver Dam that is to cover the area, but there are no towers located in Jersey or Greene Counties.

3240. New Pro-106 / Pro96com

Yahoo group: StarCom21
Date: 2009-03-23 20:31:01 UTC
From: Terry (SC21)
Topic: 3240 Message: 3240

I've purchased a pro-106 during the sale.

Trying to program by hand was insane. Couldn't figure out a programming
a TRS at all.

Finally had the chance to go pick up the USB Cable to program with software.

I have to say, this radio is out-performing my BCD-396 by what I think
is a pretty good margin.

Picking up sites better and seems to be decoding the P25 better.

Also, just started running pro96com on it today, and wow... some of the
info I'm seeing is great.
Never had a disc. tap to do anything like this before, so never seen it
in person.

I've got so much I want to do, plus simply just getting in programmed
with all the stuff I want.

Just wanted to give out my 2 cents on this!

I loaded the Troy, Illinois P25 listings from radioreference.com (TG-7961) and I seldom hear anything going on, maybe once an hour or so. It was always busy when they were conventional. Does anyone know anything different than what's listed? Thanks.

They are very active on that talkgroup.

Usually on the 325 tower, sometimes on 323 or 353 E St Louis and
occasionally T301 and T359.

What scanner do you have?
Terry

Do you have any problems with other SC21 TGs? Receive them just fine?

There maybe a factor in your area that just maybe some of the Local Agencys are not using the Star Comm system, we have 3 Countys that are not switching to Starcom at present, (no money)!! to do so.
So if you where driving thru my area you would not hear anyone other than the State Police and Ameren. I think they have the system working well for the time being, as I can hear towers that are 50 air miles away when mobil, but this is not always, my base system with an outside antenna at about 20 feet hears the same, but because there are 3 different systems being used by Sheriff and Citys, I have scanners for each. Just thoughts that I have found to be correct.

3249. BCD396XT

Yahoo group: StarCom21
Date: 2009-03-25 03:50:17 UTC
From: RobertKlamp@aol.com
Topic: 3249 Message: 3249

I cant wait to buy a BCD396XT which was released recently but need to know when software will be available to program it preferably something I could transfer my 996 or 396 files to and upload them to the BCD396XT is there plans on a release date for BCD369XT UASD or is BUTEL releasing ARC396XT or any other freeware or software that will handle my needs for the BCD396XT because its needless to say I will not be buying one until there is some form of fully functional programming software.

Thanks for any answers,

Robert Klamp

3250. Re: New Pro-106 / Pro96com

Yahoo group: StarCom21
Date: 2009-03-26 01:26:07 UTC
From: radiostarcom21
Topic: 3240 Message: 3250

First thing you need to do is FORGET banks and channels.
FORGET banks and channels!
Programming by hand is really very easy once you grasp the concept.
Granted, the learning curve is steep at first.
What I did was, every night for about an hour, programmed the same type of objects over and over. I started with the local starcom site. When I screwed something up, I either figured it out and fixed it, or , reset the scanner and started over. After about a week-10 days, it was second nature, very easy to do. Do I want to do it by hand all the time? No! But it is important that you know how to program by hand. What happens those times when you are away from the computer and you need to change or add something?

No flames here....but....

Yes the GREs are much better than the 396.

Pro96com software is awesome. I noticed all the pro96com files in the files section are getting quite old. Can those be deleted and everyone start posting their local sites again?

George

Date: 2009-03-30 02:08:11 UTC
From: Terry (SC21)
Topic: 3254 Message: 3254

I've seen discussions on some "great" batteries that people have used for their scanners.

I recall them being an off-brand name and/or another brand name we were carrying at Walgreens at one time.

Opinions on what to use? (Looking for a good deal too)

Using BCD-396 and Pro-106.

Thanks
Terry

3255. Listining to more than one tower

Yahoo group: StarCom21
Date: 2009-04-01 05:30:16 UTC
From: tgbrengel
Topic: 3255 Message: 3255

Right now I have my PSR500 set up with different VFolders for different StarCom towers (usually by county). I was wondering if there is a way not have to switch VFolders when I get out of range of one tower. Example, I would like to listen to the North Cook County Simulcast without having to switch from Lake County Simulcast. How can I do this? Do I add the other set of freqencies to the Lake County site? Thanks.

From: Kevin
Topic: 3251 Message: 3260

I noted brief use of this TG during a IEMA Division of Nuclear Safety drill last November. St. Joseph Hospital in Joliet asked an unknown user to "go secure" and traffic was encrypted after that. Perhaps a statewide (IDPH?) EMS TG? FWIW, I have also noted encrypted traffic on 4639 in the past - might that might be related to 4633?
I was also able to confirm (via user traffic) last November that 4601 is the IL State Fire Marshal's "statewide" TG.

You should be able to hear it fine there. Have you tried downtown Crystal Lake to make sure your configuration is correct? They have a transmitter on the UP tower. Remember that they rebanded. The current control channel is 851.7375. I'm hearing it near Walkup and Crystal Springs Road.

3267. Re: 4633 - "Channel B EMS"

Yahoo group: StarCom21
Date: 2009-04-07 16:38:14 UTC
From: Kevin
Topic: 3251 Message: 3267

I heard a couple of downstate hospitals and a county public health department performing radio checks on 30331 while listening to Site 101 (DuPage County) this morning - this TG was IDd by one of the users as "Zone B Public Health". After they were finished, one of the hospitals said that they were switching back to the "Zone B EMS" TG (possibly the TG 4633 "Channel B EMS" that Mike reported hearing below?). I'm thinking that it's possible that "Zone B" might be a reference the radio's zone (or bank, in scanner terms) that these TGs are programmed in rather than a geographic zone. Anyone know for sure? I'm thinking that the 30331 "Public Health" and 4633 "EMS" TGs are likely statewide TGs, as I heard some encrypted traffic on 4633 earlier this morning and have monitored downstate county public health department nets on TG 30331 (also via Site 101) in the past.

I'm sure that's it - I heard St. Mary's Hospital in Decatur calling Decatur Memorial on "Channel B EMS" again today after which they asked them to switch to "B EMS R6" so I'm guessing "Zone B" is where these EMS channels are and that there are 11 "regional" EMS channels to go along with the "statewide" EMS channel. Heard a bunch of traffic between Cook and Will county hospitals today on 4633 as well - about half encrypted :(

That is strange. Between the tower in downtown and the one in Ridgefield, you shouldn't have any problem picking it up anywhere in the county, especially with a better antenna. I'm still using the stock antenna on my 396 and have no issues.

Don't feel bad Rich, I'm near Lakewood Rd and Reed Rd and get NOTHING. This with a Diamond Discone in my 3rd floor attic.

Yikes!

Mark

This is not true, he deputies working Day & Afternoon shifts all have Starcom portables, the Midnight will start getting theirs tomorrow morning. Also some of the vehicles have mobiles as they are slowly putting those into service. The Detectives, Corrections and Court Security are still on the old system and will be phased in later. I can tell you that's the truth as of 4pm today.

I have a BCD-996T with the latest firmware. I can program in the 4 frequencies for the Belleville 3-005 location and I decode traffic without a problem.

When I load up the 16 newly rebanded frequencies for the St. Clair 359 site, everything is choppy and hardly decodes at all. I've adjusted the decode level, auto, manual, ect nothing clears it up. Is there something I need to do since they are now using the newly rebanded frequencies?

Does anyone have a working USD or BCTOOL file for the St. Clair system? Thanks for any help.

If the system is configured correctly (and I'm a GRE user) you should only need the primary and alternate control channels, not all 16. Not sure about how your software is setup, but in the PSREdit software we have the option to choose ROAM or STAT or OFF for multi-site options. You may wish to play with those

I'm not sure that I can put in just the control channels, as long as I've had this thing this is the first time I've started to program a trunked/p25 system into it.

I have the Waterloo, Belleville, and Mascoutah sites programed in with all the frequencies for each, and I decode without a problem, they all sound great. With the same settings on the St. Clair system its horrible!

I'm sure the GRE is different from the 996T. At the very bottom of this page it talks about re-banding and the new firmware...

http://info.uniden.com/twiki/bin/view/UnidenMan4/BCD996TFirmwareUpdate

I don't know exactly what they are trying to accomplish here, I haven't a clue what could be causing my problem. I'm hoping to find someone that is using the 996T without any issues on the St. Clair system.

Thanks for the tips Cris.

3281. Re: [StarCom21] St. Clair County

Yahoo group: StarCom21
Date: 2009-04-09 12:39:23 UTC
From: todd hartzel
Topic: 3278 Message: 3281

Greetings Scott,
     Make sure you have the latest version of the bcd-996t firmware.
That is paramount. Also, I live in South St Louis County. I get 1 to
2 bars of signal strength from t359 in st clair county. Very weak here.
I also get signals from a couple of towers which causes cancellation
of the signals in my radio. I use a bcd-396t, which is the handheld
twin of the bcd-99t.

Here are some things that might help you. They worked for me.
First, turn OFF AUDIO AGC. Contrary to other reports, it does not
work very well. And causes alot of amplified background noise during
low to medium audio conditions. You can access it under the SETTINGS
menu. There will be two listings under: Set Audio AGC. I would turn
them both OFF.

Here are some more settings to change:

- SETTINGS > P25 Waiting Time > 0 ms
- SETTINGS > P25 Adust Mode > 3
- SETTINGS > P25 Adjust Level > 200, 175 or 150

  (try 200 first ; P25 Adjust Level, I find, to be the most important setting)

Then under the T359 (St Clair County) system, change
or set these:

- T359 > Edit Sys Option > Adjust P25 Level > AUTO
- T359 > Edit Sys Option > Set Hold Time   > 0
- T359 > Edit Sys Option > Set Delay Time   > Off
- T359 > Set Modulation > FM

Next, bring up the P25 ERROR Screen by scanning the
T359 system, and holding down the FUNC key, and tapping
the KNOB twice. Your screen should look something like
this:

ERR:--- 8 AUTO
T 1.35 1.58 1.80

Change the ACQUIRE setting by holding down FUNC, and
twisting the KNOB til you get this on your screen:

ERR:--- 7 AUTO
T 1.35 1.58 1.80

Now moitor the system for awhile. And watch screen for ERRORs.
While on the CONTROL channel it should show this screen:

ERR:--- 7 AUTO
T 1.35 1.58 1.80

When you hear audio (receiving a talkgroup), it should look like this:

ERR: 0 7 AUTO
T 1.35 1.58 1.80

The ERR: 0 is your current ERROR rate in the voice datastream.
Which if it reads ERR: 0, then you are getting <ZERO> errors in
the data stream. You should get ERR: 0 at all times day or night.
It means your decode is perfect. If it reads something else then 0,
 then you are receiving some errors in the decode. Anything under
ERR: 20 should be ok. Anything above ERR: 20, means you are
getting alot of errors. You might need to adjust your antenna
location, orientation or direction. Error rates over 20, are excessive.
And usually means that something needs to be adjusted.

Even with only 1 or 2 bars of signal strength, I do manage to get
a perfect decode rate on the ERROR screen. Try to shoot for the
perfect condition:

ERR: 0 7 AUTO
T 1.35 1.58 1.80

These same settings also work for the new St Louis City P25 system.
And these settings can be applied to all of Starcom 21's towers, with
a very minor change in the SETTING. For T305 or any other Tower on
SC21 (except T359), I use:

ERR:--- 9 AUTO
T 1.35 1.58 1.80

Like most SC21 listeners, even though I am in Missouri in South St Louis
County and get very, very weak signals ; I can still receive several SC21
sites at my QTH. I get the following:

- T305
- T323
- T353
- T358
- T359

Just so you are aware, if you set the following:

- SETTINGS > P25 Adjust Level >

To something low, like 1, or 25, or 50. You are going to notice serious
motorboating of the P25 digital audio. I think the bcd-996t (like bcd-396t)
comes with a default of 50 for this setting. My weak reception of the
system which probably introduces some ERRORs into the datastream
does not help. But leaving the P25 Adjust Level at its default or on a
low value below 50, just does NOT work under weak signal conditions.
I find 150, 175 or 200 to be more appropriate. I have my bcd-396t's

- SETTINGS > P25 Adjust Level > on 200.

You can consult this next link for more on the whole P25 adjust thing:

http://wiki.radioreference.com/index.php/P25_audio_decode_level_adjustment_(BCD396T)

From: Ron H.
Topic: 3282 Message: 3283

Here in Mason County to Peoria County, they seem to be using it on a limited basis, keep in mind that most sites and DNR officers still have VHF radios, so the info on RR seems correct, or anyway I hear them, but on a very limited basis, but have not logged this to obtain what you are asking. I will ask one of the DNR Officers how things are working, then from that answer I can do some logging.

3284. HazMat Drill Running Now

Yahoo group: StarCom21
Date: 2009-04-09 15:27:52 UTC
From: Mike Curtis (KC)
Topic: 3284 Message: 3284

There's a hazmat drill running right now with some StarCom activity - some sort of Hazmat event involving "Toyota Field" command on MABAS (30330) working Oak Lawn Central FD (MABAS Div. 21). Advocate Christ Hospital and Advocated South Suburban Hospital are doing the EMS side of the drill on 4633 with Region 7 hospitals.

On a side note, it appears "Zone A" and "Zone B" on the hospital radios both contain the same "EMS" talkgroup. Hospitals were instructed to make sure they were on "Zone A EMS" or "Zone B EMS" *non-encrypted* :)

I'm going to try not to sound like a complete fool, but bear with me, as I am new to trunked systems and digital scanners.

Using FreeScan and a BCD396XT, I had originally configured StarCom21 as a "P25 Standard System (BCD396XT)". I thought it was the obvious choice. BUT, I wasn't receiving much, and what I did receive sounded choppy and warbly. I was getting pretty disgusted until I had FreeScan download the configuration from RadioReference. (I have an RR subscription). RR has StarCom21 configured as a "Motorola Type II / P25" and the audio is crystal clear now. Could you be having the same issue?

I believe only the law enforcement part of DNR has StarCom radios (for now at least). The local state parks around here are still on VHF .

Their main traffic is handled on the local ISP talkgroup (xx-Frank-yy units) in the area with the "DNR channels" being used for car-to-car and tactical traffic. Up here in the north, the talkgroups are -

DNR Dist 1 - 1276

DNR Dist 5? - 1277 (The current IDNR law enforcement map doesn't show a D5 anymore)

DNR Dist 6 - 1278

DNR Dist 7 - 1279

DNR Region 1 Detail A - 1280

DNR Dist 2 - 1281

DNR Dist 3 - 1282

DNR Dist 4 - 1283

DNR Region 2 Detail A - 1284

DNR Region 2 Detail B - 1285

3290. Yahoo Groups Maintenance Outage - Monday April 13th

Yahoo group: StarCom21
Date: 2009-04-11 02:38:20 UTC
From: Cris Hanna
Topic: 3290 Message: 3290

http://ygroupsblog.com/blog/2009/04/10/planned-outage-monday-april-13-2009

On Monday, April 13th, 2009 Yahoo! Groups will undergo scheduled maintenance. During this time your group will be unavailable for 30-60

minutes.*

The outage is currently scheduled to begin at 1 pm PT, 8 pm GMT. At this time, ¼ of all Yahoo! Groups will become unavailable while the team services these groups. Once maintenance is complete on that ¼ of Groups, they will be made available again, and the next ¼ will become unavailable until all of the groups have been serviced.

In total the maintenance period should last around 5 hours, with the maintenance concluding around 6 pm PT, midnight GMT.

While your group is being serviced, all features of your group, including messages, photos, attachments, etc. will be completely unavailable. However, once your outage time concludes, your group and all of its features should return and any messages that were posted to the group via email during this downtime will be sent out. Please note that your group□s outage should only last around an hour.

In an effort to better communicate to all of you, a blast message will be posted to all groups starting today and continuing on through April 13th, 2009, linking to this post. This message is visible on all groups to all members and moderators.

3292. New Uniden 396XT on Starcom

Yahoo group: StarCom21
Date: 2009-04-14 18:28:31 UTC
From: dataman60435
Topic: 3292 Message: 3292

Has anyone in Northern ILL purchased this new scanner and can report how well it tracks on Starcom Digital....Thank You....PS: On the previous post the 2050 scanner does NOT work on digital, it will not hear McHenry Co ....

3293. Statewide Communications Interoperability Plan (SCIP)

Yahoo group: StarCom21
Date: 2009-04-14 18:28:20 UTC
From: Kevin O'Rourke
Topic: 3293 Message: 3293

Illinois' first annual Statewide Communications Interoperability Plan (SCIP) was issued on April 1, 2009 and is now available at http://www.state.il.us/iema/SCIP.asp . Of particular interest to scanner listeners are chapters 3 and 4, which contain quite a bit of frequency information - including the zone/mode layout of Illinois Terrorism Task Force (ITTF) talkgroups and 700/800 MHz interop channels in Starcom 21 radios. Annual reviews/updates to the SCIP will be conducted under the auspices of the Illinois Emergency Management Agency.

A must download and read for any serious Illinois "scannist"!

3294. IDOT Mobile Scale Units

Yahoo group: StarCom21
Date: 2009-04-14 19:10:18 UTC
From: Mark Loewe
Topic: 3294 Message: 3294

Confirmed yesterday that the IDOT mobile scale vans use TG 4476 as "Scales A" and TG 4477 as "Scales B" statewide from what I was told. I had them working a detail in my town and personally checked the radio.

Mark

3296. Re: [StarCom21] New Uniden 396XT on Starcom

Yahoo group: StarCom21
Date: 2009-04-15 01:34:06 UTC
From: Rich Carlson
Topic: 3292 Message: 3296

I have been using a 396XT for a week or so on StarCom21 and it seems to work better than the 396T and 996. It seems to work just about as well as the PRO106 on the simulcast sites up here. I have not yet been to a single site area yet, but maybe this week I will get out and try it there.

3297. Programming Question

Yahoo group: StarCom21
Date: 2009-04-15 02:44:55 UTC
From: rehmj@sbcglobal.net
Topic: 3297 Message: 3297

I am new to this group but not new to scanning but would really like some basic help with programming my new digital scanner with StarCom 21. Without having to read all 3300 plus postings, is StarCom considered a multi site system? And is a site the same as a tower location?

I live in St. Louis and am right across the river from St. Clair and Madison counties. Do I program all the sites in those two counties to hear everything locally or is there another trick.

I will eventually figure this out I am sure.

Thanks
jeff

3298. RE: [StarCom21] Programming Question

Yahoo group: StarCom21
Date: 2009-04-15 03:55:40 UTC
From: Cris Hanna
Topic: 3297 Message: 3298

Hey Jeff

I'm in Belleville

I have the St Clair County Towers in one Scan Group, excluding the Multi Cast 359 (which is actually the Sheriff's system), and the Madison County towers on a different scan group. Then I have a 3rd Group with just tower 359 for St Clair county Sheriff and municipalities.

Hope that helps a bit. Which scanner do you have? Do you have a subscription to Radio Reference?

Depending on what part of St Louis you might not hear much. I work in Creve Coeur and once I'm past Busch Stadium on 64 the Metro East Systems are lost. I might occasionally pick up some traffic in certain other areas

Cris

Topic: 3256 Message: 3299

Today I went up the road from Harvard to the countys far north tower to adjust because I am in the weeds too. If you look at motoarola's website it says there is a guarantee that they will work inside buildings for certin countys. The tower is .32 miles on Hebron Road East of Rt. 14. I have a Uniden. So I'm not shure the set up diffrence from Pro 96 and Uniden is? Set the decode and now at home I can hear better but with one bar on the scanner it was hard.

S

I have uploaded Pro96Com version 1.9.0 to the web site at
http://www.psredit.com

Version 1.9.0
---

* Added support for the output from the Anritsu S412D monitor for
decoding the control channel data stream.

* Added support for the April 2009 edition of the RadioReference.com
CD-ROM. Backward compatibility with the October 2008 edition as
well. Pro96Com will detect the version of CD-ROM automatically.

Mike

3308. Radio Reference Mobile Interface updates

Yahoo group: StarCom21
Date: 2009-04-26 17:41:11 UTC
From: Terry (SC21)
Topic: 3308 Message: 3308
Attachments: 1 described; binary payloads are missing from this source WARC

RadioReference.com gets better every day.

They are there to provide the users with what they want.

Comments are always welcome and encouraged.

So are new ideas and ways to make things better for all!

Mobile Interface - New Features for 4/24/2009

New features have been rolled out for the mobile interface at:

RR Mobile (http://m.radioreference.com)

1) Retrieve Frequencies/Information based on Zip Code (US Only)
2) Frequency Search by State
3) Additional frequency details display for individual frequency entries (inputs,etc)
4) System ID and Custom Frequency Table information now available for trunked systems.

I've got more features and functionality planned - but these are some of the more highly requested updates that we rolled out today.

Enjoy!

3310. TGs Programmed in SC21 Hospital Radios

Yahoo group: StarCom21
Date: 2009-04-27 20:32:12 UTC
From: Kevin O'Rourke
Topic: 3310 Message: 3310

The following TGs are programmed into Starcom 21 radios in Illinois hospitals:

PUBLIC HEALTH 30332
EMS 4633
IMERT 1 16465
IMERT 2 16466
RED CROSS 4645
PH ROCKFORD 4626
PH PEORIA 4627
PH EDWARDSVILLE 4628
PH MARION 4629
PH CHAMPAIGN 4630
PH BELLWOOD 4631
PH WEST CHICAGO 4632
EMS R1 4634
EMS R2 4635
EMS R3 4636
EMS R4 4637
EMS R5 4638
EMS R6 4639
EMS R7 4640
EMS R8 4641
EMS R9 4642
EMS R10 4643
EMS R11 4644
IDPH ANNOUNCE (no TG programmed yet)

- The "PH" TGs are IL Department of Public Health (IDPH) region talkgroups.

- The "EMS" TGs are IDPH Emergency Medical Service region talkgroups (they do not match the regular IDPH regions).

- It has been reported that the ANNC and EMS regional talkgroups are full-time encrypted.

3311. Re: Andersen [StarCom21] Unidentified TRSs-

Yahoo group: StarCom21
Date: 2009-04-28 22:05:04 UTC
From: Michael Leoni
Topic: 3311 Message: 3311

Anderson LLC might be mispelled (s/b Andersen). If it is what I think it is, the entity is one of the last surviving legal entities of Arthur Andersen and at the only company-owned location left - the St. Charles training center. Having been there for training many times I recall conventional UHF being used. Apparently visitor occupancy supports an LTR trunking system upgrade. Now called the Q Center and formerly Center For Professional Education, it is located at 1405 North Fifth Avenue in St. Charles, IL. On-site radio traffic would include security, maintenance, hospitality, administration, etc. like a medium sized resort. Of the few visible antennas is one atop the Q Tower - the tallest building on campus, about seven stories tall.

I hope this helps.

3313. SC21 TG20, Livingston PD

Yahoo group: StarCom21
Date: 2009-04-30 18:49:40 UTC
From: Terry (SC21)
Topic: 3313 Message: 3313

Heard what appeared to be Livingston PD, located in northern Madison County using TG 20, radio IDs of 7104 & 7105).

They were testing signals to the "Airport", Bethalto, into downtown Staunton and back to the "strawberry patch".

At one point, they said "now what are the people with scanners going to do, they'll be upset they can't hear us. Oh well! Yeah, it will probably be a few years until they make some that can scan this."

3314. Starcom 21 Traffic Related To Anti-Viral Stockpile Distribution?

Yahoo group: StarCom21
Date: 2009-04-30 20:15:59 UTC
From: Kevin O'Rourke
Topic: 3314 Message: 3314

A press release http://tinyurl.com/cfczc2 was issued this afternoon by the Illinois Department of Public Health (IDPH) which says, in part;

"Several state agencies and the Illinois National Guard currently are assisting with the receipt and repackaging of anti-viral medications and medical supplies from the federal Strategic National Stockpile (SNS), which began arriving in Illinois on Wednesday. Kits containing the supplies will be shipped to local health departments and hospitals throughout the state later today, with distribution expected to continue through the weekend." The release goes on to say "Personnel and equipment from the following agencies are involved in the processing and distribution operation: IDPH, IEMA, the Illinois State Police (ISP), the Department of Central Management Services (CMS), the Illinois Department of Transportation (IDOT), the Illinois Department of Corrections (IDOC) and the Illinois Department of Human Services (DHS). In addition, approximately 200 soldiers from the Illinois National Guard are assisting with the operation as part of a training exercise."

In addition, a Peoria radio station's website has a blurb saying that stockpile supplies are being shipped to downstate health departments from the facilities of an East Peoria logistics firm.

Earlier this afternoon there was traffic on SC21 talkgroup ITTF INC-1 (30332) involving "Peoria IDOT Command" that might have been related to these operations. I would imagine that there might be more traffic on SC21 and other freqs (county health department and emergency management freqs, etc.) related to these operations in the coming days.

Maryville Police: Dispatch

Law Dispatch

Maryville was formerly on the Madison County Transit EDACS TRS, which they appear to be silent on now.
Just heard the dispatcher tell a unit to switch to "low band, the old VHF radio system" and now is some traffic on there.
The frequency is 155.88 simplex, using a 146.2 PL.

Bethalto was formerly on VHF, the old repeater appears to still be on the air.

The Edwardsville Tower seems to be getting the most use, although I'm sure the Bethalto units are probably hitting the Mt Olive and Godfrey sites.

There have been multiple issues in the last couple days with Bethalto mobiles garbling, heard that Wireless USA was being called out.

This brings Madison County up to multiple law agencies using Starcom21. (Madison County Sheriff, Glen Carbon Police, Troy Police, Bethalto Police, Maryville Police and a few very small municipalities dispatched by the Sheriff's Department, with only 1 or 2 cars)
*Note even the area where all these cities are are nearly connected, with the exception of Edwardsville Police, which are NOT using SC21.
The updated their UHF system a couple years ago with multiple receiver sites.

Livingston Police officers, just NE of Worden were testing out SC21 a few days ago on TG 20.

The 2 largest PD's in the County, Alton & Granite City are still using their VHF Repeaters. Collinsville PD is also still using their UHF repeater.

Madison County is the most populous county, just ahead of St Clair in Downstate Illinois (south of Chicago Metro areas)

Remember, St Clair County was the first SC21 system to go on the air and nearly ALL agencies in the county use their simulcast system.

- Cook County

- DuPage County

- Lake County

- Will County

- Kane County

- Winnebago County

- McHenry County

- Madison County

- St. Clair County

- Sangamon County

The Greenville (Bond County) site is still not on the air.

I've used pro96com on all the area towers yesterday and there have been NO changes to control channels on any of the Metro East towers.

Another note, Ameren (Illinois Power) has canceled nearly all their FCC licenses used in their old Motorola 800 MHz Trunked System.
They have been on STARCOM21 for some time now.

Terry

3317. Starcom21 Rebanding License Modifications

Yahoo group: StarCom21
Date: 2009-05-06 02:59:53 UTC
From: Terry (SC21)
Topic: 3317 Message: 3317

Be on the look out for these changes, I have not had time to review any of them yet.

3318. Re: [ScanIllinois] Starcom21 Rebanding License Modifications

Yahoo group: StarCom21
Date: 2009-05-06 13:11:48 UTC
From: Jack Waterman
Topic: 3317 Message: 3318

Here's the pertinent attachment text:

Attachment to State of Illinois application for 800 MHz rebanding:
The attached application requests the addition of the new NPSPAC frequencies that correspond with the pre-rebanding NPSPAC frequencies on this license. This request is part of the state's rebanding effort and was approved by Sprint/Nextel and the Transition Administrator. Any questions regarding this matter can be directed to Jeff Sexton, who is listed as the contact person for this application.

Be on the look out for these changes, I have not had time to review any
of them yet.

3319. MPSCS Again

Yahoo group: StarCom21
Date: 2009-05-06 15:14:12 UTC
From: Jack Waterman
Topic: 3319 Message: 3319

It must be the weather! MPSCS Site 3-004 (in the new Radio Reference nomenclature) is BOOMING in on my 996T here in far northeast Lake County. This is Sumnerville, Berrien County, Michigan. I have SC-21 Site 120 [McHenry County Simulcast] programmed as Control Channel Only, but I have never heard a single McHenry County transmission. Maybe I should just admit defeat and delete that system....

3320. Re: [ScanIllinois] Starcom21 Rebanding License Modifications

3321. RE: (CARMA) MPSCS Again

Yahoo group: StarCom21
Date: 2009-05-06 22:02:28 UTC
From: John Zelz
Topic: 3319 Message: 3321
Attachments: 2 described; binary payloads are missing from this source WARC

Jack,

Not sure where you are located exactly, but the McHenry County system is working just fine. There is a lot of traffic from all sorts of departments, State Police, Tollway, etc. It could be that you may not be able to hear the system where you are, or, that your programming may be wrong.

As an aside, the "other" McHenry County system Site 146, is also live with the VHF system patched in, along with live P25 traffic from the county departments that have transitioned on to the system.

Hope this helps.

John

Subject: (CARMA) MPSCS Again

It must be the weather! MPSCS Site 3-004 (in the new Radio Reference nomenclature) is BOOMING in on my 996T here in far northeast Lake County. This is Sumnerville, Berrien County, Michigan. I have SC-21 Site 120 [McHenry County Simulcast] programmed as Control Channel Only, but I have never heard a single McHenry County transmission. Maybe I should just admit defeat and delete that system....

3323. Bunch of New Talkgroups - IDoT?

Yahoo group: StarCom21
Date: 2009-05-07 22:18:52 UTC
From: Mike Curtis (KC)
Topic: 3323 Message: 3323

Had a bunch of new talkgroups pop up this afternoon on T134 (Ottawa)

1409

1410

1415

1416

1417

The radio IDs were 3630xx. They cycled through the Dist 17 ISP talkgroups as well as some Dist 7 talkgroups and ITTF ones. The IDoT units in Chicago use radio IDs in the 360xxx range so I'm wondering if these may be some IDoT talkgroups?

3324. Re: (CARMA) ISP data/PDTs...StarCom21?

Yahoo group: StarCom21
Date: 2009-05-08 20:31:52 UTC
From: Terry (SC21)
Topic: 3324 Message: 3324

"As far as I know", they are still using IWIN for their MDCs/MDTs.

They are in conjunction with Verizon Wireless and work separately from SC21.

NOW, there lots of "PvtData" (via pro96com) on the sites around the metroeast, I'm assuming that possibly Ameren is using the system for their in-truck computers and possibly some other area agencies, like those in St Clair County.

JUST a partially educated guess.

Good question!

Terry

Radio Dude wrote:

Does the Illinois State Police use their P25 channels for data/PDTs? I forgot where, but I heard somewhere that you could use P25 to support an IP network, and was wondering if ISP combined it's voice & data to strictly StarCom? Or if they still use some conventional channels for data. Sorry if it's a dumb question.

Jon

3325. City of Bloomington to test Starcom21 radios for 90 days

Yahoo group: StarCom21
Date: 2009-05-08 22:03:16 UTC
From: citrus801
Topic: 3325 Message: 3325

City of Bloomington to test 8 Starcom21 radios over the next 90 days at the request of the DHS:
http://www.pantagraph.com/articles/2009/05/08/news/doc4a04847f0352c700079203.txt

3326. Re: City of Bloomington to test Starcom21 radios for 90 days

Yahoo group: StarCom21
Date: 2009-05-11 02:13:18 UTC
From: citrus801
Topic: 3325 Message: 3326

The printed copy of the article had more details not discussed in the online version. It said the City is looking at long term plans to replace the old radio system installed in 2002. Also mentioned was that if Bloomington wanted to rejoin METCOM, they would have to join Starcom21. The fact that Bloomington is looking into Starcom21 is not directly related to the idea of them rejoining METCOM or the communication issue last year at the State Farm standoff the article said.

3328. Re: [StarCom21] Re: (CARMA) ISP data/PDTs...StarCom21?

Yahoo group: StarCom21
Date: 2009-05-12 14:37:58 UTC
From: Donald Peters
Topic: 3324 Message: 3328

The Illinois State Police is on the IWIN network for data communications. While SC21 does support a data channel, the bandwidth is not sufficient to supply the needs of the MDTs. I hope this helps.

--- On Fri, 5/8/09, Terry (SC21) <RadioReference@...> wrote:

"As far as I know", they are still using IWIN for their MDCs/MDTs.

They are in conjunction with Verizon Wireless and work separately from SC21.

NOW, there lots of "PvtData" (via pro96com) on the sites around the metroeast, I'm assuming that possibly Ameren is using the system for their in-truck computers and possibly some other area agencies, like those in St Clair County.

JUST a partially educated guess.

Good question!

Terry

Radio Dude wrote:

Does the Illinois State Police use their P25 channels for data/PDTs? I
forgot where, but I heard somewhere that you could use P25 to support an
IP network, and was wondering if ISP combined it's voice & data to
strictly StarCom? Or if they still use some conventional channels for
data. Sorry if it's a dumb question.

Jon

3331. Starcom21 Notes

Yahoo group: StarCom21
Date: 2009-05-19 16:28:40 UTC
From: Terry (SC21)
Topic: 3331 Message: 3331

Today, for some reason Glen Carbon PD (Madison County) is dispatching on TG7316 which has been known to be Madison County Sheriff F-3 (car-to-car/alternate dispatch)

Also, there is a unspecified detail working in the Madison County area on TG 17019, District 12 Detail A, but all the units are district 11 units and one is a railroad PD unit from St Clair County.

Terry

Just heard the nightly test page for Keyesport Fire Department on TG7876.

Keyesport is located in SW Bond County in the Metro East area.

This is assumed to be, at this time, a simulcast of 154.13 162.2 PL.

I checked pro96com earlier in the day, and still detect no activity on
the (assumed) future Greenville SC21 site.

Also, it appears that no sites in this area have been through rebanding
yet, although I did hear a couple radio techs talking about rebanding
some portables and having problems with the encryption keys. (plugs)

From: citrus801
Topic: 3333 Message: 3333

Could you please look at the Starcom21 site map and note sites that have changed since the map was made? I want the map to be accurate.

3335. Starcom 21 TG 1601

Yahoo group: StarCom21
Date: 2009-05-20 17:05:34 UTC
From: Kevin O'Rourke
Topic: 3335 Message: 3335

Hearing unknown user this morning (5/20) on TG 1601 via site 101 (DuPage County). Sounds like law enforcement or public safety, possibly at a facility (college or university?). Radio identifiers are in the 500-series. I did hear "JJC" mentioned - possible that this is Joliet Junior College? Anyone else have notes on this TG?

3336. RE: (CARMA) Starcom 21 TG 1601

Yahoo group: StarCom21

From: Mike Curtis (KC)
Topic: 3335 Message: 3336

I was hearing them on T125 (Morris) this morning as well and heard mention of "Zone 8"

Radios were affiliating on T125 with IDs in the 46xxx range and a base radio ID of 410685 which is "close" to other radios assigned in Will County (between Will County Health Dept, Joliet FD and some Plainfield radios)

3337. Many Starcom21 Pro96com Tower.txt files uploaded

Yahoo group: StarCom21
Date: 2009-05-21 01:26:09 UTC
From: citrus801
Topic: 3337 Message: 3337

Many Starcom21 Pro96com tower files have been uploaded. These are sites along I74 and were collected within the last couple of weeks. I wasn't able to run Pro96com for very long on most of the sites due to collecting them while traveling.

http://groups.yahoo.com/group/StarCom21/files/PRO96COM/100-Series/Tower0103.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/100-Series/Tower0110_.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/100-Series/Tower0145.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/200-Series/Tower0202_.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/200-Series/Tower0203_.txt

http://groups.yahoo.com/group/StarCom21/files/PRO96COM/200-Series/Tower0206_.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/200-Series/Tower0207_.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/200-Series/Tower0210.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/200-Series/Tower0216.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/200-Series/Tower0220.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/200-Series/Tower0221.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/200-Series/Tower0229_.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/200-Series/Tower0231.txt
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/200-Series/Tower0237.txt

I had to change the filename for some since old tower files already existed for those sites. Could kd4ygg or the group administrator remove the old 2006 files for the sites with the underscore after them since we now have files that are three years more recent?

3339. Granite City Police now on SC21 (Madison County)

Yahoo group: StarCom21
Date: 2009-05-23 22:33:03 UTC
From: Terry (SC21)
Topic: 3339 Message: 3339

Sorry, forgot to publish this earlier in the week.

Granite City Police department, in Madison County, is now on Starcom21,
what appears to be full-time.

SC21 http://www.radioreference.com/apps/db/?sid=2324

The only TG's I've seen so far are

7921 1ef1 D GranitCtyPD Granite City Police: Dispatch Law Dispatch
7922 1ef2 D GrCty PD c2c Granite City Police: Car-to-Car Law Tac

But often it seems the next TG, as 7923 may be, will be Encrypted.

The VHF Repeater system is still up and has been used very little lately.

Terry

3340. Help ! - Want to program my XTS 2500 but need system info !

Yahoo group: StarCom21
Date: 2009-05-24 19:05:09 UTC
From: vxstd
Topic: 3340 Message: 3340

I would like to program my XTS 2500 but need system info for starcom
Everything I see online seems to only be available to monitor via a scanner, I would like to monitor via my XTS 2500.

Can anyone help with system IDs connect tone and proper talk group IDs for the XTS radios ?

Need info for lake county and chicago sites

Thanks in advance...
Bear

3343. Edwardsville Police now simulcast on SC21 (Madison County)

Yahoo group: StarCom21
Date: 2009-05-28 21:03:21 UTC
From: Terry (SC21)
Topic: 3343 Message: 3343

TG 7953 Encrypted, no radio IDs detected
TG 7951 was Emergency Button Trigger, sounded like the Edwardsville dispatcher but not sure, radio ID of 0, which appears to happen on Emergency Button TGs around here

-------- Original Message --------

Edwardsville Police Department is now being simulcast on TG 7954, Radio ID 792004.

Also, RID 792002 had previously been heard on an I-REACH patch.

This could be for Glen Carbon PD to monitor and/or use for mutual aid with Edwardsville or could be for Southern Illinois University at Edwardsville.

I did hear the Zone 3 Radio techs talking Tuesday evening about picking up new equipment at Glen Carbon PD on Wednesday morning, not sure if this is associated or not.

Other notes
During the severe weather and torrential rain we've had in the last few days
--Godfrey Site (355) was down for a while
--East St Louis (323) was down for a while
--D11 Collinsville and D18 Litchfield had some obvious power issues last night at their main terminals, they were operating on portables to dispatch units.

You really aren't able to do what you are looking to do with the XTS.
For that radio to be able to track the Starcom system, it would have to "Affiliate" with the system.
That means it would need to be programmed with a valid Radio ID.
Since Starcom is a closed system for Public Safety users, Radio ID's are assigned & activated individually.
The only way you would get a Radio ID is to clone an existing ID, basically steal a valid ID.
That would be considered theft of service, plus it probably falls under some sort of computer crime law also.
And since cloning ID's is an officer safety issue for the user whose ID was stolen, ISP and Motorola would no doubt take a dim view of that and start tracking the whereabouts of the stolen ID..

Best advice: Stick with the scanner, it works better for your use, and causes less trouble..
By the way, how did you get ahold of a Starcom-capable portable?
Art.

3346. More Rebanding Applications Granted

Topic: 3346 Message: 3346

Reminder....

Easy way to help yourself if your local towers may reband.... simply take the current control channel, like 866.25 and subtract 15.00 from it.

Technicialy, the new control channel would be 851.25.

Add this too your scanner and just wait!

Then be sure to let us know, either by

1) the Submit button on RadioReference.com
http://www.radioreference.com/apps/submit/?sid=2324
2) the Rebanding thread on RR Forums http://www.radioreference.com/forums/illinois-radio-discussion-forum/141955-rebanding-starcom21-post1082636.html

Even if you have all of the information available, you cannot program trunked system info without a system key file for the starcom system. And to be blunt, you ain't going to get one.

It is literally like a key that lets you on to the system and they are closely guarded to prevent unauthorized access or tampering with a system.

Even if you have the software, the hardware and all of the information, it is just not possible without knowing someone or breaking the law.

I am way into motorola radios and I still use a scanner for trunked stuff.

It has been mentioned before the system key is only for tx on the system. You don't need one for scanning a system with a radio like above. But with scanners around why bother except for the cool factor.

Using a SC21 radio for scanning, first off you just can not go into a Motorola dealer a purchase the radio. Here in Illinois EVERY radio is kept track of, what department has the radio, etc. If someone manages to obtain one, probally stolen or by false representation, all I can say is it worth jail time!! Close invetory is kept of every radio made, so if an individual is able to purchase one ??, now comes the what are you going to use it for ?? There is a unknown factor that can render the radio useless, and you do not need to TX. Being cool and having one,even if you do manage to program the radio, is going to cause you, yourself problems in the fact that someone is going to ask questions, which you may not want to answer.

If I'm not mistaken, to monitor a P25 system on a P25-capable radio (any P25-capable 700/800 MHz will work on StarCom, or should, not just specific Motorola radios), you need to affiliate with the system. That's not the case on older Type 1/Type 2 Motorola systems - you could set the radio to not affiliate but yet still trunk track.

That said, and to echo what others have said here, the StarCom capable scanners will provide a more pleasurable experience for you :) Scan lists on Motorola trunking radio, in my experience, are tiny compared to what you get with a scanner plus, if you were able to get your radio affiliated with SC21, you don't have to worry about getting your scanner "bricked" by the radio techs ;)

I'll add this and because yes we do have 3 SC21 radios at EOC, and can use them, but it seems that not everything is programed into all the RADIOs, like one can do with a scanner, a SP Tooper who I train with, asked the other day why I could hear other Districts that he only has one channel for, and all because of the Scanner being able to work what ever you set it up for. It is my understanding that some of the Re-Banding is done remote, so if you have hacked another radio, and both are on at the same time, I wonder what will happen. Let's hope all the discussion has encouraged the one person to NOT hack a radio, just to be COOL. So trust me and others, that if you do and are out and around, questions will be asked !!!!

The CARMA StarCom21 Programming file has yet to be updated for Site 146 (McHenry County), I hope to have it finished this weekend or soon thereafter.

If you have the McHenry County freqs in correctly (remember that Site 146 has been reband ed) you should pick it up just as well as the Site 120 which are located at the same sites for the most part.

From: SRehm24416@aol.com
Topic: 3278 Message: 3357

I have questions on how to program the St. Clair County system in my scanner. I have read that it?is a "seperate" system from the regular StarCom but "some" TG's use the StarCom "and" St. Clair systems.

1. Are there any St. Clair County specific?TG's? In other words, they only work/operate with the St. Clair County sites. If so then I can program those TG's under that system.

2.?Are there?TG's listed for the St. Clair County system that?also use the regular StarCom sites? If so can I program the St. Clair County system along with the regular StarCom sites and still work correctly?

I have heard of serious reception problems with St. Clair County, even within the county itself, so I don't want to cause problems with my other relativly good reception of StarCom. I have even heard that some people program each system seperately because of the continued problems with reception.

Hope this isn't too confusing. I just want to get it to work better.

Radio Reference lists St. Clair county as follows: "The St. Clair County ETSB Trunked System Is A Sub-system Of STARCOM21 and is detailed on the main STARCOM21 page"

There are actually 12 sites within the St Clair County system and they all use the same set of control channels etc. It's a simulcast system as well for most VHF and UHF systems in the county.

If you program site 03-059. You should be getting all Talk groups in St Clair County

I have one Scan List for District 11 which includes St Clair County and I don't include site 03-059 in that TSYS and as far as I know I'm getting everything. Likewise I have several scan lists for St Clair County (Sheriff, Fire, Other Law Enforcement, etc) and I only include 03-059 and not the other SC21 sites in the county.

Terry or a couple other's may have different thoughts, but this seems to be working for me.

I sent a message to the Illinois forum on RR to Terry but I have not checked it yet. I kinda thought that the STCCo TG's were only on the STCCo site (359) but wasn't sure. This multi site thing, as well as learning the new 396XT, has really thrown me a curve. I thought 30yrs of scanneing would help. I now believe if I was fairly new to scanning it would be more of a benefit. I said when I got my new scanner that July would be the month that I would feel comfortable using the new scanner. I am thinking I was very close to being right.

I have questions on how to program the St. Clair County system in my scanner. I have read that it is a "seperate" system from the regular StarCom but "some" TG's use the StarCom "and" St. Clair systems.

1. Are there any St. Clair County specific TG's? In other words, they only work/operate with the St. Clair County sites. If so then I can program those TG's under that system.

2. Are there TG's listed for the St. Clair County system that also use the regular StarCom sites? If so can I program the St. Clair County system along with the regular StarCom sites and still work correctly?

I have heard of serious reception problems with St. Clair County, even within the county itself, so I don't want to cause problems with my other relativly good reception of StarCom. I have even heard that some people program each system seperately because of the continued problems with reception.

Hope this isn't too confusing. I just want to get it to work better.

Topic: 3278 Message: 3360

I can’t begin to tell you how many variations of the programming of scan lists, TSYS objects, etc I’ve been through since I got my 600 about a year ago. And I have a two way dealership as well (conventional radio only) and still took some getting used to.

Keeps us on our toes.

Subject: Re: [StarCom21] St. Clair County

I sent a message to the Illinois forum on RR to Terry but I have not checked it yet. I kinda thought that the STCCo TG's were only on the STCCo site (359) but wasn't sure. This multi site thing, as well as learning the new 396XT, has really thrown me a curve. I thought 30yrs of scanneing would help. I now believe if I was fairly new to scanning it would be more of a benefit. I said when I got my new scanner that July would be the month that I would feel comfortable using the new scanner. I am thinking I was very close to being right.

Jeff

0D

Radio Reference lists St. Clair county as follows: “The St. Clair County ETSB Trunked System Is A Sub-system Of STARCOM21 and is detailed on the main STARCOM21 page”

There are actually 12 sites within the St Clair County system and they all use the same set of control channels etc. It’s a simulcast system as well for most VHF and UHF systems in the county.

If you program site 03-059. You should be getting all Talk groups in St Clair County

I have one Scan List for District 11 which includes St Clair County and I don’t include site 03-059 in that TSYS and as far as I know I’m getting everything. Likewise I have several scan lists for St Clair County (Sheriff, Fire, Other Law Enforcement, etc) and I only include 03-059 and not the other SC21 sites in the county.

Terry or a couple other’s may have different thoughts, but this seems to be working for me.

Topic: 1977 Message: 3364

Please join us for the next CARMA Friday Nighter at 7:00 PM at the Tri-State Tollway's Irving Park Oasis just south of O'Hare on I-294.

We will be viewing a demonstration of the AirNav Radar Box as well as the new Uniden 396XT full-featured handheld scanner.

Some of us meet about 5:00 PM at the Barnaby's Pizza, 636 E. Touhy Av (near Wolf Road) for vittles before heading off to the Oasis for the get-together.

3367. Updated StarCom21 Programming Files

Yahoo group: StarCom21
Date: 2009-06-05 01:12:00 UTC
From: n9jig
Topic: 3367 Message: 3367

I have posted the new updates to the StarCom21 Programming Files for the Uniden BC996T scanner to the CARMA Profiles Page at www.carmachicago.com/profiles.

These files are in ARC996 and UASD996 formats, and can also be imported by FreeScan and other applications. For those users of the new Uniden BCD396XT you can also import these files with ARC-XT or FreeScan.

These files have the latest frequency channels, updated GPS locations and up-to-date talkgroup lists. Due to the 996's 250 TG limit, I restricted the talkgroup lists somewhat, only including ISP, ITTF, and the McHenry, Champaign, McLean, Madison and St. Clair County lists.

Feel free to alter these files as you see fit, the Master Talkgroup list from the CARMA StarCom21 Profile is set up to be cut and pasted directly into ARC996 and other applications.

You'll only receive traffic on the site you're listening to when there's a radio affiliated with the given talkgroup. If there's not a radio affiliated with Patrol South on your site then you won't receive traffic on that talkgroup.

I'm not 100% sure of this, but I believe that since the Patrol South TG is not a "statewide" or "zonewide" TG you'd only hear it if a radio is on that TG and affiliated with the site that you're monitoring (which I'm guessing is Site 108). Since the tollways closest to Lake County (Jane Addams, Edens Spur and Tri-State north of the Cermak Rd. toll plaza) all use the Patrol North TG I'm guessing that you might not hear much traffic on the Patrol South TG unless you're able to hear Sites 101, 102 or (possibly) 115. Hope that helps...

You'll only hear that talkgroup if a car is "signed in" to your local repeater with that talkgroup enabled in his/her radio. It's just like being able to hear another district... if one car has it enabled, then you'll hear it.

3379. Site neighbors

Date: 2009-06-12 17:14:39 UTC
From: mvhyden61
Topic: 3379 Message: 3379

I've been meaning to ask this for a while: On the RR Starcom21 page, some sites have neighbors listed and some don't. Can someone explain neighbors and is there some special programing involved when using them?

3380. Re: [StarCom21] Site neighbors

From: Terry (SC21)
Topic: 3379 Message: 3380

Basically, the ones listed are because someone has submitted the
neighbor info.

Most off of them have "neighbors". This does not affect you
programming, but may aid you in knowing what towers are close to another
tower.

You may be able to find more information here: (I don't have time to
look right now)
http://wiki.radioreference.com/index.php/Project_25

See http://www.freqofnature.com/SmartZone101.html for more info (this
is for a motorola smartzone system, not for a p25 system)

Topic: 3379 Message: 3381

Some trunked radio control channel decoders such as Pro96Com identify the Neighboring Site's control channels, this data is included in the data stream. The radios use this to more quickly scan to the neighboring site when in the field, and the strength of the signals from the current and neighbor sites is compared.

3383. New TGs - 1701, 1705, 1707 - Rockford?

Yahoo group: StarCom21
Date: 2009-06-14 02:44:55 UTC
From: Mike Curtis (KC)
Topic: 3383 Message: 3383

Overnight on T111 (Rockford), I logged some new talkgroups - 1701, 1705, and 1707. The radio IDs affiliating were in the 290xxx series. I also noticed that Rockford FD affiliated with a couple of the talkgroups so I'm guessing these might be the Rockford PD talkgroups coming on-line?

3384. Peoria simulcast possibly rebanded

Yahoo group: StarCom21

3386. North Cook County Starcom 21 Site Rebanded

Yahoo group: StarCom21
Date: 2009-06-22 18:38:52 UTC
From: Kevin O'Rourke
Topic: 3386 Message: 3386

It appears that Starcom 21 site 115 (North Cook County) has been (or is in the process of being) rebanded. Current control channel is 851.9375, and Moto techs have been heard using TG 1.

Does anyone know if there is anything special that I will have to do programming-wise on my BCD-396T to get it to properly track these new freqs?

3387. Dist 12 System Failure

Yahoo group: StarCom21
Date: 2009-06-22 19:04:15 UTC
From: Mike
Topic: 3387 Message: 3387

ISP Dist 12 just advised they have lost all radio communications and have a total system failure, advising all units to move to highband, and asking any units to advise other district units without highband via other methods.

Unsure if this is a dispatch failure at Effingham or if this is a system failure

3388. Re: [StarCom21] Dist 12 System Failure

From: Terry (SC21)
Topic: 3387 Message: 3388

starcom21 is operating just fine right here, at least right now, in District 11.

But last night, there were 2 sites down (Current, Failed in pro96com), Washington Park and another one in the area.

From: Kevin O'Rourke
Topic: 3386 Message: 3389

Just changing the freqs in my '396 seems to be working fine for site
115. I seem to remember that there was something else I had to do when
NWCD was rebanded - perhaps that was before the most recent firmware update?

3390. StarCom21 Programming Hint

Yahoo group: StarCom21
Date: 2009-06-23 00:50:30 UTC
From: n9jig
Topic: 3390 Message: 3390

Due to the many StarCom21 sites being rebanded here is a suggestion to make sure you don't miss anything:

On any site you monitor that has any freqs listed between 866 and 869 MHz. enter the corresponding 851 thru 854 MHz. channels.

This allows your radio to seamlessly switch to rebanded channels when that site switches, you will have to do nothing.

The extra channels in your scanner won't hurt anything and you can clean them up later when this whole mess is all over.

This trick will work on any Motorola trunked system that has channels from 866 to 869 MHz. Sorry, but you will need to manually change any EDACS or LTR systems in this range when they change.

Good info and it does work, I maybe wrong but with the EDACS system I think the reason you need to change the data, is that they need to be in a certain order to make the control channel work.

yes, there are 700 mhz sites, that have 800 mhz voice channels,
belonging to the power company ameren.

You'll see the frequencies pop up on the display and verified with pro96com.

My question is, the info below from pro96com, appears to be from ONE
site.... so that's why my original question.

Yahoo group: StarCom21
Date: 2009-06-24 19:50:48 UTC
From: Kevin O'Rourke
Topic: 3394 Message: 3396

All three of the 700 MHz freqs shown do pop up in my 396's display as voice channels when trunk tracking Site 102 (South Cook County) by itself.

I was going to say that I didn't know if an individual SC21 site can utilize both 700 MHz and 800 MHz freqs - but a quick look at the CARMA SC21 profile reveals that a handful of sites are shown with freqs in both bands. Have those sites been confirmed as actually using freqs in both bands? If so, will SC21-capable scanners track those sites properly (i.e. hearing and displaying the freqs in both bands)?

Something new to me.....

Subject: Re: (CARMA) Re: Tower 0115

All three of the 700 MHz freqs shown do pop up in my 396's display as
voice channels when trunk tracking Site 102 (South Cook County) by itself.

I was going to say that I didn't know if an individual SC21 site can
utilize both 700 MHz and 800 MHz freqs - but a quick look at the CARMA
SC21 profile reveals that a handful of sites are shown with freqs in
both bands. Have those sites been confirmed as actually using freqs in
both bands? If so, will SC21-capable scanners track those sites
properly (i.e. hearing and displaying the freqs in both bands)?

Something new to me.....

Unless something major has changed, the 700 MHz frequencies you have in the T115 file are from T101 (DuPage) ... There are SC21 sites that have both 700 MHz and 800 MHz channels, but as of last Friday, T115 wasn't one.

Here's what I have for T101 from Friday -

FileVersion:5

-TowerInfo

#This section is here for information only. With the exception

3400. Radio Reference SC21 site listing

Yahoo group: StarCom21
Date: 2009-06-25 01:57:07 UTC
From: radiostarcom21
Topic: 3400 Message: 3400

Terry,
Why was the site numbering changed?
1-001 instead of 101 and so on?
I believe this has resulted in site numbers not
being used with web importing with the various
radio programming software.

Thanks,
George

Rich,
Try deleting those sites from the System 140 folder, and start over
with a fresh read from pro96com. See if you get the same results.

George

3402. RE: [StarCom21] Radio Reference SC21 site listing

Yahoo group: StarCom21
Date: 2009-06-25 02:06:46 UTC
From: Cris Hanna
Topic: 3400 Message: 3402

I'm using PSREdit500 and they show up just fine.

The change as to do with ISP Zones.zone 1, zone 2 and zone 3

From: StarCom21@yahoogroups.com [mailto:StarCom21@yahoogroups.com] On Behalf Of radiostarcom21
Sent: Wednesday, June 24, 2009 8:57 PM
To: StarCom21@yahoogroups.com
Subject: [StarCom21] Radio Reference SC21 site listing

Terry,
Why was the site numbering changed?
1-001 instead of 101 and so on?
I believe this has resulted in site numbers not
being used with web importing with the various
radio programming software.

Thanks,
George

3403. Re: Radio Reference SC21 site listing

Topic: 3400 Message: 3403

Yes, site 101 is zone 1, site 01.
It's not a ISP zone number issue, it's an issue with
the new numbering system on RR.

George

3404. RE: [StarCom21] Towers 0101 0102 0108 0115

Yahoo group: StarCom21
Date: 2009-06-25 19:35:56 UTC
From: Mike Curtis (KC)
Topic: 3399 Message: 3404

Looks like you have some co-mingled tower files or something for 102 and 115. You may wanna delete those files from the System140 directory ... Here's data from a trip to the city this morning.

T101 -

"01-1924","vd",774.03125,804.03125,139

"01-1964","c",774.28125,804.28125,0

"01-2004","avd",774.53125,804.53125,324

"01-2044","avd",774.78125,804.78125,580

"01-2084","vd",775.03125,805.03125,1695

"01-2124","vd",775.28125,805.28125,1642

"01-2164","vd",775.53125,805.53125,1669

"01-2204","vd",775.78125,805.78125,1728

T102 -

"01-1934","vdi",774.09375,804.09375,481

"01-1974","cvd",774.34375,804.34375,0

Rich,
Try deleting those sites from the System 140 folder, and start over
with a fresh read from pro96com. See if you get the same results.

George

855.23750 is a control channel on T108 (Lake County)

The current list for T115 is

854.98750 (c)

851.43750 (a)

851.93750 (a)

852.88750

853.46250

853.91250

856.23750

3409. SIte-148 Boone County

Yahoo group: StarCom21
Date: 2009-06-29 16:49:17 UTC
From: Jerry
Topic: 3409 Message: 3409

Hello,
If possible, I am looking for some assistance in programming a BCD396XT. I have programmed individual sites into my radio for example: Site 120-McHenry County, Site 146-Illinois State Police, and Site 148-Boone County. The problem that I am having is that I am unable to receive Boone County (Site 148) from my residence in McHenry. I had the radio connected to an outdoor rooftop antenna, and still nothing. Is there another site that I should have in the system or should I combine all three systems into one group? Any assistance would be greatly appreciated.

Jerry

From: Cris Hanna
Topic: 3409 Message: 3410

Well certainly I live in the other end of the state and my PSR-600 is mounted in my vehicle, so take that into account. But depending on many things, I'm not surprised that you are not hearing Boone County.

I live in St Clair County.but I cannot hear some of the towers in Madison County which is adjacent to St. Clair. If I'm in the Eastern part of St Clair County, I can't pick up St Louis's new P25 800 Mhz system.

The Boone County site detailed info is located here

http://www.radioreference.com/apps/db/?action=siteInfo
<http://www.radioreference.com/apps/db/?action=siteInfo&siteId=7523>
&siteId=7523

It has a range of 30 miles, give or take (scanners will always have less range)

So if you are located more than 25 miles from (Toll Plaza 5) on I-90, you most likely won't hear the traffic.

Cris

3413. Peoria Simulcast Tower 237 update

Yahoo group: StarCom21
Date: 2009-06-30 17:27:51 UTC
From: Jason McDowell
Topic: 3413 Message: 3413

Looks like the 2nd control channel has now been rebanded. So you'll have to use both frequencies below for control channels...

867.450 is now 852.450
867.975 is now 852.975

It appears that they now alternate every so often.

Jason

3414. What Should Happen When 1 Site Fails?

Yahoo group: StarCom21
Date: 2009-07-01 00:51:40 UTC
From: Mike Curtis (KC)
Topic: 3414 Message: 3414

So right now T131 (LaSalle) is down (Pro96Com running on T134 shows it as "failed"). The District 17 ISP units are unable to communicate when they are solely in range of T131 (but fine if they are in range of one of the myriad towers around here). When this happens, what should happen? Failsoft? There seems to be some confusion on everyone's part.

The D17 dispatch center has been able to get out all along (even though they're located basically under the T131 tower) so I assume they're "hardwired" into the StarCom network? How does that work? :)

3417. T148 Rebanded & New Freqs Added to T111

Yahoo group: StarCom21
Date: 2009-07-05 05:56:48 UTC
From: Mike Curtis (KC)
Topic: 3417 Message: 3417

T148 (Belvidere) has been rebanded -

853.33750 (c)

853.51250 (a)

853.81250 (a)

851.88750

852.07500

And new frequencies have been added to T111 (Rockford). I believe they're the ones that were licensed not too long ago and believed to be for a separate Rockford tower. As it stands now, this is T111 -

851.41250 (c)

852.38750 (a)

853.38750 (a)

851.26250 (new)

851.71250

852.03750 (new)

852.83750 (new)

853.23750 (new)

853.63750 (new)

853.88750

Also logged some new talkgroups in the 1700 range - 1714, 1715, 1717 ... 1715 and 1717 logged encrypted traffic :(

Check all the users on 155.25 in a radius of say 100 miles. If I just wanted to listen to Dekalb PD. The same is used in Iowa for about seven counties Sheriffs in eastcentral area. Dixon PD uses it with analog and digital. Several PD's in Chicago are has it. It is a very busy freq when conditions are up.

It helps to eliminate interference from other agencies that may be on the same frequency but some distance away that you may not want to listen to. Sometimes a scanner will also pickup noise from a computer or monitor it is near and the PL Tone also helps control that noise.

Along with the Macomb tower (site 224), the Niota tower (site 210) has also been rebanded today with a new CC of 851.9000 MHz.

3425. Rebanding Hints

Yahoo group: StarCom21
Date: 2009-07-07 22:09:01 UTC
From: Rich Carlson
Topic: 3425 Message: 3425

AS we have seen from our members reports several StarCom21 sites have been rebanded recently. The rest will be eventually.

In order not to miss any traffic on your favorite site here is a hint that will help:

On any site that has 866 to 869 MHz. frequencies listed (in the CARMA Profile or on the RadioReference page) assume that the new freqs will be 15 MHz. below and add them to the list of frequencies to be programmed in your scanner. Adding them in before the site gets rebanded will not hurt anything, and when the site changes to the new frequencies you will already have them in your radio.

I will be updating the CARMA Profile next week with all the new rebanded channels and will include the future rebanding channels for those sites that this applies. I will also add them to the CARMA StarCom21 Programming files for the 996 and XT scanners.

Remember that this Rebanding only affects frequencies from 866-869 MHz. Existing freqs from 851 to 866 will not change (with a few occasional exceptions) and 700 MHz. channels are also not affected by this mess. 700 channels however may have a mess of it's own later, but that will be covered when/if this occurs.

Thanks to Terry and all the other CARMA/StarCom21/ScanIllinois and RadioReference members and users for the various updates and be sure to report any changes you find!

John,

When an individual gets finds a tower, transmissions for that units' talk group will come out of that tower. You're probably not hearing skip, only the local tower with those transmissions coming out of it. Think of it similar to the way that the cellular phone system knows where to find you. Your phone looks for a tower on its' home system, say AT&T, and then locks onto that tower. It also keeps track of other AT&T towers in the area in case it needs to switch to get a better signal. Same thing with the Starcom system.

While skip is not unheard of, it probably isn't what you are hearing. If you stop the scan and look at the control channel, it will show you what tower you are hearing. So, unless you get some really good skip, or more likely a condition called ducting, you won't be able to hear most districts off of one site unless there is a unit from those districts locked on to that tower.

This is overly simplified, but should give you an understanding of how the system works.

Good luck,

John

Sent: Thursday, July 09, 2009 4:28 PM
To: StarCom21@yahoogroups.com
Subject: [StarCom21] Starcom Range / Network

I am located in Sangamon County and have a BCD996T that I use to monitor State police communications for District 9.

A little background: My radio is programmed with all Starcom tower sites in the event that I want to go mobile for the day otherwise I use this radio as a base unit.

I have all ISP D-9, DNR R-4, and SOS D-3 ID's programmed into the radio under Quick key #1. All ISP Districts bordering D-9 are on Quick Key #2, and all other ISP Districts beyond that are Quick Key #3. All Quick Keys are turned on.

Currently I have all tower sites locked out (to speed up my scan rate and and mainly because I am not within range of them) with the exception of

Tower 230 Springfield
2-030 2-1E Springfield [Sangamon)

and

Tower 217 Chatham
2-017 (2-11) Chatham [Sangamon]

My antenna receives these two towers perfectly.

Today I am receiving ISP D-9 Springfield, D-18 Litchfield, D-6 Bloomington, D-11 Collinsville, and D-12 Effingham. Last week, I received D-22 Ullin and D-19 Carmi. In the past I have monitored D-20, D-2, D-10, D-02, and so on.

Here are my questions.

#1 Why am I hearing distant sites such as D-22? Is this skip, a normal network of repeaters or is the network being tested or tweaked just for the day then being turned off the next day?

#2 In the future, will I eventually be able to hear most districts by monitoring only one site?

3428. Re: [StarCom21] Starcom Range / Network

Radios will "Affiliate" with the nearest tower (usually) and when a radio that is affiliated with that tower is set to a particular talkgroup that traffic will come out.

Springfield is, of course, the state capitol, and HQ of the State Police. It is not unusual to see cars from all Districts there for training, meetings or conferences, and often they like to listen to their home Districts.

You will only hear a talkgroup if it has a car affiliated with it in the area.

What I have entered is all of the surrounding towers, thus you will hear District 9, why, because there is the Manito tower 4 miles from me and I hear District 9 on it as well as other sites, makes for better listening fun if you enter more sites. Also for the IDNR guys, these people float all over, so you would hear other IDNR cars if you add these also. Reason I say this is because of the pending cuts in man power there will be a shift of who works where, even my guess is that you will hear Dist 8 cars closer to Springfield and Dist 11 and 14 working closer to Dist.9. Just my thoughts, its your scanner.

John,

I have noticed the samething. I live in Virden and work in Springfield. The last few days I have noticed that it seems that I am only picking up just other districts that are transmitting on ISPERN only. I wonder if the the system is interconnecting or patching into surrounding ISPERN channels. I have even noticed recently up to recently the D09 ISPERNS where not transmitting on analog ISPERN just recently too.

3435. Re: [StarCom21] Re: Springfield City application for P25 Frequencies

Yahoo group: StarCom21
Date: 2009-07-14 04:37:22 UTC
From: SC21
Topic: 3151 Message: 3435

/*From the Sangamon County Central Dispatch System website:*/
1/22/09:
StarCom. There was a discussion about start dates for StarCom and what channels will be used by the agencies after StarCom is implemented.

5/20/09:
Motorola/Starcom update:
There was a discussion regarding the Starcom radios. We are waiting for 2 lines that aren't done yet. Motorola is doing an audit on all the equipment and they are still testing the equipment. There was a question regarding when the switch would take effect so the rural departments will know. Center Manager Mark Boughter advised he is going to meet with the sheriff's office to get a date and will let everyone know.

4/15/09:
The update on the Starcom radios is that the T-1 lines are in and working at PSAPII and Motorola is doing testing down there. We have paid the city and 10% of the Motorola.
Chairman Powell advised that the county has the option to apply for a $56,000 grant to help pay for the radio study and this might cover all of it.

3/18/09:
There was a discussion regarding StarCom. Springfield Police Department is projected to go live with StarCom sometime in May after testing is completed. Also, Sheriff Williamson will be distributing StarCom radios to the rural police departments. Every department will be given at least one unit.
Chairman Powell discussed the radio study. There has been a request for bids. A committee of five will oversee the radio study. They will also be looking for grant money to help finance the radio changes in 2012.

New Business:
The ETSD and SCCDS website is now accessible online. You can view it at www.sangamoncounty911.org

/*New Berlin Village Website*/
May 2009:
Chief Nydegger reported that Sangamon County's Dispatching Office is going to start using Starcom
Radios. New Berlin will receive one radio at no expense and will need to purchase another radio. In
addition, when the system goes online there will be a $35/month fee.

3436. Looks Like T120 Was Rebanded

Yahoo group: StarCom21
Date: 2009-07-14 14:25:20 UTC
From: Mike Curtis (KC)
Topic: 3436 Message: 3436

Looks like T120 (McHenry County) has been rebanded ... I just have the control channel information as a "neighbor", but it's now 852.4125 which should make T120 (I wasn't able to verify them) -

851.41250 (c)

852.91250 (a)

853.43750 (a)

851.96250

855.98750

3437. T120-McHenry Rebanded

Yahoo group: StarCom21

Thanks Mike, your 852.4125 on top in your post is correct , but in your lower list you changed it to "851", just to let you know...Good work on the info.....Ron in Joliet

3439. StarCom21 Profile Call for Updates

Yahoo group: StarCom21
Date: 2009-07-14 20:26:23 UTC
From: Rich Carlson
Topic: 3439 Message: 3439

I will be working on updates to the CARMA StarCom21 Profile this week. If you have a minute please review the current version (at http://www.carmachicago.com/profiles) and check for any errors etc.

I am going to update all the sites that have been reported as Rebanded in the last month or so on these Lists and RR as well as any other updates I have saved. In addition I will include the presumed Rebanding freqs for those 866-869 MHz. channels but notate those that have not yet been reported as Rebanded.

I am also interested in any other updates, especially for downstate. If you see any missing talkgroups or freqs please let me know. If you run Pro96Com please send me your files for your local sites so I can compare them with our listed freqs.

I will post the new Profile as soon as it is done and will announce it to the Lists.

Thanks!

3440. Re: Springfield City application for P25 Frequencies

Yahoo group: StarCom21
Date: 2009-07-15 17:19:36 UTC
From: citrus801
Topic: 3151 Message: 3440

These were submitted to Radioreference this week:

TALKGROUPS:
4901 Sangamon County Sheriff's Dept Ch-1
4902 Sangamon County Sheriff's Dept Ch-4
4903 Sangamon County Sheriff's Dept Ch-5

3441. Talkgroup List From a Local ISP "3-Ida" Radio

Yahoo group: StarCom21
Date: 2009-07-16 16:47:25 UTC
From: Mike Curtis (KC)
Topic: 3441 Message: 3441

I noticed earlier this morning that one of the local ISP investigators (3-Ida series) flipped through a lot of the talkgroups on his/her portable radio (including some that didn't show that were "denied" on T134) - here's what was logged by Pro96Com (in this order)

9109 (ISP EMS 1A)

9111 (ISP Fed 1A)

9110 (ISP Fire 1A)

9086 (ISP Command 1B)

9015 (ISP District 7A)

9126 (Unknown)

13092 (Unknown)

17093 (Unknown)

17090 (Unknown)

13102 (Unknown)

17088 (Unknown)

17089 (Unknown)

9113 (ISP Auxiliary 1A)

9116 (ISP Auxiliary 1D)

9114 (ISP Auxiliary 1B)

9115 (ISP Auxiliary 1C)

30306 (ITTF Region 3B)

30305 (ITTF Region 3A)

30302 (ITTF Zone 3)

30334 (ITTF Incident 3)

30328 (IESMA)

13106 (ISP Air Ops B?)

9038 (ISP D17 Detail B)

13052 (ISP D9 Inv)

13053 (ISP D10 Inv)

13054 (ISP D14 Inv)

9079 (ISP D17 Inv)

17058 (ISP D18 Inv)

9122 (Unknown)

9125 (Unknown)

9133 (Unknown)

9134 (Unknown)

17089 (Unknown)

13101 (Unknown)

9130 (Unknown)

9138 (Unknown)

13095 (Unknown)

17092 (Unknown)

9071 (ISP D17 Car-to-Car)

9077 (ISP D7 Inv)

Nothing groundbreaking, but definitely interesting to see what talkgroups are in the radio.

3442. T126 Rebanded?

Yahoo group: StarCom21
Date: 2009-07-16 16:51:37 UTC
From: Mike Curtis (KC)
Topic: 3442 Message: 3442

Heard some Motorola techs on TG 1 this morning doing a rebanding. From what they described - doing "only channel 5 and 6" and channel 5 being 853.4125, I'm guessing they rebanded the last two frequencies on T126 (Kane County). I could have sworn I heard one of the techs mention "Plato Center" and "Aurora" which would definitely make this T126. The new lineup should be -

855.73750 (c)

856.73750 (a)

856.98750 (a)

853.41250

853.93750

855.48750

3448. T207 Rebanded

Yahoo group: StarCom21
Date: 2009-07-17 23:12:51 UTC
From: Mike Curtis (KC)
Topic: 3448 Message: 3448

Looks like T207 (Pontiac) was rebanded today as well ... Showing
852.3250 as a control channel for them so the new lineup should be -

852.32500 (c)

851.96250 (a)

852.85000 (a)

851.48750

857.31250

From listening to traffic on ISP Dist 6A, it doesn't sound like they
knew what was happening :) The dispatcher called in a case with
Motorola about "dropped calls".

3449. Rebanded towers in District 14

Yahoo group: StarCom21
Date: 2009-07-18 18:37:32 UTC
From: N2DUP@aol.com
Topic: 3449 Message: 3449

FYI, I noticed the other day while driving to one of my offices that the Monmouth and Niota Starcom21 towers in District 14 have rebanded. The Joy tower in District 7 has not rebanded yet. I haven't been able to check other District 14 towers yet.

From: kaskaskiadean2007
Topic: 3451 Message: 3451

Group,

What would be the best setting to have for the threshold low & high settings. i have the PSR-600 and I know the default is 95 high and 75 low but i seen a post somewhere telling me the best settings to use or at least what was working for them the best. The problem is i cant find that info anymore....I had seen posts where the settings were changed quite a bit and read it help out on receivng the towers better or holding the conversation better. Please help me with this info please. Let me know what i should do.

3453. New StarCom21 Profile

Yahoo group: StarCom21
Date: 2009-07-19 22:26:42 UTC
From: Rich Carlson
Topic: 813 Message: 3453

I have completed updates based on the responses to my request last week.

I added a table of the various sites and the Rebanding status of each as well as edited the frequencies at many of the sites based on reports from members. I also updated some talkgroup information.

Please take a minute to review the Profile for any changes or updates that you feel are needed.

Thanks!

3454. Trouble with Uniden BCD396T

Yahoo group: StarCom21
Date: 2009-07-20 01:31:39 UTC
From: wxjeremy
Topic: 3454 Message: 3454

I've tried searching for help with several yahoo groups and RR. No joy. I originally programed in DuPage County, Will County, and Kane County (rebanded) into my newly acquired BCD396T (each county in their own dedicated system). I was getting very rough, if any at all, receive on any of these sites. For fun, I uploaded the Carma StarCom Z1 North programming file .usd file via bcTool and now I'm receiving MUCH better. I adjusted my individual 3 counties to the same parameters and settings as the .usd upload, but still no joy. Can anyone provide some insight on what I might have been doing wrong when programming the 3 individual counties? any and all help is greatly appreciated.

3455. ProCom96 program

Cris,
It's a great program, hope you get it running.
Try these links.

From: radiostarcom21
Topic: 3458 Message: 3459

Check the carma profile. I sent sites 202, 207, 229, and 231
to Rich last week.

Tom;

It also appears from this that 201 has rebanded but 208 has not. I have
other reports of 208 being rebanded. Can you verify 208 and 201?

Not sure if this is permanent or not, but the old control channel is
being used as a voice channel today.

3463. Re: Sites 203 and 204 rebanded

Yahoo group: StarCom21
Date: 2009-07-23 13:03:43 UTC
From: citrus801
Topic: 3460 Message: 3463

Since I ran Pro96com Tuesday night, Site 208 has been rebanded. Site 201 was rebanded already when I checked Tuesday.

Site 203, 204 and 206 are the only sites I can actually receive from my location. The rest I have to view via the adjacent sites tab on Pro96com.

Here's Site 206 Pesotum from brief monitoring this morning which has not been rebanded.

3464. SC21 Control Channel Info Needs Updated

Yahoo group: StarCom21
Date: 2009-07-23 13:13:23 UTC
From: SC21
Topic: 3464 Message: 3464

Hello all.

Some clarification is needed on some starcom sites, with regards to the actual control channel in use.

If you have pro96com and can get either an adjacent site or read the site it would be great.

Also, if you know the alternate control channels, would be great too.

1-038 and 1-039 is missing the control channels completely.

Thanks!

I see many 49xx talkgroups listed on Radioreference for Sangamon County Sheriff on Starcom21. Are these currently being used for dispatch (ex. are they simulcasting the VHF onto Starcom21 or have they abandoned VHF altogether) or are these just in testing stage?

From: SC21
Topic: 3471 Message: 3471

<http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4205608&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2F%3FClick%3D77512>

*The New Uniden BCD996XT
Now Available!*

/Uniden BCD996XT Base/Mobile Digital Trunking Scanner/

The new Uniden BCD996XT
<http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4205608&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FUniden_Bearcat_BCD996TX_Police_Scanner_Radio_p%2F10-501360.htm%26Click%3D77512>
may look the same as its similarly named predecessor, the 996T, but
inside it's a whole lot different! The new scanner significantly raises
the bar with much improved APCO-25 digital decoding as well as a host of
new features and more memory. For those who like GPS scanning, a feature
no other manufacturer offers, you can now enable and disable not only
Systems, but Groups as well, depending on your location (the optional
GPS antenna that we sell is required). The radio now offers a band-scope
feature, a Fire Tone Out search feature to help you determine the tone
out frequencies being used, improved Close Call, APCO-25 NAC code
decoding, and more. The 996XT is a big leap fo rward.

*Get your 996XT today with the optional Hometown Programming, ready to
use right out of the box!* *
<http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4205608&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FUniden_Bearcat_BCD996TX_Police_Scanner_Radio_p%2F10-501360.htm%26Click%3D77512>*

Features

IV with Control-Channel Only scanning and I-Call monitoring:
Tracks voice traffic on P25, Motorola, EDACS, and LTR Trunked systems
* Supports scanning of Rebanded systems
* APCO25 Digital Audio decoding
* Support for P25 Conventional channels that include NAC and TGID
user differentiation (P25 One-Frequency Trunk)
* Adaptive Digital Threshold - Automatically sets the digital decode
threshold for APCO 25 systems
* EDACS ESK support
* Control Channel Data Output - allows the analysis of control
channel data without the need to perform invasive modifications to
the scanner

* Close Call RF Capture
* Close Call Temporary Store (last 10 hits)
* GPS Support for location-based scanning, location alerts, and
crows-flight navigation*
* Independent GPS Control of Sites and Channel Groups*
* Supported step sizes: 5, 6.25, 7.5, 8.33, 10, 12.5,15, 20, 25, 50
or 100 kHz
* Fire Tone Out Alert
* Fire Tone Out Search - built-in frequency counter displays the
received tones.
* Band Scope - gives a graphic representation of signal activity.
* Multi-color display backlight
* Multi-Site support
* DCS/CTCSS Rapid Decode
* NAC decoding

If you're installing this or any base/mobile scanner in your car, trunk,
home or office, please check out the Uniden 4" External Speaker

<http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4205608&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FUniden_4_External_Speaker_p%2F10-531175.htm%26Click%3D77512>.
I have tried many speakers in my almost 20 years in this hobby and I have found this speaker to be one of the best. The speaker is black with Uniden's signature paw print embossed on the speaker's metal grill. Included in the box is the adjustable mounting bracket along with a 10 ft cold with a 1/8 (3.5mm) mono plug. You can expect high quality sound to be transmitted from this heavy duty external speaker.

I will be taking the New Uniden BCD996XT out on a road test. Stay tuned for my first look at this new product on Thursday, July 23 in our Scanner Master Blog

3472. T116 Rebanded

Yahoo group: StarCom21
Date: 2009-07-23 22:43:34 UTC
From: Mike Curtis (KC)
Topic: 3472 Message: 3472

Looks like T116 (Bradley) has been rebanded ... The control channel is showing up as 852.91250 so it should be now

852.91250 (c)

853.87500 (a)

851.41250

3474. Control/alternate channels

Yahoo group: StarCom21
Date: 2009-07-24 13:46:07 UTC
From: kaskaskiadean2007
Topic: 3474 Message: 3474

Group,

I am wanting to allow myself better coverage and add more towers to my list and i know that a total of 32 frequencies per bank is maximum. What I want to know is is it necessary to have the alternate frequencies in the list or should i put them in there. I know control channels are required but was thinking if i didnt need the alternate i could add almost a additional 10 towers in the list if i can get away with not having the alternate frequencies. I travel all over southern and central illinois and there are some areas that are not covered cause i have no more available slots so thats why i am asking if i could get away with those alternates and add more control channels from other towers in their place.

Thanks

Dean

The thing you are gonna have to do is decide if you want to keep all the preprogrammed stuff in ur scanner? If not, then you can erase whats in those folders and use that space for other stuff? You will have to save ur current configuration in v folder 00....then pull up the others as you need them. Or look in the other folders for the cities you want...but Illinois doesnt have many preprogrammed frequencies.

3476. T131 Rebanded

Yahoo group: StarCom21
Date: 2009-07-27 18:25:32 UTC
From: Mike Curtis (KC)
Topic: 3476 Message: 3476

A new control channel is showing up for T131 (LaSalle) so I assume the whole site's been rebanded ... The site should now be -

851.95000 (c)

852.47500 (a)

853.31250 (a)

851.42500

855.16250

3478. [Fwd: Fw: Narrowbanding Tutorial]

Yahoo group: StarCom21
Date: 2009-07-29 21:06:58 UTC
From: SC21
Topic: 3478 Message: 3478

Ran across this on the net and thought it would be of general interest to those curious about issues around narrowbanding, particularly with regard to the VHF 15kHz to 7.5kHz transition.

http://www.adcommeng.com/Narrowbanding_for_Technicians.pdf

3479. Updated CARMA Profiles

Yahoo group: StarCom21
Date: 2009-07-29 23:35:00 UTC
From: Rich Carlson
Topic: 3479 Message: 3479

I have updated the following CARMA Profiles available at
http://www.carmachicago.com/profiles

StarCom21
Will County
Kane County
Railroad Frequencies
DuPage County
Suburban Cook
Winnebago County
Taxis
McHenry County
LaSalle County
Franklin County
ClearTalk

Nothing earth-shattering, but the StarCom21 Profile has the latest Rebanding Sites listed, including 145, announced minutes after I posted the Profile, causing me to have to go back and do it all over again...

3480. T125-Grundy Co Rebanded

Yahoo group: StarCom21
Date: 2009-07-30 19:20:49 UTC
From: dataman60435
Topic: 3480 Message: 3480

This morning it was kool watching the rebanding of T125-Grundy Co, first the voice channel and one alternate cc was changed...They then moved the CC from the original to a alternate and rebanded the other alternate and regular CC....852.3875c, 852.075a, 853.9625a, 851.8875v....Ron in Joliet

3481. Springfield City Application for Starcom21

Yahoo group: StarCom21
Date: 2009-07-31 16:40:15 UTC
From: SC21
Topic: 3481 Message: 3481

For Rebanded frequencies to add to current Starcom21 sites.

This would also assume that the 2 Springfield sites will probably be rebanding soon.

3484. [Fwd: (CARMA) Site112? shows as a neighbor]

Yahoo group: StarCom21
Date: 2009-08-02 16:46:00 UTC
From: SC21
Topic: 3484 Message: 3484

Rich, and all,

Below is a file from this morning. Site 112 still appears to be a valid site?
Profile shows it as new 148, RR just skips that site number.
Any thoughts?

Greg

Looks to me like there are still some remnants on some radios codeplugs. Observe in your Pro96Com file that there is no control frequency listed for 112, nor is there an LCN listed. The "Belvidere" as listed is added by the user, it is not read off the control data.

148 has been confirmed as the new Belvidere Simulcast site number by myself and others.

It has been suggested that 112 may be used for the Rockford City site(s) when they hit the air, this has NOT been confirmed yet AFAIK.

I would purge your Pro96Com files and try it again, and when we get a confirmation on the new Rockford site we will have to edit the Pro96Com site file.

So far....

Some of the Rural Law Tacs may be shared by multiple agencies.

Assumed their dispatch is still on the same "channel" it was before on VHF.

From: Beau
Topic: 3490 Message: 3490

Hi all,
Im in springfield
I have a pro 2096
here are the frequency i put in 2-017 2-11 Chatham [Sangamon]
{R}851.40000 851.92500c 852.45000a 852.97500a 853.86250 855.18750

the scanner stops on 851.92500 an will not trunk what do i need to
change it is in mo mode
dg blinks thanks beau

3491. Updated CARMA Profiles

Yahoo group: StarCom21
Date: 2009-08-05 02:12:28 UTC
From: Rich Carlson
Topic: 3479 Message: 3491

I updated the following Profiles tonight:
Suburban Cook (Minor updates thruout)
Macoupin County (Minor updates to Sheriff)
Lee County (Update to Woodhaven)
StarCom21 (Updated talkgroups and reformatted)

The StarCom21 Profile has been reformatted a bit. I eliminated the Callsign field in the Freq table and split the frequencies into Control Channels and Voice Channels.

Enjoy!

3497. CARMA Friday Nighter / AWS Planning Session

Yahoo group: StarCom21
Date: 2009-08-06 11:49:01 UTC
From: Rich Carlson
Topic: 3497 Message: 3497

Please join us for the next CARMA Friday Nighter to be held at the O'Hare Oasis, above the Tri-State Tollway near Irving Park Road tomorrow, Friday, August 7. We pretty much start between 6:30 and 7, but some of us stop at the Barnaby's Pizza on Touhy & Wolf in Des Plaines around 5:00 beforehand.

We found an area directly above the roadway's SB lanes that has an outlet or two and is not bothered by the early evening sunlight, so look around for our location this time.

As has already been suggested, we will discuss planned activities at the Air & Water Show coming up along with anything else attendees wish to discuss.

See ya there!

From: Rich Carlson
Topic: 3501 Message: 3502

It is almost certainly a Springfield or Sangamon County talkgroup as the rest of these are in the 4900 series. My guess is that it is used as a Local Alternate by one of the suburbs of Springfield as the nearby ones are so used.

3504. Frequency order

Yahoo group: StarCom21
Date: 2009-08-07 23:27:54 UTC
From: tgbrengel
Topic: 3504 Message: 3504

Noticed on the new StarCom21 profile that control channels are listed seperatly from the voice frequencies. I was wondering how to tell the order that the frequencies should be listed in the scanner. I thought that the frequencies had to be listed in a certain order for the system to track properly. Thanks.

3505. Re: Frequency order

Yahoo group: StarCom21
Date: 2009-08-07 23:43:18 UTC
From: Jack Waterman
Topic: 3504 Message: 3505

Frequency entry order is only important for EDACS systems; then you MUST enter the frequencies in Logical Channel Number order. Order is unimportant for SC-21 (unless you consider the theoretical minimal increase in speed that results from entering frequencies in ascending or descending order).

2-015 2-F Mt Sterling [Brown] </apps/db/?action=siteInfo&siteId=325> 866.38750c 866.91250c 867.43750 867.96250 868.48750

2-022 2-16 Ellisville [Fulton] </apps/db/?action=siteInfo&siteId=411> 866.86250 867.38750c 867.91250a 868.43750a

*WHOA...

Something just found...

T307 Beaver Dam has now been UN-rebanded, is on 866.9, it was on 851.9

This could be an issue with being too close to the st louis metro east area, that hasnt done much rebanding OR that Lincoln or Vandalia is interfering (same cc), but you'd think they would just move to an alternate cc.*

Thanks for the updates Ed!

3511. T104 Rebanded

Yahoo group: StarCom21
Date: 2009-08-08 06:18:09 UTC
From: Mike Curtis (KC)
Topic: 3511 Message: 3511

T104 (Ashkum) appears to be rebanded. 851.86250 is the new control channel so the site should be -

851.86250 (c)

853.32500 (a)

851.33750

851.43750

860.83750

3512. Rebanded sites

Yahoo group: StarCom21
Date: 2009-08-08 17:06:01 UTC
From: mvhyden61
Topic: 3512 Message: 3512

The following sites have been rebanded and confirmed:

T103 Andover 852.9625
T107 East Moline 851.9375
T109 Joy 852.8875
T122 Rock Island 852.325
T123 East Moline 852.875
T127 Moline 851.8875

It's kind of funny, but I seem to be getting a better signal from each site. In fact, I couldn't receive T109 Joy at home in East Moline until now.

3513. Rebanding List

Yahoo group: StarCom21
Date: 2009-08-08 23:07:51 UTC
From: SC21
Topic: 3513 Message: 3513

OK, many, many sites have been rebanded in the past week...

RR: http://www.radioreference.com/apps/db/?sid=2324

In review....

These appear to be mostly everywhere in IL, except in the District 11 areas (Metro East St Louis) and in far south-central IL.

Some of the ones not listed as changed have possibly just not been verified yet!

Update Posted on 2009-08-08 18:05:44
*_Site Rebanding Status_*
700 MHz Sites are not listed here.

1-003 (1-3) Andover [Henry] (Rebanded 7/30/09}
1-004 (1-4) Ashkum [Iroquois] (Rebanded 8/7/09)
1-007 (1-7) East Moline [Rock Island] (Rebanded 8/7/09)
1-008 (1-8) Lake County [Simulcast] (Rebanded 7/16/09)
1-009 (1-9) Joy [Mercer] (Rebanded 8/6/09)
1-011 (1-B) Rockford Simulcast [Winnebago] (Rebanded 6/11/09)
1-012 (1-C) Rockford City [Simulcast] FUTURE
1-014 (1-E) Providence [Bureau] (Rebanded 7/30/09}
1-015 (1-F) Chicago North [Cook] (Rebanded 6/22/09}
1-016 (1-10) Bradley [Kankakee] (Rebanded 7/31/09)
1-018 (1-12) Illinois City [Rock Island] (Rebanded 8/6/09)
1-019 (1-13) Mount Carroll [Carroll]
1-020 (1-14) McHenry County [ISP Simulcast]
1-021 (1-15) Lena [Stephenson]
1-022 (1-16) Rock Island [Rock Island] (Rebanded 7/14/09)
1-023 (1-17) East Moline [Rock Island] (Rebanded 8/7/09)
1-024 (1-18) Forreston [Ogle]

I've noticed the same thing shortly after a site rebands.

I think they crank up the power a little to see if there are going to be any problems is my guess.

But, then they turn it back :-(

Mike

Correction: Site 205 East Lynn has not rebanded. I'm monitoring site 110 Melvin-Sibley right now and the adjacent site shows Site 205 still using its old control channel of 867.3375.

I have found that using "Neighboring Sites" is not always an accurate method of determining whether a site has been rebanded. I have seen a couple occurrences of PRO96Com reporting non-rebanded freqs on sites known to have been rebanded.

I presume this is not an error with PRO96Com but with the system radios not yet having become aware of the new freqs on neighboring sites. The control data stream may not yet indicate the new channel. It is also possible that the data file created by PRO96Com has older data in it that has yet to be overwritten.

The only way to truely determine the rebaning status of a site is by actual monitoring of the actual site, either by PRO96Com or other software application or by watching a scanner display. It is likely however that a report by PRO96Com that shows a new rebanding status is probably accurate, I would be more suspicious of non-rebanding reports from software.

Site 203 Champaign and Site 204 Danville agree with Site 110, all showing adjacent Site 205 using 867.3375. I cannot receive this site from my location to confirm.

I did a substantial amount of Pro96com site receiving along I74 this weekend which I'll post soon. Note that I wiped out all existing site files on my computer for my weekend research and so the Site 205 frequency is not being read from a previous file.

One other note:

Site 222 Ellisville is reported via adjacent sites to be using 852.3875 but I could never receive anything on that frequency despite being within range of that tower near Galesburg.

<<< This week their police radios are switching from analogue to digital. This means they'll be able to communicate with local, state and federal governments and do so from almost anywhere in the state. By going digital they could respond to calls more quickly and offer back-up more easily. The new system is funded by the public safety inter-operable communications grant. >>>

wow! i didn't realize that by going digital the rockford officers can respond to calls more quickly. i guess those digital radio waves travel much faster than those antique analog waves, huh? ;o)

New info is that they are expected to begin using the handheld radios next week with squad car installs still a work in progress.

Site 205 is confirmed to not be rebanded. I found an area of town where I could receive the site on my Pro96 and it showed 867.3375 Site 205. Maybe they switched to rebanded freqs temporarily, I don't know, but they are using 867.3375 currently.

3522. Confirming S. IL Rebanding

Yahoo group: StarCom21
Date: 2009-08-11 00:58:03 UTC
From: lazysenior
Topic: 3522 Message: 3522

The Cobden and Makanda sites in Southern IL have rebanded. Probably the Alto Pass site also, tho I have not confirmed this yet.

New control freqs are 15mhz below the original freq.

I use a GRE 600 and Win500 software. I simply changed the control freqs and in Win500 changed to custom trunking tables and rebanded. Worked perfectly.

I monitor mainly District 22 and occasionally District 13..

L.S.

3523. Re: [StarCom21] Confirming S. IL Rebanding

Yahoo group: StarCom21

What is the main control channel for Alto Pass? (pre-rebanding)

On RR we have the cc/ac listed as both cc, need to verify.

Anytime ANYONE knows of a new anythying (Talkgroup/Control Channel)
PLEASE submit it to RadioReference.com (the SUBMIT Tab) on the database
page.

Thanks very much

3524. StarCom21 Rebanding Update

Yahoo group: StarCom21
Date: 2009-08-11 03:00:25 UTC
From: Rich Carlson
Topic: 3524 Message: 3524

Culling data from the RadioReference site, StarCom21 Yahoo List, CARMA members and other sources, these are the only sites that yet need to be reported as rebanded:

North Zone: (9)
119 121 132 135 138 139 140 141 144

Center Zone: (1)
212

South Zone: (30)
302 304 305 309 310 311 316 317 318 320
322 323 325 326 329 331 332 333 337 339
341 342 343 345 346 348 349 351 355 357

Some sites have had conflicting reports, it appears that they may have reverted a site here and there, but they should eventually end up as rebanded soon.

At the rate of progress the rest of the sites should be finished by Labor Day.

Please let us all know of you find any of the above sites as rebanded.

I will have the latest CARMA Profile uploaded this evening at www.carmachicago.com/profiles

Topic: 3524 Message: 3525

Recent Starcom21 sites from this weekend for the I74 area posted here:
http://forums.radioreference.com/attachments/illinois-radio-discussion-forum/24305d1249961669-rebanding-starcom21-centralilstarcom21sitesaugust2009.zip

Don't trust that all the voice channels are listed as I was only able to monitor each site for as long as it was receivable, but you can review the control and alternate control channels, as well as the adjacent site listings.

I haven't had time to review them to see if CARMA and Radioreference are in agreement. If you find either is outdated, please submit corrections.

> What is the main control channel for Alto Pass? (pre-rebanding)
>
> On RR we have the cc/ac listed as both cc, need to verify.

I used 868.4125 and 868.9875 for Alto Pass. Neither of these is transmitting now.

It has now been rebanded to 853.4125 and 853.9875.
This has been confirmed by me.

Cobden and Makanda sites were rebanded last week.
I normally do not use Alto Pass but suspect they were changed last week also.

From: Eric Hultgren
Topic: 3527 Message: 3527

Just a heads up for those out here in Rockford. Rockford PD Controls 3, 4, and 5 have switched to Starcom a day early. The VHF frequencies for Controls 3,4 and 5 have been quiet since 7PM tonight. I dont have a starcom capable radio yet, but hopefully soon.

Eric

Rockford PD is confirmed today on StarCom 21 but designator protocols are not uniformly established.? The old Control 3 (City West) and Control 4 (City East) designators have alternately been referred to today as being Control 1 (City West) and Control 2 (City East).? The old Control 5 is still being called Control 5.? This was confirmed by a quick peek during a mobile radio install. There is at least one encrypted channel, possibly others.? The old VHF radios are not being removed from their vehicles at this time.?

Brad

From: mws72@qconline.com
Topic: 3529 Message: 3529

After seeing Rich's note about certain sites unknown yet for rebanding. I managed to pick up these overnight:

121 Lena (Stephenson Co)is now 852.8875
132 Oregon (Ogle Co) is now 860.2125
140 Sterling (Whiteside Co) is now 851.9875
144 Morrison (Whiteside Co) is now 851.9625

119, 139 and 141 are not rebanded yet

I didn't catch 135 and 138.

3530. StarCom21 Rebanding Compilation update

Yahoo group: StarCom21
Date: 2009-08-15 03:02:06 UTC
From: Rich Carlson
Topic: 3530 Message: 3530

According to the CARMA Profile, RadioReference and other sources here is the list of sites that I have not yet received reports of rebanding. If you are near one of these sites please let us know if it has indeed been rebanded:

119 Mt. Carroll
135 Pecatonica
138 E. Dubuque
139 Galena
141 Stockton

302 Lawrenceville S
305 Belleville
309 Flatrock
310 Chester
311 Lawrenceville N
316 Cora
317 Cypress
320 Golconda S
322 Robinson
323 E. St. Louis
325 Edwardsville
326 Eaton
339 Cave-In-Rock
341 Unimin
342 McClure
351 Villa Ridge
355 Godfry
360 Greensville (Not yet on the air?)

It appears that up north only the far NW corner of the state remains. All of the Zone 2 (Center) sites are done and a bunch remain down south. I suspect that many of the Zone 3 (South) sites have actually been done but since monitors are scarcer there we may not know about these yet.

On the latest CARMA Profile that I will upload tonight I changed all the remaining 866-869 frequencies to the rebanded 851-854 MHz. ones and left the non-rebanded sites with bold site numbers. If you don't find your local site on the listed freqs try the freqs 15 MHz. up.

You can compare CARMA Chicago profiles with RR. If they match, it's probably a good bet they will work just fine.

The ISP units are dispatched on 9098 (North) and 9099 (South). The tollway maintenance units (HELP trucks, money wagons, etc) are on 2002 (Maintenance). Those 3 talkgroups will get you everything happening on any of the toll roads. The rest of the ISTHA talkgroups (The ISP 'Tollway' talkgroup, 9100, and the rest of the 2000 series) are used infrequently and but couldn't hurt to have in the same bank with the others :)

T305 showing pro96com neighbor still as 866.8625
But 851.8625 is showing as T305 (on scanner)
866.8625 shows no signal on my scanner
(as Rich said my happen)

BUT

when I run pro96com on T305, is shows 866.8625 is the control channel,
with voice of 867.3875 and 867.9125. (Even though my my scanner is on
851.8625)

851.33750
851.86250d
852.38750a
851.91250a

BUT

on the way home, I got a voice channel of 867.9125 on the control
channel of 851.8625 (in know for sure, because I have all the rebanded
cc in a separate system and saw the voice channel on 867.9125)

VERY confusing.

T Mt Olive is showing a cc of 777.025
Never mind, pro96com changed it to 775.03125 after a few seconds

I am also having issues with the rebanding in the metro east area. I used to?receive up to five sites (excluding St Clair County) without too much work. After the reband (or what they have actually done) the only site I can receive as of last night and this morning is 358 (Randolph Co) My scanner stops sometimes on 305 (in St Clair Co) but receives nothing. All other sites are quiet even after the rebanded frequencies have been entered. I have left the old cc channels in the scanner just in case.

Please, anybody, any ideas as to what is going on?

Hearing what I believe are Bloomington PD "TOM" traffic units using Starcom21 TG 404 off Site 229 in Normal. Locations of traffic stops mentioned are in Bloomington.

Radio ids seen on Pro96com are...

621
6110
6112
6113
413477

Based on the radio ids and the TG number I'm guessing they are testing Starcom at this point.

It is not unusual for PRO96Com to report incorrect neighbors' frequencies, especially soon after a site has been rebanded. It takes a while for the changes to get propagated out to the rest of the system radios and sites.

Right now, the control channel is active (according to Pro-106) as 851.8625.

When I run pro96com on the site, it shows control channel is 866.8625
with 866.3375 & 2 867.xx voice channels.

T325 shows 305 as 866.8625cc
T359 shows 305 as 866.8625cc

T353 shows 305 as 866.8625cc
T353 shows 323 as 852.8875cc Failed, Current

During the past few days, while picking up T305 on 851.8625 control, it
has had REAL voice channels (as shown on the Pro-106 display) as being
867.xxx.

By the way, it does show activity on the system.

Also, since the rebanding of ANY site in the area, I've been picking
most of them up BETTER than previously, as if the power was turned up
and/or the band change makes a difference.

Pro-106: 851.8625cc

pro96com:
866.3375 vd
866.8625 c
867.3875 avd
867.9125 avd (lots of PvtData, Ameren)

Base: 762.00625 Spacing/Bandwidth: 0.00625 TX Offset 30.0
Base: 851.00625 Spacing/Bandwidth: 0.00625 TX Offset -45.0

Mostly, so far all affiliations have been Ameren RID and TGs 7505, 7510, 7511

Now, got TG17000 RID 3311008, 3911201

Also... neighboring site:
358 Waterloo [Monroe] Failed, Current

I have not monitored the site by itself, but according to pro96com there is some ISP traffic on there.

A very basic report here. I was downtown StL for over one hour on the riverfront around 2pm-ish. Monitored St Clair County without major problems. Always got 5 bars on 396XT. But as always some very garbled transmissions.

StarCom was hit and miss. Was able to receive on these sites ...

323

325

353

& some on 358. (note 358 is the only site lately I can hear anything on from south city. Usually I can hear from 3-4 sites)

Absolutely nothing on ...

301 (not even a signal bar)

305 (got five bars most of the time but no radio traffic at all)

From my basic report 301 & 305 are dead. I have always heard them without any problems at all.

Any ideas?

jeff

PS All updates have been performed.

3564. T 305

Yahoo group: StarCom21
Date: 2009-08-24 19:17:54 UTC
From: SRehm24416@aol.com
Topic: 3564 Message: 3564

To Terry W. and Cris H.

I did another short survey if you will. Started out south on Rt 3 into Waterloo. Sat on the WalMart parking lot and received the following

333

349

358

359 St Clair Co

325

323

353

310 weak

301 very loud ond clear for 301. So I was wrong that it was dead. (more later)

also actually received 356 from?(i think) Calhoun Co.

Still got 5 bars on 305 but still no voice.

So I could receive 10 sites from one spot. Pretty darn good.

Drove into Belleville and?Fairview Heights (in the heart of things) and got?much different results. Only got the following.

323

353

and still got a little from 358?Randolph Co down south.

301, 305, & 325 were all hit and miss. Most of time little or no signal.

359 St Clair Co was still almost perfect.

I found it odd that where there were more towers the signal was worse. 301 was five bars farther away and?virtually nothing closer in. I don't know if it is?RF overload or if other starcom towers were blocking it's signals something else. And as soon as I hit the river heading back to St. Louis almost everything was gone.

I am starting to believe the towers/sites are set up as very directional in a north/south pattern. Tons of radio traffic down south in a cornfield but almost nothing deep in the urban area. Just my showings for the day.

Still got nothing on 305. Anyone else? I may start from scratch with 305 and reprogram it later.

Thanks for listening guys. I really hope to figure this out. I would hate to completely lose almost 50% of my scanner traffic because of my location and starcom.

?

I live near Green Mount Road and Hwy 161 in Belleville. No outside antenna
Using GRE PSR 600

I have separate objects for

301 (Mascoutah)

305 (Belleville)

323 (East St Louis)

325 (Edwardsville)

353 (Wash Park)

355 (Godfrey)

358 (Waterloo)

359 (St Clair Simulcast)

Scanner connected here inside the house with RS 800MHz rubber duck

I get traffic on

301

323

358

359

Nothing on 305 (and I have both old and rebanded CC's and Alternates in the
TSYS) for 3 days now.

I even get "ok" reception of St Louis digital system with the scanner
sitting here.

There's definitely something odd going on!

I'll be driving to west county tomorrow for work.so more mobile info
tomorrow.

Subject: [StarCom21] T 305

To Terry W. and Cris H.

I did another short survey if you will. Started out south on Rt 3 into Waterloo. Sat on the WalMart parking lot and received the following

333

349

358

359 St Clair Co

325

323

353

310 weak

301 very loud ond clear for 301. So I was wrong that it was dead. (more later)

also actually received 356 from (i think) Calhoun Co.

Still got 5 bars on 305 but still no voice.

So I could receive 10 sites from one spot. Pretty darn good.

Drove into Belleville and Fairview Heights (in the heart of things) and got much different results. Only got the following.

323

353

and still got a little from 358 Randolph Co down south.

301, 305, & 325 were all hit and miss. Most of time little or no signal.

359 St Clair Co was still almost perfect.

I found it odd that where there were more towers the signal was worse. 301 was five bars farther away and virtually nothing closer in. I don't know if it is RF overload or if other starcom towers were blocking it's signals something else. And as soon as I hit the river heading back to St. Louis almost everything was gone.

I am starting to believe the towers/sites are set up as very directional in a north/south pattern. Tons of radio traffic down south in a cornfield but almost nothing deep in the urban area. Just my showings for the day.

Still got nothing on 305. Anyone else? I may start from scratch with 305 and reprogram it later.

Thanks for listening guys. I really hope to figure this out. I would hate to completely lose almost 50% of my scanner traffic because of my location and starcom.

Greetings Jeff,
Could be the use of directional antennas at the SC21 sites. They seem to be super saturating certain areas of the Metro East with large amounts of RF. It could be the result of more use of portable radios in those areas to ensure reception inside of buildings.

As we all know, t359 has failed before. And SC21 has to pick up the slack when that happens. Users on T359 consist of very large number of portable HT radios. Most of them. In fact t359 was constructed with portable HT radios in mind. SC21 was mostly built with mobile radios in mind. So, my thinking is they are super saturating key areas of the Metro East to ensure that coverage exists for the portable HT radios, even if T359 fails again. The portable HT radios can only tune to 1 site at a time, so the more Towers to choose from, the better. Which could allow for more even distribution of the portable HT radios across the differant backup SC21 towers. That way no single SC21 tower is over burdened. Capacity is a real concern. And most SC21 towers do not have the capacity that T359 has.

Anyway, that's my thinking.

Thanks Todd. I think my guess is pretty on target. There is no way you can hear so many sites north and south so well and then head west just a mile or two and drop almost all signals. Must be directional. But that still doesn't explain no traffic on T305 even though I get a great signal from it (when I do that is) . I'll just keep on trying. Maybe I can get a lesson from or get information from a?StarCom radio tech.

Have a great afternoon.

From: Spinner55
Topic: 3568 Message: 3571

Hello,

This surprises you? The 700/800 mhz system is like a cell system.
Without many towers for coverage, you'll have gaps in coverage. There
is ONE tower in our county (25 square miles). There are 15+ cells towers in the county and there are some gaps at times. IN building coverage will be poor with metal style buildings etc. Some Illinois departments have coverage in areas that they didn't before. But have little or no coverage in area they had before. Our PD will be switching in Oct. But they are using a limited amount of 'extenders', vhf portable to starcom. Time will tell how that will work.

Our department will have some starcom 21 radios but will be sticking with VHF. We have to maintain MABAS vhf channels any way. IF we go to out of state those will be the only common channels able to be used. Ok we could use 700/800 simplex but coverage will be very short range.

Reading the WISCON radio system info. Looks like Wisconsin is going statewide on digital VHF trunking for the entire state mixed in with some 700/800 in a L shaped path from Madison to Milwaukee then north.

So with us being on the Illinois / Wisconsin border. I see us soon having 2 radios.

Another problem is funding. The radios under the grant are 'free' (matching grant costs etc)under program. "airtime" is prepaid for 2 years then EACH radio costs (for now) $30 per month. With 17 portables, 3 front line, 2 reserve, 3 Chief cars, 2 ambulance 4 station radios, 3 dispatch radios = $12,240 per year.

I could put up our 'own' 700/800 repeater. About $20,000 to $30,000 per channel per site for a total between $40k-60K. if only 2 sites needed. 2 site system payback is between 3.4 to 4.9 years. (statewide used very rarely -99.99999% of our usage is in district.) I rather have 110% coverage then any statewide coverage. I have a cell phone for that. I'm more concern with fire fighting safety inside the building etc.

Oh the local rural departments are staying VHF only. They have no money to change over etc.

Hope this message is posted...

Take care

Good info, while SC21 seems to work here in Central Illinois, there are going to be those agencys that like what you said, just can not afford to change, some of the counties truly have a hard time finding the money to maintain what they have and pay there people.
As for the agencys in the South part of Illinois, even if they had the money, there is a big problem with the terrain of the land, and from what a trooper that I know, he says many the times they still need to use a cel phone to talk to others. And as far as I know to date they still have VHF systems that do work.
Here it takes 3 radios to make it work. VHF, EDACS, and SC21. And here is another problem, we have over 100 volunteers that form our EMA/ESDA, and its for sure they can not afford to switch to SC21, VHF Digital is on the table, but this will not be a big problem.
Just my input to a big mess at present, not much thougts that went into this system. I don't see how the State of Illinois can afford using the system, when they can not pay there bills !!!!!!!

pro96com is NOW finally showing that T305 cc is 851.8625 (when reading tower T359, T325)

T305 is now showing:

851.3375d
851.8625c "Control"
852.4750a
852.9125d
853.3125a
866.3375vd
866.3625c
867.3875vd
867.9125

So, thats a step in the right direction!

By the way, something odd is up tonight, all other sites coming in like usual, but T301 Mascoutah is FULL SCALE in Glen Carbon. (90-99% decode at most times) Usually I can not get the cc on this at all.
--775.34375cc
--775.55625av
--775.80625av
--855.1625i WQIU879 CW-ID
--859.3375d
*not sure what I is on 855.1625

Maybe Greenville is coming on the air soon, and the "direction" of the antennas have been changed?

Wait... T358 is beaming in tonight too, at 99%... maybe the band is open...
--775.31875cc
--774.56875v
--775.59375a
--775.78125av
--860.7875d

Mt Olive T312, 775.03125 is not detectable, even though it is probably closer to me that 358 or 301.

I'm getting 305 traffic tonight as well, but then I live in Belleville :-)
But I probably get most of the traffic off the Mascoutah tower

I agree Terry, the band must be open. I'm getting traffic off the Waterloo tower as well (and that's on a back of the set RS 800 Mhz rubber duck)

Let's keep our fingers crossed

Boy, I am glad I am not the only one with bizarre behavior on StarCom. T305 has to be directional. Because I get it very good here in south city. 358 has been coming in for weeks. Hard to get 325 and 323 from just across the river. And from my previous post I am convinced of the directional array for the antennas. Do you have an ideas as to the directions? Other than the obvious north south.

Hi Spinner,
Why lack of tower sites or coverage does not rise to the forefront BEFORE commitments does are made to join Motorola StarCom21 network?? I know that the Motorola StarCom 21 network has and does have coverage issue.... one need to only ask ISP officers (field officers) North and South.

But the State continues to push this system as the ONLY choice -- municipalities are being herded like cattle, by both Motorola and the State...to jump off their current system --which works. Or if municipalities are looking at Tait/EFJ/Harris as solutions --- road blocks such as HIGH competitive user fees are being put forth by Motorola. So much for the State of Illinois Interoperability system--ohh as long as it is Motorola. It would be interesting to see the price changes if the State of IL. (CMS) put out a shopping list for comparable P25 subscribers....

> Without many towers for coverage, you'll have gaps in coverage. There
> is ONE tower in our county (25 square miles). There are 15+ cells towers in the county and there are some gaps at times. IN building coverage will be poor with metal style buildings etc. Some Illinois departments have coverage in areas that they didn't before. But have little or no coverage in area they had before. Our PD will be switching in Oct. But they are using a limited amount of 'extenders', vhf portable to starcom. Time will tell how that will work.
>
> Our department will have some starcom 21 radios but will be sticking with VHF. We have to maintain MABAS vhf channels any way. IF we go to out of state those will be the only common channels able to be used. Ok we could use 700/800 simplex but coverage will be very short range.
>
> Reading the WISCON radio system info. Looks like Wisconsin is going statewide on digital VHF trunking for the entire state mixed in with some 700/800 in a L shaped path from Madison to Milwaukee then north.
>
> So with us being on the Illinois / Wisconsin border. I see us soon having 2 radios.
>
> Another problem is funding. The radios under the grant are 'free' (matching grant costs etc)under program. "airtime" is prepaid for 2 years then EACH radio costs (for now) $30 per month. With 17 portables, 3 front line, 2 reserve, 3 Chief cars, 2 ambulance 4 station radios, 3 dispatch radios = $12,240 per year.
>
> I could put up our 'own' 700/800 repeater. About $20,000 to $30,000 per channel per site for a total between $40k-60K. if only 2 sites needed. 2 site system payback is between 3.4

to 4.9 years. (statewide used very rarely -99.99999% of our usage is in district.) I rather have 110% coverage then any statewide coverage. I have a cell phone for that. I'm more concern with fire fighting safety inside the building etc.
>
> Oh the local rural departments are staying VHF only. They have no money to change over etc.

I've not been up north for awhile now but up north of Kankakee and south of Monee we couldn't even hit the system with our mobiles. Getting out in Monee and portables worked just fine. So Star-com is not the best answer for all.

My neighbor is a tech for a local ILL District, he said there are not enough towers and MANY gaps in the system...Most cars in most districts have "mobile" repeaters in the cars which help...In the Chicago area i hear some mobiles complain of going one mile with "no signal" and then great coverage...Last time i talked to my neighbor i asked why the Starcom antennas on there local tower were actually mounted three quaters of the way up and actually face EAST when the interstate is north, he said i think scanner listeners know more than the big boys!!!!!!!! !!There two green side mounts and im sure they have a directional problem as my side mount ChannelMaster 5094A scanner antennas have...My two cents....Ron in Joliet

OK. How about this for coverage. Today at Olive and Old Bonhomme in Olivette with just the stock antenna I was picking up voice traffic on St Clair Co, 305, 358 and another I can not remember. But wait...there's more. While in the ambulance bay at Barnes hospital with a 17 story building blocking our path to the east side without anything special I was picking up voice traffic from Dist 18 on T 307 which I think is in Greene Co. Listend for over five minutes. Tell me there ain't people looking after us.

ubject: Re: [StarCom21] T 305 Working
pro96com is NOW finally showing that T305 cc is 851.8625 (when reading tower
359, T325)
T305 is now showing:
851.3375d
51.8625c "Control"
52.4750a
52.9125d
53.3125a
66.3375vd
66.3625c
67.3875vd
67.9125
So, thats a step in the right direction!
By the way, somet
hing odd is up tonight, all other sites coming in like
sual, but T301 Mascoutah is FULL SCALE in Glen Carbon. (90-99% decode at
ost times) Usually I can not get the cc on this at all.
-775.34375cc
-775.55625av
-775.80625av

-855.1625i WQIU879 CW-ID
-859.3375d
not sure what I is on 855.1625
Maybe Greenville is coming on the air soon, and the "direction" of the
ntennas have been changed?
Wait... T358 is beaming in tonight too, at 99%... maybe the band is open...
-775.31875cc
-774.56875v
-775.59375a
-775.78125av
-860.7875d
Mt Olive T312, 775.03125 is not detectable, even though it is probably
loser to me that 358 or 301.

Topic: 3569 Message: 3579

The towers are definitely very direction.

325 Edwardsville is VERY northeast/east oriented. 5-10 miles south of the tower, it will start dropping out.

323 E St Louis and 325 Washington Park are definitely east oriented. Get over in St Louis and there isn't much coverage from there.
--I think 323 may cover St Louis City some.... and probably pointed towards southern st clair county
--but 325 is covering more of southern madison and northern st Clair Counties

307 - Beaver Dam is on a 400 ft tower.... anywhere in Macoupin County, its' booming in. Now, at my home on a 35ft tower, a rarely hear it, but get out on I-55 or near Edwardsville in the car, and it comes in all the time. Probably helps cover Montgomery Couinty

324 - Nilwood probably covers east and west (into Montgomery and Green Counties, and northern Macoupin/southern Sangamon)

312 - Mt Olive believe this site is Covering southern macoupin, very lightly northern madison, but main coverage is for central/southern Montgomery and all of Bond County.

356 - Calhoun County Appears to be covering southern Calhoun and Jersey County.
---This site always comes in well anywhere along the Mississippi River south of it (through Wood River to East St Louis)

If I ever get time I would like to make a map with what I think is the area representation of each sites coverage area.

There is a file out there somewhere with the Motorola "assumed coverage areas", but I can't find it.

From: Cris Hanna
Topic: 3569 Message: 3580

Had occasion to be out tonight and with some reprogramming of scanner I'm better able to determine which towers I'm getting signals off of
T-333 in Evansville, IL (Randolph County) coming in well on the East side of Belleville while in the car.
T-358 in Waterloo, IL (Monroe County) also quite clear.
Occasionally got something from East St Louis and Wash Park.
305 Belleville and 301 Mascoutah...very strong, but then I'm right in the middle

Hello Eric,

Talking to some Rockford fire members. They are going to use Control 3 or 4 (which ever is on the far east side) if they cannot get back on portables to dispatch.

Let me know which channel to monitor.

Thank you
spin

3583. StarCom21 sites on Google Maps

Yahoo group: StarCom21
Date: 2009-09-03 21:46:04 UTC
From: Mike McGowan
Topic: 3583 Message: 3583

This may prove I have too much time on my hands, but I have taken all of the information from the Carma profile and plotted all the transmit sites for StarCom using the "my maps" feature of Google Maps. Anyone wanting to check it out can go here:

<http://maps.google.com/maps/ms?ie=UTF8&hl=en&vps=1&jsv=174d&oe=UTF8&msa=0&msid=111451870734625024702.000471f4b4f35c71cd5b4>

A few things about the map:

After plugging in the coordinates for each site on the map I tried to locate the exact tower or structure used by a combination of satellite view, street view, and in some cases switching to Microsoft's Bing Maps for their Birds Eye view. If it still wasn't exactly clear I made a guess usually just putting the mark where the lat/lon coordinates landed me.

Pushpins are used for single site locations, blue for the north zone, green for central, and purple for south.

The "balloon" type pins are used on all simulcast sites, with different colors for each site.

At this time I included the county owned sites that use the same technology as StarCom including McHenry County (all of these being co-located with StarCom sites), Champaign's MDICE, and the St. Clair County system. My only regret doing this is that with all these sites included Google shows two separate pages for the sites, so not all of them are visible at one time on the map. I'm debating whether to take these sites out and make the map strictly StarCom so all the sites show up at once.

Google allows anyone with a Google account to make changes to the map, however I have it set up to only allow those that I invite to make the changes. If anyone is interested in helping to maintain the map or make corrections or additions to it, send me your e-mail address and I will add your name to the list. If you notice any errors either in locations of towers or the control channels listed and don't have a Google account or don't want to mess with the map, e-mail me and I will be glad to make the corrections.

Comments, praise, and even criticisms are welcome.

Mike McGowan - K9JPM

Mike, this is great, I had been thinking about doing something like this
myself, I am glad that you did this!

So far so good, i have added links to the database and the wiki.

3586. CARMA Meeting Saturday

Yahoo group: StarCom21
Date: 2009-09-04 01:56:03 UTC
From: n9jig
Topic: 2962 Message: 3586

Please join us this Saturday, September 5, for the next regular CARMA Meeting. Doors open at 1100, meeting starts at 1300. Please arrive by Noon so that lunch service can be completed by 1300.

The meeting will be at Phillies Pizza, 63rd & Kingery Hwy in Willowbrook. Please park on the west side of the restaurant, leave the front lot for the in-and-out traffic.

You must buy a lunch, but don't worry, the food is great and inexpensive. I especially recommend the pizza or fried chicken, but not together...

Talk-in is 145.770, PL 151.4, the Wireless Mic is 171.045.

Subject: [StarCom21] StarCom21 sites on Google Maps

This may prove I have too much time on my hands, but I have taken all of the information from the Carma profile and plotted all the transmit sites for StarCom using the "my maps" feature of Google Maps.? Anyone wanting to check it out can go here:

?

<http://maps.google.com/maps/ms?ie=UTF8&hl=en&vps=1&jsv=174d&oe=UTF8&msa=0&msid=111451870734625024702.000471f4b4f35c71cd5b4>

?

A few things about the map:

?

After plugging in the coordinates for each site on the map I tried to locate the exact tower or structure used by a combination of satellite view, street view, and in some cases switching to Microsoft's Bing Maps for their Birds Eye view.? If it still wasn't exactly clear I made a guess usually just putting the mark where the lat/lon coordinates landed me.

?

Pushpins are used for single site locations, blue for the north zone, green for central, and purple for south.

?

The "balloon" type pins are used on all simulcast sites, with different colors for each site.

?

At this time I included the county owned sites that use the same technology as StarCom including McHenry County (all of these?being co-located with StarCom sites), Champaign's MDICE, and the St. Clair County system.? My only regret doing this is that with all these sites included Google shows two separate pages for the sites, so not all of them are visible at one time on the map.? I'm debating whether to take these sites out and make the map strictly StarCom so all the sites show up at once.

?

Google allows anyone?with a Google account to make changes to the map, however I have it set up to only allow those that I invite to make the changes.? If anyone is interested in helping to maintain the map or make corrections or additions to it, send me your e-mail address and I will add your name to the list.? If you notice any errors either in locations of towers or the control channels listed and don't have a Google account or don't want to mess with the map, e-mail me and I will be glad to make the corrections.

?

Comments, praise, and even criticisms are welcome.

?

3588. CARMA StarCom21 Programming Files Updated

Yahoo group: StarCom21
Date: 2009-09-06 01:41:47 UTC
From: n9jig
Topic: 3588 Message: 3588

I have uploaded to the CARMA Profiles Page (http://www.carmachicago.com/profiles) the latest version of the StarCom21 Programming Files for ARC996 and ARC-XT.

These files contain the files needed to monitor StarCom21 with a BCD396XT, BCD996XT and BCD996T scanner, including the GPS coordinates.

Feel free to adapt them to your use by replacing the talkgroup lists if you desire. You can cut and paste from the CARMA Profile, RadioReference or your own lists.

These files were built with ARC996 and ARC-XT, but users of other applications such as UASD, FreeScan or others, may import them.

Enjoy!

3590. Scanner Listener Forum -- Peoria Superfest, Sat. Sept 19th

Yahoo group: StarCom21
Date: 2009-09-07 01:16:28 UTC
From: n9fam
Topic: 3590 Message: 3590

Annually there has been a "Scanner Listeners Forum" at the Peoria Superfest (Hamfest). This year the forum and discussion will begin at 1 p.m. on Saturday September 19. The forum/meeting will be held in the Forums Building, one building west of the Youth Building (the largest display building).

John Coker, N9FAM, will moderate the forum. Topics usually include new scanners, statewide radio system updates (including Starcom21), changes in public safety systems, trunking systems, military aircraft, sources of frequencies, and other topics as raised by the attendees. Several experts are usually in the audience, and can answer most questions that are typically raised.

Norm Schrein of National Communications magazine will be selling Bearcat radios, accessories, and subscriptions in his commercial booth in the Youth Building both Saturday and Sunday. Other vendors will have scanners and accessories also.

If there is enough advance interest, the Scanner Listener Forum will be held again on Sunday, September 20, with the time and building location to be announced that day. If you wish to have one on Sunday, please let n9fam@... know.

Peoria Superfest is a two-day hamfest, the largest in Illinois outside the Chicago area. More info on Peoria Superfest can be found at www.peoriasuperfest.com. Those that wish to sell in the outdoor Flea Market are advised to order spaces in advance on the website, especially if electrical hookup is to be needed.

3591. Rebanding Update

Yahoo group: StarCom21
Date: 2009-09-07 01:53:24 UTC
From: n9jig
Topic: 3591 Message: 3591

I took a ride to southern Illinois today to verify the rebanding status of the last dozen sites not known to be rebanded:

302, 309, 310, 311, 316, 317, 320, 322, 326 339, 341, 342, 351

If you map these out you would see that they are concentrated in the Lawrenceville, District 22 and Chester areas.

So far today (Sunday) I verified that these sites HAVE been rebanded and presume that all StarCom21 sites are probably rebanded now:

302 (Lawrenceville South)
309 (Flatrock)
311 (Lawrenceville North)
317 (Cypress)
320 (Golconda South)
322 (Robinson)
326 (Eaton)
339 (Cave-in-Rock)
351 (Villa Ridge)

I also verified several sites already reported as Rebanded:
303, 308, 313, 319, 328, 336, 337, 340, 343, 345, 346, 347, 348, 350, 354, 357

Tomorrow I will verify the last few sites:

310 (Chester)
316 (Cora)
341 (Elco)
342 (McClure)

I am staying in Metropolis for the night, I will head north in the morning to check those last sites.

I will post my Pro96Com files to the Files Section in a few minutes.

3593. StarCom21 Rebanding complete

Yahoo group: StarCom21
Date: 2009-09-08 00:25:55 UTC
From: Rich Carlson
Topic: 3593 Message: 3593

Over the last few months StarCOm21 has been rebanded a site at a time and it appears now that all sites have been rebanded.

List members have reported most of the sites by direct observation with the exception of a dozen or so sites in rural areas of southern Illinois, primarily in the Lawrenceville, Cairo and Chester areas.

Yesterday and today I travelled to these areas and verified that each of the as yet unreported sites have indeed been rebanded and that all StarCom21 activity in the 866-869 MHz. band has apparently ceased in favor of the 851-854 rebanded section.

I will be working on updating the CARMA StarCom21 Profile to reflect these sites as well as several more tidbits gleaned from this trip. I was able to find a few new frequencies assigned to various towers in the areas and was able to confirm the absence of a few others. I have yet to look at the talkgroup list to see if there are any unreported members of that, but I will shortly.

Give me a little while to make the alterations on the Profile, and RR staff to make the changes there.

Enjoy!

Greetings,

Trying to find site (new 299) today with no luck.

But looking at the neighbors I would guess that

it might be in Dist 9, if indeed it exists.

It is still showing up on PRO96.com as Failed Connected.

Also the city of Springfield is not using any rebanded

talk frequencies.

In the mean time I am Contact Secure :

Does anyone know if this system is still in operation?

Also, if it is really an Omnilink system, are the site numbers correct
and do they have a "zone" associated with them, like starcom21?

Topic: 3599 Message: 3600

Actually need to know too, which system id displays on each of the
control channels.

3601. Western IL trip

Yahoo group: StarCom21
Date: 2009-09-13 03:45:17 UTC
From: n9jig
Topic: 3601 Message: 3601

I took a trip to western Illinois to check out the newly opened Route 336 in the Macomb area and snagged a few more towers on Pro96Com. I will include the files here.

I was able to find new information about these sites:
104 Ashkum
106 Albany
109 Joy
114 Providence
117 Kewanee
211 Augusta
221 Monmouth
224 Macomb

The CARMA Profile has been updated.

3602. Re: [StarCom21] Western IL trip

Yahoo group: StarCom21
Date: 2009-09-13 04:03:57 UTC
From: Larry and Natalie Armistead
Topic: 3601 Message: 3602

I so wish I could get my new scanner programmed. I could pick all of these up and give you a lot more. I am just now savy enough to program my BC scanner.So I am still just on the old one. If someone could help me program the new one I would gladly share all info that I pick up Can contact me at larryandnatalie@... and I can give you phone numbers and contact info. Us grey haired old grandma's just are to old

Subject: [StarCom21] Western IL trip

I took a trip to western Illinois to check out the newly opened Route 336 in the Macomb area and snagged a few more towers on Pro96Com. I will include the files here.

I was able to find new information about these sites:
104 Ashkum
106 Albany
109 Joy
114 Providence
117 Kewanee
211 Augusta
221 Monmouth
224 Macomb

The CARMA Profile has been updated.

Subject: Re: [StarCom21] Western IL trip

I so wish I could get my new scanner programmed. I could pick all of these up and give you a lot more. I am just now savy enough to program my BC scanner.So I am still just on the old one. If someone could help me program the new one I would gladly share all info that I pick up Can contact me at larryandnatalie@... and I can give you phone numbers and contact info.
Us grey haired old grandma's just are to old

Subject: [StarCom21] Western IL trip

I took a trip to western Illinois to check out the newly opened Route 336 in the Macomb area and snagged a few more towers on Pro96Com. I will include the files here.

I was able to find new information about these sites:
104 Ashkum
106 Albany
109 Joy
114 Providence
117 Kewanee
211 Augusta
221 Monmouth
224 Macomb

The CARMA Profile has been updated.

3604. Re: [StarCom21] Western IL trip

Yahoo group: StarCom21
Date: 2009-09-13 11:42:43 UTC
From: Rich Carlson
Topic: 3601 Message: 3604

If your scanner is a BCD996T, BCD396XT or a BCD996XT you can download the ARC96 or ARC-XT files from the CARMA Profiles page at http://www.carmachicago.com/profiles and load them into your radio.

If you are in the Chicago area come on out to a CARMA meeting or Friday Nighter and we will sit down with you and show you what you need.

RadioReference will be undergoing maintenance on *Wednesday September 16th from 6:00 AM to 12:00 Noon CST*. Parts of the entire site will be unavailable during that time.

3607. Optimum settings for PSR-500?

Yahoo group: StarCom21
Date: 2009-09-17 01:51:40 UTC
From: ka9rxk
Topic: 3607 Message: 3607

I was wondering if anyone has come up with the optimum settings for monitoring the IL StarCom21 system on a PSR-500.

I spend most of my monitoring time on I-90 and I-294. That puts me directly between several simulcast sites for Tower 115. No matter what I have tried, I always experience occasional garbling of transmissions.

I have tried using attenuation, STAT mode, ROAM mode, and different antennas including the RS 800MHz antenna. No matter what I try, I still experience the same results.

Before owning the PSR-500, I owned a BCT396T which had the same problem with the simulcast sites. I was expecting better performance from the PSR-500 but have not been able to achieve it so far.

-Don in Elgin

3608. PSR500 on Starcom

Yahoo group: StarCom21
Date: 2009-09-17 22:41:44 UTC
From: dataman60435
Topic: 3608 Message: 3608

I do not take the PSR500 in the mobile anymore as cell towers and pure "overload" of the scanner has resulted in poor decode of Starcom...I purchased the 396XT, the "XT" model seems MUCH better in the mobile with alot less dropouts...On the way up I355 to Elgin last week it showed alot of progress keeping the signal on Starcom than the 396t that i sold ....I use the GRE500 at home in certain spots for Starcom.....My Opinion....

3609. RE: [StarCom21] PSR500 on Starcom

Yahoo group: StarCom21
Date: 2009-09-17 23:17:19 UTC
From: Cris Hanna
Topic: 3608 Message: 3609

Needless to say..everyone's mileage will vary

I have the 600 mounted in my vehicle with the same antenna on the outside as is used on the ISP vehicles..(chrome .open coil)

I have each tower set as a separate TSYS but all D11 towers in the same scan group. I have roaming set to OFF in PSREdit. I'm on the IL side of St Louis, so the RF density is not near what it is in the Metro Chicago area. But cell/nextel should not be a huge issue any longer because rebanding is complete.

I'm considering the XT for home and when out of the vehicle..just because I like some of the extra features AND the 500's seem to have a lot of issues with the antenna connection.

Topic: 3611 Message: 3611

I was on my way out of town late Friday morning when I noticed a fair amount of encrypted traffic on Starcom 21 talkgroup 1251 - I believe this was the first time I'd noted activity on that talkgroup. The traffic was heard at the same time that bunches of federal, state and local law enforcement officials were actively searching for escaped criminal Robert Maday in the Bloomingdale area - maybe it was a coincidence, maybe it wasn't.

FWIW, the known TGs shown immediately above (1265)and below (1241) TG 1251 in the CARMA SC21 profile are listed as being used by the Illinois Secretary of State (police).....

It has been reported that Greenville (Bond Co) should be on the air in about 3 weeks.

T361 has also been confirmed as a site to go online in the future.

Greenville Police, Bond County Sheriff (and possibly any other rural agencies) already have the radios, just waiting for the site to go online, due to a technical issue.

Hearing a new PD using Starcom21 today in Madison County.

7931 Dispatch
7932 "Car-to-Car"
7933 used for tac / car-to-car

RIDs 790xxx

This could possibly be the City of Madison, near Brooklyn/Venice/Granite City, as they were supposed to be coming online soon.

Multiple other new TGs in the area too today, no IDs yet, hearing radio service on some.

Some are possibly Ameren, an EMA agency in Madison County and have even heard Clinton County law again today.

From Galesburg.com (
http://www.galesburg.com/news/x1789522047/Knoxville-spends-31-000-on-police-radios
)

Posted Sep 22, 2009 @ 10:41 AM

KNOXVILLE —

At Monday's meeting, the Knoxville City Council approved spending an estimated $31,000 on the Knoxville Police Department.

Approximately $8,000 of that money will help buy two separate radio systems for the police.
The first radio system, called the Starcom21, offers "interoperability" on same channel for basic public dispatching from all emergency organizations, said Knoxville Police Chief Ronald Poyner said. As to the reason for the new radios, Poyner stressed that Knox County Sheriff's Department will soon switch to the Starcom21 system, from which Knoxville receives the bulk of its emergency communications.

"Since we are like a brotherhood with the county, and all communications come from them, we need to consider investing in the Starcom system," Poyner said in his proposal. The Starcom radios will be paid for partly by a state grant.

"These radios will never be this cheap again," said Mayor Terry Pool in support of the radios. Pool is familiar with the Starcom system from his job as EMS Administrative Director at Cottage Hospital.

The second radio purchase was for three narrow band radios for officers in the department.
"These radios are for communication with other city departments and the Knoxville fire department, who do not have the capability or necessity to be networked onto Starcom," Poyner wrote in his proposal to the council.

"The narrow band ones we don't have the option on. If we don't replace them gradually by 2012, when the FCC requires us to switch-over, then we're left in the dark," Poyner said.

Although at first glance the two systems may appear to overlap, Poyner said the two separate radio purchases are unfortunately necessary for officer's communication with local, county, and state emergency authorities.

"That's the nature of the beast," said Poyner.

The cost to outfit Knoxville's three squad cars with the Starcom radio system would be $3,984 plus a $420 yearly fee, while the three narrow band

radios costs $3,551.

Didn't have an HF radio with me but they mentioned a couple times that they "tried to reach District 9 on HF" but no response. I've seen some documentation on the "IEMA HF-NET" system but no frequencies were mentioned.

I did catch two IDoT workers working the drill on 146.7450 (114.8) (Marseilles, IL repeater) when a simulated StarCom failure occurred.

Could have been that there was no operator assigned to the HF module at the Round Table, or the HF was not maned in the IEMA mobil command trailer. Things have changed in Springfiled, or so I noticed when touring the IEMA building and the New Command Trailer.

From: train_radio_guy
Topic: 3628 Message: 3628

I'm sure most of the members of this group are well-seasoned, on the APCO-25 standard / Starcom21 system, so please bare with me on this question. I come from a background based primarily in conventional systems, with some early G.E. & E.F. Johnson Trunking. I'm interested in learning more about the Starcom21 system, and how to monitor it.

There is a large quantity of info out there on APCO-25 / Starcom21, and I was hoping someone could point me in a direction, so I could learn more (i.e. about digital trunking concepts, required equipment to monitor transmissions, frequency/group lists, etc...). Essentially, I'm looking for a good primer on digital trunking, preferably web/internet based. Any help would be greatly appreciated.

Thanks,

Paul

I still use the older Uniden 996t scanner and hear about all I want, but if you so desire the new Uniden 996 xlt is more money, but has a few more bells and whistles for the bucks. Both do a great job when using the data files from Radio Reference, which when a paid user, you can do a automatic load to the scanner using software.
Hope this helps, but depends on your location as to the amount of radio traffic on StarCom. I guess there are a couple of other brands of scanners, but I don't have those, so no comment!

As there are SC21 towers near, then go to Radiorefference and you can see what agencys use the system. Or anyway thats what I did, but live in Central Illinois. For sure the State Police will be active on any tower as they use the SC21 system. If you are new to the game, then I suggest paying the fee to Radio Refference and with the software they suggest, you can program the scanner. For sure the CARMI guys have a yahoo group, and they are always willing to help.

Site 360, Greenville, Bond County is now on the air.

851.5875 cc

I can not pick up the site from my QTH though.

Neighbors of 360, from what I see are 325, 359 and would assume that 312 is too

3637. New 396XT System28

Yahoo group: StarCom21
Date: 2009-10-07 20:08:23 UTC
From: dataman60435
Topic: 3637 Message: 3637

The poster getting a new 396XT, preprogrammed System28 has 77 Sites of Starcom already programmed BUT, there are alot of repeats and the "System " in 28 is NOT rebanded so if you keep it most all the 800 freqys have to be dropped by 15mgz...I went to each site in "System28" and re-worked it on my new 996XT and 396XT....Ron in Joliet

3638. CARMA Profiles Updated

Yahoo group: StarCom21
Date: 2009-10-08 02:04:14 UTC
From: Rich Carlson
Topic: 3020 Message: 3638

I have updated the following CARMA Profiles tonight:

Amateur Radio
Champaign County
ClearTalk County
Coles County
CPD ID's
Douglas County
DuPage County
Effingham County
Fulton County
Kane County
Knox County
Lake County
Lee County
Macon County
Macoupin County
Madison County
Massac County
McHenry County
McLean County
NWCD
Peoria County
StarCom21
Suburban Cook County
Taxicab
Tazewell County
Union County
Warren County
Will County

Thanks to all the CARMA members and friends who contributed to these resources!

From: train_radio_guy
Topic: 3628 Message: 3639

Thanks to everyone for their feedback. I've bookmarked the links, and will read through them, so I can brush up on the technology/system.

To answer the question of my location:

I work/live in Central Illinois (1/2 way between Bloomington/Normal & LaSalle/Peru, but frequent the Rockford area on a regular basis. While at work I could be working anywhere along the Indiana Border (from Kankakee to Champaign), to the Iowa Border (from the Quad Cities to Galesburg), and everywhere in between.

When I'm in the Rockford area, I usually stay in District 16 & 1 (State Police Districts). I was hoping to get back into the swing of things this winter with radio, and pickup a decent digital scanner. However, with my dated knowledge on radio, rebanding concerns from all the radio news threads, and the sheer cost of a good base scanner, I'm heistant to tie-up any serious cash in a radio, until I have a better idea of what I'm dealing with.

I am genuinely interested in getting back into radio, but I like to 'look before I leap'.

Thanks,

Paul

You should have no problem picking up the top half of the state being as flat as it is up there. And again, give yourself a couple of months to digest even the basic stuff, especially since you have been away from it for a while.

Good luck.

From: Rich Carlson
Topic: 3645 Message: 3646

No, it isn't you, it is an issue with ARC-XT and other software packages.

When I created the ARC-XT files by importing the Sites and Systems
from my existing ARC996 files the GPS info did not carry over. I then
tried it in FreeScan and had the same problem.

I sent an email to Gommert and he concurred that there was an issue
and said he would fix it soon. When he does, I will recreate the XT
files in ARC-XT and at the same time add in the new Site 360.

Ok Cool, I am fixing em up myself as i am listening across I-88
also i had to make sure that the system was Standard P25 - i think that is a software glitch as well.

SC21 is a pretty good system, on my 396XT with a 2.5DB antenna it is doing well, even in the boonies :)

3649. Question of the use of multiple sites

Yahoo group: StarCom21
Date: 2009-10-24 01:58:10 UTC
From: rfscanner
Topic: 3649 Message: 3649

I live between two sites, 02-030 and 02-017, closer to the 02-030 site.

I want to program both sites CC's and alt CC's. Is this an acceptable practice? These are not simulcast sites however it appears that the same or some of the same TGID's are assigned to each site.

I am experiencing some minor performance issues with random TGID's going silent at times when I know that there is traffic. It may have to do with my scanners settings of STAT ROAM or Auto and I have been doing some experiments as well as watching whats happening using Trunk Tracker II and UniversalTrunker and it does appear that sometimes the scanner is locking on to one site or the other sites CC for a period of time but I have not been able to associate this directly to when I loose one set of TG's or another.

Should I only be using the site closest to me - or rather the one with the strongest signal? Or can I use both or other's too that are within in receiving range? I was hoping to expand on my avaialbe TG's by using multiple sites that may have different TG's assigned to them.

I am working with a PRO106 but as a base - I rarely travel with my scanner. I am selecting the Stationary option vs. ROAM or auto and I program in both sites Primary CC and each sites alt CC's

Thanks

3650. Re: [StarCom21] Question of the use of multiple sites

Yahoo group: StarCom21
Date: 2009-10-24 02:08:34 UTC
From: Rich Carlson
Topic: 3649 Message: 3650

In this instance I would suggest that you program both sites, as area cars can affiliate with either site and you could miss traffic if you are only monitoring a single site.

I also suggest that you program in all known Control and Alternate channels in case they change. While usually the control Data os on the same channel all the time, they occasionally rotate it due to a radio failure or service.

You might also want to consider trying the Atterberry, Taylorville and Nilwood sites as they could get Springfield area traffic as well.

Check the CARMA StarCom21 Profile for freqs and site locations:

Topic: 3649 Message: 3652

Thanks for you input Rich - on both forums that you've responded to - I've been trying to tailor my question correclty.

I am programming all CC's and All alternates for each of the two sites - I do have Taylorville but have not attmepted Atterberry or Nilwood - I will do so.

Thanks again - my primary question of using multiple sites I beleive is answered - yes I can do so. now its a matter od setting it up corrrectly and maybe changing the scanning options for the CC's such as all of them in each pass, or one at a time, progressing in each pass -

By the way I just grabbed the CARMA profiles pdf - very nice work your team has certianly put in a lot of effort.

199, 299 and 399 are the "Sites on Wheels" (SOW's) assigned to each
StarCom21 Zone.

You have a good idea to program more than 2 sites even. It is not uncommon for a signal to be picked up on a site that is not the closest. And if you are going to only monitor the TG's for your area it really won't matter as long as you keep the scanning on each site as quick as possible.

3655. Lake County Simulcast site and BC-296

Yahoo group: StarCom21
Date: 2009-10-25 21:42:20 UTC
From: Keith L
Topic: 3655 Message: 3655

Hello.

I've just started trying listening to the Starcom21 system with a BC296. Its been working fine when receiving McHenry County Sheriff (1101) and the tollway tow trucks (2002), but most of the State Police stuff in the 9000s are very broken up. Would this be normal from the Fox Lake area of Lake County or would this be a shortcoming or defect of this scanner? I've also been using this with NWCD's P25 system. I just wanted to see if the issue is the BC296 before I dish out $500 for a newer scanner.

Thanks
Keith

Found the solution to this. There is an update to the digital card at:
http://www.uniden.com/my/downloads.cfm?product=BC296D

Just need to install the BCi96D UPDATE PROGRAM.

3657. St Louis City Police P25

Yahoo group: StarCom21
Date: 2009-11-04 03:03:11 UTC
From: SC21
Topic: 3657 Message: 3657

FYI, for those interested, I found a new site on the St Louis City System a couple days ago.

Site 2-005. 700 MHz site, could not find a license, but we believe it has been located at the South Patrol (HQ) Tower, although has not been confirmed. (There are new antennas there)

2-005

2-5

South Patrol Tower

769.21875

769.66875

770.40625a

770.71875a

773.28125a

774.08125c

What is different about this site, is that it actually shows to be a neighbor (and vice-versa) of the main simulcast system (2 sites) on 800 mhz.

2-001

2-1

City Simulcast

851.17500

851.70000

851.80000

855.46250

855.58750

855.63750c

855.88750

856.46250

856.71250

857.43750a

857.46250

857.48750

857.71250

858.01250

858.43750a

858.46250

858.48750

858.71250

858.93750

859.43750a

859.48750

859.71250

Now, for more info, the Lambert St Louis International Airport is also using another site on the system but it is NOT a neighbor of either site.

2-002

2-2

Lambert Airport

855.28570a

856.98750a

857.98750c

858.98750

859.98750

867.20000a

It may reband soon, but I believe, it is still active on 867.2 cc. (hard to hear it right now, I usually can decode the cc though)

2-999

2-3E7

Lambert - Bridgeton [2-002 Simulcast/Reband]

851.78750

852.20000

From: SRehm24416@aol.com
Topic: 3657 Message: 3658

Yes the city is, we believe, testing the 700MHz frequencies. Of the three towers that the city has they are using the South Patrol tower (on Sublette ave) only for the 700MHz freqs. They are actually, at this time, doing a type of simulcast of at least two of the towers in hopes of increasing reception of hand held radios on the everyday P25 system. The St Louis system only transmits on 70 watts from the repeaters. The new tower on Union Blvd near interstate 70 may or may not be in use yet. We have not had verification.

The results so far from listeners is that the signal from the 700MHz freqs is much clearer and has little or no garbleing.

Don't know how, or if, there will be a link to StarCom but it looks like it could work with a little effort.

FYI my 396XT shows the new site as - - SID:01CEh-0205
The regular P25 system in daily use is - - SID:01CEh-0201

Jeff

3661. Re: [StarCom21] FCC Modifications

Yahoo group: StarCom21
Date: 2009-11-10 15:37:16 UTC
From: SC21
Topic: 3660 Message: 3661

http://wireless2.fcc.gov/UlsApp/ApplicationSearch/applServiceSpecific.jsp?applID=5210283

Frequencies currently exist at "Elizabethtown". This application may
have the correct coordinates, as before this site had the same
coordinates listed in the FCC Database as tower 3-039 in Hardin County

Former dismissed application:
http://wireless2.fcc.gov/UlsApp/ApplicationSearch/applMain.jsp?applID=4886374

3662. Greenville/Bond County - SC21 Update

Yahoo group: StarCom21
Date: 2009-11-11 01:23:41 UTC
From: SC21
Topic: 3662 Message: 3662
Attachments: 3 described; binary payloads are missing from this source WARC

Greenville Fire, Greenville Police and/or Bond County Sheriff, have come online in the last week on SC21.

3-060

3-3C

Greenville [Bond]

851.12500

851.58750c

852.80000

853.25000

853.72500

I can not pick up T3-060 from my home.
I don't pick up much law traffic on T3-025, but have received fire comms enough times.
It's also possible that traffic is being relayed on Vandalia (330), Junction City (314) and Mascoutah (301) sites.

Have heard cars calling "Greenville" (like Sam-505??) and Greenville Fire District units (5100, 5101, 5102, 5105)

Heard pages and simulcast tx on 7876. Pro96com picked up traffic on 7877 after Greenville Fire units went en route on 7676.

From: Cris Hanna
Topic: 3666 Message: 3667

Not just a question of cost. The radio would require programming for the system. The State controls that..

Not likely to happen for "hobbyists" I'd guess.

3668. owning your own SC21 radio.

Yahoo group: StarCom21
Date: 2009-11-18 02:23:39 UTC
From: Ron Handke
Topic: 3668 Message: 3668

Might be wrong, but I think EVERY radio has its own ID to enable it to be on the system, so I doubt that buying one would get you going. But if it is like the EDACS system, then you need to key the radio to show it is on the system.
Can you clone off of another SC21, I'd guess so, but from there I have no idea what the Systems computer would do if 2 radios where on with the same ID. So I guess if it was me, I'd just buy a scanner and be happy, as then you can hear all of the system and towers and change without anyone telling you, you NO-NO. Much less cost that way.

"SUCCESS is liken the wind, it often changes direction with no reason or warning"

3669. Re: twoway radio

Yahoo group: StarCom21
Date: 2009-11-18 02:48:22 UTC
From: n9jig
Topic: 3666 Message: 3669

While it is easy to get a radio that would work on the system (They are all over eBay, etc.) you need an Advanced System Key and proper programming software and hardware to program a radio. Even if you could program it there are other legal and technical concerns.

Stick with a scanner, they are much more flexible and legal.

3670. Re: [StarCom21] Re: twoway radio

Yahoo group: StarCom21
Date: 2009-11-18 14:18:41 UTC
From: todd hartzel
Topic: 3666 Message: 3670

Greetings Rich,
     I totally agree. Stay away from the motorola trunk system radios, unless you have a valid-legal reason to have one.

Reason to use scanners rather then actual trunk radio:

#1: Flexibility of programming and scanning options
(scanner gives full access to all available talkgroups ;
Trunk Systems radios can be prgrammed with relative few
talkgroups or even just 1 single talkgroup)
#2: Scanners are still cheaper than trunk system radios
(So much cheaper, btw)
#3: Scanners have a much higher SCAN speed/rate. Some
Trunk System Radios are programmed with the SCAN mode
disabled. Those system radios that have SCAN mode can
be very slow indeed especially with conventional frequencies too.

Scanners are not perfect, with the good, comes some bad:

#1: Usually not water/rain friendly (But most Motorola Trunk Radios aren't either)
#2: Usually not very durable (tough) ; will not usually handle any fall/drop/shock conditions or abuse from the user. Trunk System Radios are built with limited ABUSE in-mind.
#3: Usually very poor RF front-end in the receivers when compared head-to-head with actual Trunk Systems Radios (mobile & handheld). Also scanners are typically less sensitive, and unable to coop with high RF conditions/environments of most major cities
#4: If lost or stolen, full access of the scanner is given to anyone that finds it (There are some notable exceptions to this rule) Trunk System Radios can be easily DISABLED or turned into a BRICK at anytime in case of lost or stolen.
#5: If you get caught with a scanner by local law enforcement, they might investigate you alittle to make sure your are NOT up to no good ; then let you go on your way. But, if you get caught with a Trunk System Radio that looks like it belongs to the police/sheriff dept of the local pd. You are going to fall under the magnifying glass very quickly. A deep investigation will likely begin. And you might have to answer some difficult questions.

Overall, scanners are the way to go. They are cheaper. Offer more features-options to the listener. Full access to all talkgroups and frequencies for the system. Final word: Stay legal.

3677. Starcom 21 TG 1284, Fish Kill on the Chicago Ship & Sanitary Canal

Yahoo group: StarCom21
Date: 2009-12-01 18:11:46 UTC
From: Kevin O'Rourke
Topic: 3677 Message: 3677

Hearing Illinois Department of Natural Resources Law Enforcement units (and others?) on Starcom 21 TG 1284 (DNR Region 2, Detail A) as they prepare for the poisoning of the Chicago Ship & Sanitary Canal in an attempt to prevent the spread of the Asian carp to Lake Michigan and beyond. See http://tinyurl.com/yejecn9 for more details.

3678. South Cook County Tower

Yahoo group: StarCom21
Date: 2009-12-01 21:07:32 UTC
From: Paul
Topic: 3678 Message: 3678

Hi all,

I have a question. I am not able to hear anything on the South Cook County Towers. I have a GRE 500 and 600. I use ARC500 software. I upgraded the firmware and software for both scanners and ARC500. I put the three control channels for the South Cook County towers in and nothing. The signal strength of the tower is coming through just fine. I live less then a mile from the Justice, IL tower but still nothing. Then I put in all the frequencies for South Cook, DuPage, North Cook, and Will (both control and voice) and now I hear bits of conversations on channels. My scanner recognizes the talk-group but when the freq. shift it doesn't follow the conversation. What am I doing wrong?

Paul

3679. T102 Starcom South Cook Co

I agree with you about GRE products. I'm wondering if there is a setting I should be using to hear these channels. Something I'm doing wrong. Because if you're hearing it, I should too. I use to be able to about a month ago but now nothing. Anyone have any clues on what I should do to hear the action on StarCom? Please folks, help me out.

Not sure about that. I haven't changed anything on my GRE/RS scanners since rebanding and I have no problems with Kane, DuPage, Will or Chicago South. I don't use anything more complicated than a rubber duck in the car while driving through those areas on various interstates/toll roads.

Current equipment below expectations

By STEVE RENSBERRY
srensberry@...

Published: Tuesday, December 8, 2009 12:40 PM CST
Members of Glen Carbon’s Finance and Administrative Committee voted Monday to recommend amending the village’s Starcom21 user agreement and to allow for the purchase of equipment that will improve the effectiveness of the current system.

The equipment will cost approximately $36,000 and be funded with money originally budgeted for the purchase of a new police vehicle, which would be postponed until the next fiscal year.

Starcom21, which the village began using in 2007, is a statewide public safety radio system owned and operated by Motorola. The system enables a variety of emergency personnel and agencies to communicate with each other across multiple platforms.

Those who use the system are required to purchase equipment as well as pay a monthly fee per radio to Motorola to operate on it.

“Interoperability is the key to the program,” Glen Carbon Police Chief David Bradford said.

The system is used extensively by the Illinois State Police and the Illinois State Toll Highway Authority. The Madison County Sheriff’s Department switched over to the Starcom21 system in 2007.

But the system in Glen Carbon has functioned below expectations, Bradford said, with radio reception at 80-85 percent instead of the standard 90 percent or better, one problem being the poor reception in buildings constructed predominantly of metal, or with metal siding.

As recommended by Bradford, the proposal involves the purchase and installation of “Pyramid vehicular repeaters” from Wireless USA, along with a plan to amend the village’s building and zoning ordinance to require the installation of repeaters in specified buildings where communication is limited.

A radio repeater works to amplify and improve weak signals.

Bradford said they have been working with Motorola for more than two years to resolve problems with the system.

The original 10-year cost projection was just over $200,000 when the village first acquired the system, Bradford said, but due to a drop in user contract fees per radio, the additional repeater cost would add only about $21,000 to that amount despite the required initial purchase for the repeaters and installation of $36,000.

County Ponders Radio System Future (http://www.911dispatch.com/db/index.php?option=com_content&task=view&id=2774&utm_source=feedburner&utm_medium=email)

Posted: 14 Dec 2009 07:00 AM PST

The original contract that DuPage County (Ill.) officials signed was for $7.1 million, agreeing to pay Motorola for a county-wide public safety radio system. Now those same officials say the final price could be $48 million, and that several local agencies are considering a pull-out because the cost is too high. There are also challenges to link to a M/A-COMM (Harris Corp.) system being built separately by Naperville and Aurora. As an alternative, the county is considering a less expensive plan to join the state-wide radio system, also built by Motorola. Read more about their deliberations here (http://www.suburbanchicagonews.com/napervillesun/news/1936151,6_1_NA13_PHONE_S1-091213.article).

Thanks Bryan.

I usually monitor 101, 102 and 113. I hadn't caught these. When I am up north this weekend I will focus on that site. Thanks again!!!!!!!

Brian

3704. [Fwd: [PRO96COM] Pro96Com version 1.9.1 Released]

Yahoo group: StarCom21
Date: 2009-12-18 15:14:51 UTC
From: SC21
Topic: 3704 Message: 3704

I've uploaded Pro96Com version 1.9.1 to the web site and is available at
http://www.psredit.com/pro96com

Release notes follow:

Version 1.9.1
---

* Updated RadioReference.com SOAP interface to version 7.

* Removed support from the ini file for changing the URL for the
RadioReference.com WSDL file for the SOAP interface. This
information is now hard coded into the program.

* Added support for the Motorola experimental TDMA systems that are
being tested in some area. While these systems cannot be monitored
currently, the control channel can be decoded. As a part of this
update, you will notice a /0 or /1 after the frequency on TDMA voice
grants. These values signify the slot number on the frequency being
used by that transmission.

* Added "S" column to the identifier table lists. The number in this
column signifies the number of time slots available in that table.
This value is used to calculate the frequency used in addition to
the base frequency and spacing.

3706. MetroEast

Yahoo group: StarCom21
Date: 2009-12-22 02:52:35 UTC
From: SC21
Topic: 3706 Message: 3706

A few notes as of lately.

1) Caseyville Police & Fire, Hollywood Heights FPD, State Park FPD have all switched to SC21 and being dispatched by CENCOM (St Clair Co)

TG7254 is a simulcast of 154.19 CSQ, pretty much keeps a frequency busy 50% of the time, picking up St Clair County, Monroe County and stuff from MO

2) T301 is no longer showing as a neighbor to sites 305, 325, 359. Odd, like it may be off the air ?????
*this may have something to do with Bond County (T360) coming online, or the future Addieville/Washington Co

3) T399 Site on wheels, one site was showing a different frequency than listed the other day, 776.2875 (usually 774.29375)

Another thing I've noticed in the past week or so.

It appears that OFallon, IL PD has switched over to SC21 exclusively. I've had two different scanners going locked on 460.5 which was their primary channel but it's been dead. Don't have exact date they switched.

From: RADIOMAN
Topic: 3708 Message: 3708

I've uploaded Pro96Com version 1.9.2 to the web site at
http://www.psredit.com . Release notes follow:

Version 1.9.2
---

* Corrected pointer with TDMA systems where it would point to all
  channels with the same frequency instead of the specific channel with
  the highest priority.

* Added Encryption Seen flag to the Talkgroups.txt file. This flag
  will be set to "Y" if encryption has ever been seen on the talkgroup.

* Added hit counts to the talkgroups.txt file. The hit counts will
  be incremented when the talkgroup is seen.

* Tower files updated to version 6. Now support storing the frequency
  lists with the TDMA Slot numbers. Identifier tables also include
  the number of slots in the table.

3715. Signal audit of Starcom 21 (River Bend/Refinery Cooridor of MetroEast)

Yahoo group: StarCom21
Date: 2010-01-09 00:37:31 UTC
From: todd hartzel
Topic: 3715 Message: 3715

Greetings all,
Recently I visited a ham friend that lives in the River Bend/Refinery Cooridor. The area of: Hartford/Wood River/Roxana/S. Roxana None of these agencies have made the switch to Starcom 21 yet. Neither has other near by agencies such as: Alton, E. Alton. I took my bcd-396t figuring I could conduct a signal audit of Starcom 21 coverage in this area and get some idea of what these agencies would get once they too made the switch.

Well, the switch for these agencies is NOT going to occur for a long time. The reason: The near by Starcom 21 towers have very very poor signal strengths. I spent most of my time along IL 111, south of IL 143 ; near the area of the Conoco Phillips (old Shell Oil) Refinery. Here are the towers that surround the River Bend/Refinery Cooridor area:

- T323 (E. St. Louis)
- T325 (Edwwardsville - SIUE - Cougar Lake Tower)
- T353 (Washington Park - Prison-Corrections facility tower)
- T355 (Godfrey)

Signals were best from the Washington Park tower (T353). I got 2-bars of RF energy. Godfrey tower (T355) had the next best signal. EDW (T325) was very weak. And the E. St. Louis (323) had the weakest signal. This was a surprise. I expected the SIUE (T325) tower have a very strong signal. It was not. I drove around the area and I checked the signals inside of my ham friend's house. I was very very disappointed. Signals were so weak. Inside his house. And also very weak outside too. I was stunned.

My conclusion: The River Bend agencies: Hartford/Wood River/Roxana/S. Roxana and even other nearby agencies: Alton/E. Alton are NOT going to be able to switch to Starcom 21 until these very serious low RF conditions in that area are fixed. They are going to have to do one of the following:

#1: Either add a tower into the River Bend area.
#2: Or, change the directivity of the current towers surrounding it.

The SIUE tower is so close to the River Bend area, and should be FULL scale and more on my radio. It is NOT. And that was shocking. The Godfrey Tower is also not far away, and should be FULL scale too. It is not. Instead, the Washington Park (Prison) tower near I-255 & I-64 is the only tower showing good strength in that area. That too was quite a surprise. (can you say directional antennas)

It has been suggested previously that the Madison County area could be getting a SIMULCASTing county wide extention to the Starcom 21 system. If this is the case, then I make a case here for the River Bend area to get its own simulcasting tower.

Otherwise, the River Bend agencies will be stuck on VHF/UHF. Or, these agencies will be very very disappointed when they make the switch to Starcom 21.

3716. RE: [StarCom21] Signal audit of Starcom 21 (River Bend/Refinery Cooridor of MetroEast)

Yahoo group: StarCom21

From: John Zelz
Topic: 3715 Message: 3716

Todd and group,

I found an interesting thing out about tower signal strength this week. I received my county assigned Motorola portable radio this week. Our county, McHenry County, has an overlay simulcast system linked to Starcom. The sensitivity of the Motorola radio blows away the Uniden 396T with stock antenna that I had been using. Now I'm sure that the stock antenna plays a pretty big part in it, but I was amazed at being able to having very good signal strength in my basement, where I have not been able to get anything on the 396.

So what's the point? Simply, mileage will vary. There are lots of variables that come into play, some of which can be changed, and some cannot. I'm sure everyone has an opinion on the system, and many have been voiced on this group. We just need to keep in mind that every case will be a little different.

Oh, yes, the audio of the Motorola is pretty good, but the 396 does a nice job in a side-by-side at a more consumer friendly price. However, you do get what you pay for.

Well, as we all know the SIUE (Edwardsville tower) 800 MHz, formerly a 700 MHz site, has been pointed nearly directly east with a bit to the NE. There are times in Glen Carbon when I can pick it up (mobile).

With the addition of the Greenville site (Bond County), it has definitely improves coverage in bond and Clinton counties (and assuming souther Montgomery as well).

Word has been that there will be a site in Addieville (Washington Co IL) Near Nashville, but hasn't come online yet that I know of.

Madison County is badly in need of some additional tower sites, especially if Motorola ever wants the whole county to be like St Clair County is.

By no means, do I think a simulcast system will work or is even necessary here.
More sites, separate frequencies are needed.

As you are saying, a site would probably be required in the Wood River/Roxana/S Roxana area.

Also, Maryville and/or Collinsville needs a site. (which Maryville has been reported as a future site)

It has already been said before that Edwardsville and Mt Olive do not even cover Bethalto well enough (also using T355 Godfrey)...
There is going to have to be something along the interstate area south of mt olive.

Hopefully soon, either funding or Motorola themselves will step out with the P25 system that is going to help cover the St Louis Metropolitan area a little better than it currently does.

3722. $10 million communication system will link Illinois, Missouri police departments

Yahoo group: StarCom21
Date: 2010-01-13 21:51:02 UTC
From: SC21
Topic: 3722 Message: 3722

$10 million communication system will link Illinois, Missouri police departments
BY MARIA BARAN - News-Democrat

(http://addthis.com/bookmark.php?v=250&pub=mianalytics)

A communication system that will cost almost $10 million will link Illinois and Missouri police departments, allowing emergency response workers to talk to each other with more ease and create a communication system unlike anything else in the country.

The St. Louis Regional Digital Microwave System, a regionally based network similar to that which links office computers, consists of 76 tower sites in Madison, Monroe and St. Clair counties, Franklin, Jefferson, St. Charles and St. Louis counties in Missouri, and the city of St. Louis.

The $9.7 million system is funded by the Department of Homeland Security. It will be designed and installed by Paris-based Lacatel-Lucent Technologies, announced the East-West Gateway Council of Governments.

It will provide a level of interoperable communications not seen anywhere else in North America, said Nick Gragnani, executive director for the St. Louis Area Regional Response System.

"The microwave network is similar to an office computer network where desktop computers, laptops, fax machines and printers are tied together to work on network," Gragnani said.

"The St. Louis Regional Microwave Network will tie individual radio systems together, allowing roaming capabilities while increasing radio coverage over 98 percent of the region, 99 percent of the time, for 100 percent of the users on the system," he continued. "The microwave network allows these independent communications systems to be linked together thus creating a 'system of systems' network."

All local agencies, including fire protection, ambulance, school and sewer districts, will be served by the new system.

The first of three installation phases is scheduled to begin this month for the Illinois counties and St. Louis city.

Contact reporter Maria Baran at mbaran@... or 239-2460.

3723. East Dubuque Site

Yahoo group: StarCom21

From: matthew
Topic: 1625 Message: 3723

Hi I orderd a watson wsma 801 anttenna for my bcd396 xt i can recieve the galena tower from Hazel Green Wisconsin but I live in dickeyville and can't pick up a single thing I should beable to here the East Dubuque tower, I programed the frequencies in from Carma, is there other frequency sources for sc21 or am i just a little too far?

Thanks

3724. Juction City Tower

Yahoo group: StarCom21

From: kbraszzz
Topic: 3724 Message: 3724

Just wondering if anyone had any info on this site? I can pickup District 12 & 19 on the Flora site (6.78 miles from me). I pickup District 13 on the Bluford Site (21.35 miles from me), and surprisingly pickup Champaign talkgroups on the Mason site(22.98 miles from me). I would think that I would be able to pick up District 11 on the Juction City Site(26.9 miles from me).

After reviewing the info on Radio Reference, I'm wondering about the frequency. They show it as Call Sign WPTZ798, but had no info for this Call Sign.

Once in a great while, I will pickup a District 11 talkgroup on the Mount Vernon site(22.41 miles from me), but would think I would be better off using the Juction City site as it's located in District 11.

Greetings,
       You might not be getting talkgroups due to no ISP troopers with their radios tuned or affiliated with that tower. SC21 is kinda like a Cell Phone network. If there are no Trooper ISP radios tuned to a talkgroup on that tower, then the tower will put out NOTHING at all.

Here in St Louis, MO, the folks on the StLase yahoo group are having a tough time understanding that concept. The SLMPD P25 system has a loan 700Mhz tower, T205 that only spits out talkgroups IF a police officer's radio is actually tuning in a talkgroup on the tower. Otherwise, nothing comes from that tower.

Todd,

Thanks for your response...I've never had it explained that way.

I would have to assume then that the Juction City tower is only being used by Ameren.

Should I concentrate my efforts on the Mount Vernon tower to pickup District 11 talkgroups then? I guess I'm really asking what is the eastern most tower that District 11 talkgroups are heard regularly.

At the time, I'm just using an indoor antenna, but am researching outdoor 800mhz antennas.

Thanks

Topic: 3724 Message: 3729

Greetings,
      Now I do not have the answer to that. I know that Mt Vernon itself is in the dead center of Jefferson County. And is technically out of the D11 area. But if D11 talkgroups frequent it, you must assume that the primary coverage of the Mt Vernon Tower is in a D11 area. Perhaps to the NW towards Breeze and Carylyle Lake, or to the West along the far east end of D11's area along I-64 or Il Route 15, or perhaps the distant US Hwy 50 to the north of Carlyle Lake. That would be my best guess as to what the Mt Vernon Tower is trying to cover ; and why so much of what you hear is D11 from it.

Bluford Tower is also in Jefferson County, IL. My guess is that it is either coveraging the rest of the region or is perhaps also aiming its primary signal to a differant zone.

This is nothing new with SC21 towers. Here in the St Louis Area, most of the SC21 towers do in fact use highly directional, highly focused antennas to cover specific areas. The EDW - SIUE tower is a great example of this. Its primary direction being East. T358 down there in Monroe County also comes into the St Louis region with a rather big signal in some areas, especially in St Louis City. T333 in Evansville, IL can be heard easily in St Louis City (South City). Though it is down in Randolph County, IL.   Obviously T333 & T358 are targetting the IL Route 3 highway.

I suspect most towers are configured in a similar manner. To cover specific IL Routes, IL Interstate, and US Hwys across IL. Sounds like Mt Vernon Tower is trying to cover either I-64, IL Route 15 or perhaps US Hwy 50 to the NW or WEST. Weird MASON is getting Champaign talkgroups, unless Champaign units in the area for training purposes near Effingham, IL or MASON is using an extraordinary HIGHLY directional antenna pointed NB along I-57. Also sounds like BLUFORD is covering mostly to the SW of Mt Vernon for Hwys in D13. Or perhaps Blueford is an OMNI tower, providing coverage into most of Jefferson Cnty, Perry, Franklin, Washington Cntys. Since Washington Cnty is also in D13, I would guess that the Mt Vernon Tower is more focused towards the NW rather then WEST along I-64. I-64 runs thru Washington Cnty (D13).

Again, I am guessing on the directivity of the antennas from these towers based on your observations of talkgroups coming from each of the towers with the exception of the talkgroups from Champaign appearing on the Mason tower. I would love to see the DIRECTIONAL antenna used at MASON pointed along I-57 towards Champaign area. That is a huge distance. I think its over 50 miles to the Champaign Cnty boundary from Effingham? MASON is south of Effingham.   Hey if you find/locate that tower in MASON, take a picture of it. Would love to see its impressive BEAM antenna.

Todd,

Thanks for your response. I would have to agree that the Mount Vernon site is probably trying to improve coverage on I-64, Hwy 50, and Hwy 127, as the Bluford site covers District 13. This question will probably show my ignorance, but why don't they just use the Juction City site for that coverage?

I definitely agree that the Mason site must be pointed north for continued coverage on I-57. When I said Champaign talkgroups, I really meant District 10 talkgroups. I just wish I could pickup District 11 as well as I can pickup District 10, but with this new info and the addition of a well placed outdoor antenna, perhaps I will.

Thanks for all your help,

Not that I have a personel need, as our EMA already has these radios, but how do they choose who
can use the system. As I hear Ameren Cilco, Animal Control, Street Dept's, and the list goes on.
I know that I am wrong, but thought this was a system for Law Enforcement, Fire Dept. and City and Gov. owned Emergency agency's only, just asking to get a better picture of who can use the system. Also this may help to figure out how to sort out the user that one does not want to hear.

. What is STARCOM21?

STARCOM21 stands for STAte Radio (Voice) COMmunications for the 21st Century. It is a 700/800 MHz, APCO

Project 25 interoperable, digital, trunked statewide voice radio communications network. The network is owned

and operated by Motorola Inc and leased back to the State of Illinois for its use. It was built to public safety

standards and is available to governmental as well as non-governmental bodies subject to state approval and

contractual requirements being met.

. How can an agency become a STARCOM21 customer?

State agencies should contact Dan Meseke, (Dan_Meseke@..., 217 -557-1294) for information about

service initiation. Non-State entities should contact Mike Greenaway, (Mike.Greenaway@..., 847-

576-6576)

I believe Ameren became a user because they had frequencies to share with the state (and the state probably had better coverage than they did) :) They are, however, prohibited from using 700 MHz channels so some sites that are within Ameren's work area have both 700 and 800 MHz frequencies.

3737. Re: [StarCom21] Re: Juction City Tower

Yahoo group: StarCom21
Date: 2010-01-21 13:55:26 UTC
From: todd hartzel
Topic: 3724 Message: 3737

Greetings,
     Yeah. I did not realize that Effingham is on the far north end of the D12 Patrol area. And that the Champaign D10 District boundary covers all the way south to the next county north of Effingham. I thought it was SO MUCH further north. I have driven that route. I have driven I-55 NB to Springfield, I-72 EB to Champaign/Urbana then SB I-57 back to Mt Vernon. Also took US Hwy 51 NB from I-70 to Decatur, then I-72 EB to Champaign. Then SB I-57 again on more than one occasion.

That part of Illinois is so flat, and Kansas-Like. Big Prarie lands. I know 700/800Mhz travels well and far across that kinda terrain. SC21 towers can be easily spaced further apart from each other if they were all omni-directional. But, indeed, SC21 towers mostly use directional antennas at most sites. Not all. But alot of them. Certainly there should be fewer directional sites in D10, D12 & D9. More of them (alot) in D11, D13, D22, some parts of D18 near the Illinois River Valley and some parts of D19 near the Wabash River valley.

The Kaskaskia River valley isn't too hard to provide RF coverage in D10, D11 D12 & D13. My memories of the Kaskaskia river is the river is mostly at the same elevation as most of the surrounding terrain. Unlike the Mississippi, Illinois, Ohio & Wabash river systems where there are distinct valleys cut down by the rivers.

When you look at a map of SC21's tower locations. I tend to see the obvious relationship with the concentration of towers and the River Systems ; and to a lesser degree, some dense population centers thruout the state.

This map link clearly shows how the river valleys' (rough-hilly) terrain plays an important role:

http://www.carmachicago.com/profiles/StarCom21.pdf

Specifically look at Calhoun County, IL. Squeezed between 2 rivers: Mississippi & Illinois rivers. Very very low population in that county, but no less than 4 SC21 towers. Look for T306, T356, T352 & T338. Another good one is IL Route 3 along the Mississippi River between Chester down to E Cape Girardeau. Very rough terrain there. And very beautiful landscape there, may I add. Especially around: Grand Tower, Gorham, Fountain Bluff, Murphysboro and the Little Grand Canyon State Park. Thick concentration of towers around T332 (Gorham) in the shadow of Fountain Bluff and a landmark called: The Devil's Bake Oven and Backbone. This is the Trail of Tears and Shawnee Forest area and Illinois Ozarks region. The Mississippi River did a fantastic job cutting down (carving) that valley area over millions of years. Its beautiful. And worth the trip on IL Route 3. Don't forget your radio so you can tune SC21 too.

Anyway, I am not with the IL tourism board. Just pointing out something I know ; due to frequent trips to that area over the years. I suspect that the far-east end of D12 along the Wabash river may have some good scenery too with the heavy concentration of towers in a mostly rual area. I have not been there, but I suspect at least.

Btw...
That map is alittle dated. Since this map, T360 in Greeneville (Bond County) has turned ON.

Todd,

Thanks for your response. I would have to agree that the Mount Vernon site is probably trying to improve coverage on I-64, Hwy 50, and Hwy 127, as the Bluford site covers District 13. This question will probably show my ignorance, but why don't they just use the Juction City site for that coverage?

I definitely agree that the Mason site must be pointed north for continued coverage on I-57. When I said Champaign talkgroups, I really meant District 10 talkgroups. I just wish I could pickup District 11 as well as I can pickup District 10, but with this new info and the addition of a well placed outdoor antenna, perhaps I will.

Thanks for all your help,

Just a quick note. I have monitored Dist 11 on StarCom as far north as Springfield before. Maybe even just a bit farther. With flat terrain that covers most of Illinois is is easy to pick up signals far away. Except of course most people on the west side of the Mississippi in the St Louis region. The directional antennas take care of that for us.

Date: 2010-01-24 02:43:46 UTC
From: Radio99@aol.com
Topic: 3739 Message: 3739

Confirmed today with a Water Reclamation District Police Officer that they have switched their police ops to Starcom 21 effective this week. They were having problems with their UHF repeater (dead spots, etc). The UHF repeater will remain for other Water Reclamation District personnel.

For the Starcom 21 yahoo group, the legal name of this agency is the:

Metropolitan Water Reclamation District of Greater Chicago

3740. St Clair County and tower usage

Yahoo group: StarCom21
Date: 2010-01-25 14:39:25 UTC
From: Cris Hanna
Topic: 3740 Message: 3740

I'm playing with my scanner programming again. Has anyone heard any of the St Clair County units operate on any tower other than 359? I know that ISP operates off 359 in addition to other towers in St Clair County, just wondering if St Clair County units do the reverse?

Cris

3741. Starcom 21 TG 1426

Yahoo group: StarCom21
Date: 2010-01-26 16:16:39 UTC
From: mark_hoeny
Topic: 3741 Message: 3741

Does anyone have an idea who might be using SC21 TG 1426? I heard a few brief exchanges on this TG Tuesday morning. It seems that the users were in Chicago's Roseland neighborhood (far south side) looking for someone, and the word "fugitive" was used as one point.

SC21 TG 1426 this also comes up here in the Peo. and area systems, but for another use. Could be just an itenerate assigned radio system. Fugitive is mostly a term used by the Fed. Mar's, as I have not heard any PD's use this term.

Can I here the scanners on my I phone 3g,
If you mean the actual SC21 frequencys, NO, but I guess if someone had a system setup on there computer to patch the scanner into there website, then yes. Other than that answer, Celphones are on a given system of frequencys, and the SC21 system is not part of the same frequency's.

Can you help me? I just purchased a Radio Shack Pro 164 Triple trunking radio. Is there soft ware that has all of the frequencies and the software needed to install it on my radio from my lap top?
Thank you
Joe

3747. Re: [StarCom21] Radio Shack Pro 20-164

Yahoo group: StarCom21
Date: 2010-01-26 22:36:39 UTC
From: Rich Carlson
Topic: 3746 Message: 3747

The Pro-164 is not capable of monitoring StarCom21. SC21 is an
all-digital system, the PRO-164 does not support digital and there are
no mods or software that will make it work on this system.

As for software to program the radio for other users there is ARC300
from www.butel.nl, it works great for this and other similar radios.
There is also PSRedit300, from www.psredit.com. This works well also.

Both software packages allow you to upload systems from
RadioReference.com as long as you are a paid member there, otherwise
you will need to manually enter in the freqs or find files that have
already been created online.

Scanners and Radio software, do not enclude the frequency's, but some software will allow you do upload the frequency's from Radiorefference website, you need to pay and become a member. RR is truly a great site to find what you need in the way fo frequency's.

The FUN part about scanning is listening to it develop and figure out who the users and TGs are. The internet is a mixed blessing at times. But there are those who can't wait to figure things out on their own. Oh well, to each their own.

I caught part of the conversation too - I believe they were Motorola techs. The one going to Wisconsin was talking about gauging the performance of StarCom vs "another system" that was "commercial band" once they crossed the state line. One of them was located in McHenry county. There was also talk of "our Beloit tower" (and its directional antenna) and whatnot.

Norm Forshee passes away.

He was the long time E911 / ETSB Coordinator for St Clair County IL and responsible for major improvements to wireless 911 calls and helped with bringing the Starcom21 system to the county.

NENA Past President and Stanton Award Recipient Norm Forshee, ENP Passes Away

Posted: Wed, 01/27/2010 - 5:25pm

It is with deepest regret that NENA annouces the passing of Norman H. “Norm” Forshee, ENP after a long battle with cancer. Until his recent retirement, Norm served as the the Executive Director of the St. Clair County Illinois Emergency Telephone System Board, where he was responsible to a seven-member board managing the Enhanced 9-1-1 system, including 8 PSAPs, 93 Public Safety Agencies and 140 Telecommunicators who serve a population of more than 269,000.

Norm had 45 years of multi-disciplined experience encompassing progressive responsibilities in law enforcement and public safety communications center operations management. He demonstrated leadership and commitment to the advancement of public safety goals through national and local involvement in NENA as Illinois Chapter President, Secretary, Regional Vice-President, and National President.

In addition, he was an original member of the NENA Institute Board, the body responsible for the development and management of the Emergency Number Professional Certification Program. In 2008, Norm received the William E. Stanton Award, NENA’s highest honor, for his lifetime of service and dedication to the association and to 9-1-1.

Illinois makes small grants to fire departments

The Associated Press

(http://addthis.com/bookmark.php?v=250&pub=mianalytics)

SPRINGFIELD, Ill. -- Grants totaling $2 million are available for Illinois fire departments to purchase small equipment and protective clothing.

The Small Equipment Grant Program allows fire departments, fire protection districts and township fire departments to apply for grants up to $26,000. They may be used for firefighting coats, tools and extrication equipment.

Applications must be postmarked by Feb. 20.

Pre-dawn earthquake wakes up Illinois, rattles residents

The Associated Press

(http://addthis.com/bookmark.php?v=250&pub=mianalytics)

CHICAGO -- A small earthquake has hit northern Illinois, waking up scores of residents before dawn but causing no major damage.

The U.S. Geological Survey reports that the 4.3-magnitude earthquake hit near Virgil, about 50 miles northwest of Chicago, at 4 a.m. Wednesday.

Kane County sheriff's spokesman Lt. Pat Gengler says dispatchers have been flooded with calls from startled residents, though no injuries or damage have been reported.

- Link: U.S. Geological Survey (http://www.usgs.gov/)

Gengler says several residential and business alarms were triggered, but deputies haven't been called for assistance. He says earthquakes in the area rare.

Residents reported being shaken out of bed and finding books and tools scattered across the floor after falling from shelves.

3762. MetroEast - STARCOM down

Yahoo group: StarCom21
Date: 2010-02-11 01:21:55 UTC
From: SC21
Topic: 3762 Message: 3762

Starcom21 has been having some problems the last hour and some sites appear to still not be back up, at least according to the officers & dispatchers.

PRO96com is showing everything online around here (Edwardsville), except the mobile site (which is usual)

D18 on 155.445 CSQ
D11 on 155.545 110.0 (mobiles)

D18 dispatcher advised all comm's will be on 18A, when it comes back up.... but I have never heard them on anything besides that, so not sure what is up.

Also, comm's on ISPERN 155.475 67.0 and CSQ

There is apparently going to be another "upgrade" outage at 10PM

Also there has been a lot of encrypted comms on TG2 all evening, with RIDs of 5 and 7129.

St Clair County appears to operate as usual with their system, no issues that i've heard.

Update: 7:18 PM T325 is failed, current on sites 323 & 353, even though when I monitor the site, is appears to be online.

Lincoln 10 is trying to communicate with other units, they are on ISPERN advising they cannot get any of the 800 channels to work, they have tried all of them. Could be outage in Dist 11 area, for some radios.

Just had a chance to get online to report what I heard..

Around 7pm, D11 was telling officers that maintenance was going on the system. That it was scheduled and would happen again Thurs night around 10:30 and they should be using High Band

Apparently not every got the word ahead of time

Yes, they knew (down here at least) there was going to be an outage....

but when the brought it back online there were apparently some problems
with the microwave links.

Sites were "on-line" according to pro96.com, but according to other
sites, they were not associating.

The d11 shift commander knew all about it, but said stuff about it not
coming back like it was supposed to.

Then they announced the next outage would be at 10:15.

A little later on the announced 8:15 would be the next outage.

Personally, i have not heard my home town in over 1 1/2 hours and not on
their old UHF channel either.

Oh, btw, a license has been applied for by Glen Carbon Police department
for mobile extenders.

3767. For Sale: GRE PSR-500 Handheld Digital Scanner

Yahoo group: StarCom21
Date: 2010-02-12 05:40:49 UTC
From: dmascarella@ymail.com
Topic: 3767 Message: 3767

I have for sale a GRE PSR-500 that is in great condition and is updated to the latest firmware versions. The radio comes complete with all of the following items:

BNC Antenna
Black & Yellow Battery Trays
Set of (4) NiMH Batteries
AC Adpater / Charger
USB Programming Cable
Leather Carrying Case with Spring Clip
Documentation / CD
Box
I can email you photos

The price is $400 shipped by USPS Priority Mail to anywhere in the lower 48 states using PayPal (I will give a discount for local pick-up and cash payment - Schaumburg, IL) Please contact me for any comments, questions, and to request pictures.

Hello

I hear that Stephenson county and Freeport Police are going to switch over to starcom starting March 1. Motorola added a new repeater site on top of the State bank building. I see the new blue colored fiberglass antenna on top of the bank. Anyone have info on the site and groups that they are going to use? This site is the second site for the county. The other one being near Lena.

Take care
Spin

Just an FYI everyone.

Statutes Amended In Order of Appearance

20 ILCS 2615/11 new

20 ILCS 2615/12 new

Synopsis As Introduced
Amends the State Police Radio Act. Provides that a person receiving public safety voice or data communication transmitted via the facilities of the State's public safety radio system by wire or radio shall not, without the written authority of the originator of the communication, rebroadcast the communication via any means, including radio or Internet, or otherwise divulge or publish the existence, contents, substance, purport, effect, or meaning thereof. Provides that this provision does not apply to the public safety radio communication transmitted by any system station for the use of the general public, including Amber Alerts and other communications specifically intended for rebroadcast to the public. Provides that radio access to the public safety radio system within the State may only be accomplished upon receipt of written authorization granted by the appropriately licensed authority. Provides that a violation of these provisions is a Class A misdemeanor. Effective immediately.

3774. Riddle me this Batman??

Yahoo group: StarCom21
Date: 2010-02-20 14:44:00 UTC
From: Cris Hanna
Topic: 3774 Message: 3774

I know..way too early on Saturday morning.sorry

So I now have a GRE PSR 600 and a Uniden 396XT, some interesting differences but not the reason for the post..

But after setting up some programming and then driving to work.with both radios on, monitoring D11 traffic, seems like I would pick up the same unit on say T305 Belleville and T323 East St. Louis???

I would also see it showing up on a D13 Tower (T329 Makanda (Jackson Co IL) which is a very long way away from St Clair County, but I figured that one out after putting them side by side in a spreadsheet.305 and 329 have the same set of freqs. I know how to adjust my programming and listening on that now..but the first one is a bit odd. Or am I just hearing things? I mean I am driving to work during rush hour at the time, so I could be mistaking something.

So I guess my question would also include, Do you include "bordering" district towers for monitoring units within your District?

Hope everyone is having a great weekend

One reason I like the 996XT over the PSR600 is the GPS switching of systems.

As for neighboring towers, I always include them, it is very common for a unit to affiliate on a tower that might be farther away than the local one, but for whatever reason grabs that radio. Could be loading issues, terrain, buildings blocking signals, multipath, etc.

I have a 996 and a 996XT in my truck and occasionally will hear the same traffic from different towers at the same time due to one unit affiliated with a different tower.

My trusty old Garmin GPS-III I bought year ago. Still chugs along. No bells and whistles like the new stuff these days but it spits out GPS data to a serial port just fine!

Thry can usually be found on eBay for $50 or so, the hard part is finding the cable and then installing a DB-9 to match the radio.

Oh yeah, it can happen. When I get real close to Illinois or drive through it is not uncommon to hear the same radio transmission on more that one site/tower at the same time. I did this while doing some minor testing one day. I have about 8 sites/towers put in and if I heard a radio transmission on one TG I just hit scan and sometimes I would hear a continuation of the same traffic on one or more sites. You are not paranoid and neither is the person behind you.

3780. LaSalle County Looking at StarCom?

Yahoo group: StarCom21
Date: 2010-02-22 21:13:36 UTC
From: Mike Curtis (KC)
Topic: 3780 Message: 3780

I caught some radio tests today between a portable radio (ID 7123) calling itself "LaSalle County SO" and the LaSalle County EMA on ITTF Zone 1 (TG 30300). The portable made calls from several locations in the northern end of the county. Currently using the ClearTalk SMR system, the SO has problems on the extreme edges of the county (especially to the north) and will often fallback to their VHF frequency (155.7000 114.8) or even cell phones. I haven't seen anything in the local paper, but was wondering if anyone knew anything :)

3781. Re: [StarCom21] LaSalle County Looking at StarCom?

From: Ron Handke
Topic: 3780 Message: 3781

If there EMA is like ours, they have installed SC21 radios, while some have not actually put them into use, they have been told to do so, or turn the radio in. Don't know about the LaSalle SO. Here in Tazewell the SC21 is on 24/7 to communicate with the ILEAS office to dispatch the UC truck, which we operate out of our EMA. Thus there are weekly check ins, which some do not do. ILEAS is actually the dispatch, which some think is ITTF. You should be able to hear the check ins as the com's center is up North.

Subject: [StarCom21] LaSalle County Looking at StarCom?

I caught some radio tests today between a portable radio (ID 7123) calling itself “LaSalle County SO” and the LaSalle County EMA on ITTF Zone 1 (TG 30300). The portable made calls from several locations in the northern end of the county. Currently using the ClearTalk SMR system, the SO has problems on the extreme edges of the county (especially to the north) and will often fallback to their VHF frequency (155.7000 114.8) or even cell phones. I haven’t seen anything in the local paper, but was wondering if anyone knew anything :)

3782. SLMPD P25 to go all ENCrypted on Law TG's

I have been using a 996T for a couple of years. The other day a friend of mine bought a 996TX and said he went to public service and scanned, and found the freq. of 853.32500 and that is all he has on this scanner (for now). He set it on hold and he receives State Police districts 14, 20 and 7 (I think..E. Moline), all on this one programmed freq. I live approx. 20 miles south of him and can not receive anything on this freq. I have an outside ant. (not the best), but he is using the indoor ant. that came with the scanner. I was wondering where this tower was, or several towers, and why does he pick up all these districts on one freq.? Thanks for you input...Bill

If you live in any kind of metro area, a rubber duck type antenna may work better than an outdoor antenna due to potential overload.

The frequency you mention, according to radio reference, is located on the Askum tower, the Macomb tower and the Decatur South tower, there is a 4th tower in Southern IL as well.

Have you tried the indoor antenna that came with the scanner, perhaps scanning a closer tower?

Most likely your outdoor antenna configuration is not going to allow you to receive the Macomb tower, for distance reasons, if nothing else, unless it's an antenna designed with gain for the 800/900 MHz frequencies. I can receive the Augusta tower on an indoor antenna 15 miles away. There area between you and Macomb is fairly hilly in parts.

If the radio is programmed correctly, you should be close enough to both the Augusta and the Mt. Sterling tower's to receive either one on even the indoor antenna; the outdoor antenna should receive perhaps a bit better if it's in good condition and there are no issues with the coax cable.

Is it possible that you have the wrong frequency programmed into the scanner?

851.93750 MHz - Augusta Control Channel
851.91250MHz and 851.38750 MHz - Mt. Sterling's reported Control Channels

Hello Mike and the group,

Yes, that is the new Starcom21system site on top of the "Steward" building (old state bank center) in down town Freeport. License WQLF813 (12 stores if I remember right)
This is the second site for the county, other site is on Range road near Lena

Last I heard, the Sheriff and City PD should be switching over to it April 1st (delayed from March 1st). The Sheriff is going to link the starcom to their current VHF repeater for a bit.

I see a pending 'change' to the license: 0004135021
adding 770.89375 (30 watt) & 800.89375 (2.5 watt)

Tuesday, Mar. 02, 2010
Maryville may use outside dispatchers; workers had unionized several months ago
BY ELIZABETH DONALD - News-Democrat

(http://addthis.com/bookmark.php?v=250&pub=mianalytics)

Maryville is considering outsourcing its police and fire dispatchers, just months after the dispatchers voted to unionize.

Maryville Police Chief Rich Schardan confirmed that the village has opened discussions with Glen Carbon to outsource its police, fire and emergency dispatch services to the village next door as a cost-saving measure.

"We hate to see dispatchers lose their jobs, everyone feels that way," Schardan said, "but the economy the way it is right now, they're looking at cost-cutting ideas."

Schardan said the Maryville police officers would still patrol their own streets, but the radio dispatch would be run out of Glen Carbon's police station.

3803. St. Clair County

Yahoo group: StarCom21
Date: 2010-03-05 06:20:52 UTC
From: bgouge87
Topic: 3278 Message: 3803

Does anyone happen to know what cities in St. Clair County have not switched over to the StarCom system? I am particularly interested in Swansea. My conventional scanner picks Swansea up on their frequency, but my trunked scanner will not pick their traffic up. I directly imported the talkgroups from Radio Reference, so I am fairly confident that Swansea is correctly programmed into the scanner. Have they just not switched to digital yet?

Thanks for any help.

I assume you are referring to the Police Department?

It's possibly they may now dispatched on the County Law channels

7018 1b6a D SCC LawDisp4 Law Dispatch 4: Rural Municipalities Law Dispatch
7021 1b6d D SCC LawDisp5 Law Dispatch 5: Rural Municipalities 155.76 Patch Law Dispatch

I've heard their UHF repeater simulcasted/patched before on the TG below, but there are many unidentified uses. Based on the Radio ID's they have been law from the Belleville/Swansea/Shiloh areas.

7245 1c4d D SwanseaPolic Swansea Police Dispatch (Patch) Law Dispatch
7246 1c4e D SCC Law 7246 Law Operations (possible Swansea) Law Tac
7248 1c50 D SCC Law 7248 Law Operations Law Tac
7249 1c51 D Swans P2 c2c Swansea Police: Car-to-Car Law Tac
7252 1c54 D Bv/SwLaw7252 Belleville/Swansea: Law Ops Law Tac
7253 1c55 D Bv/SwLaw7253 Belleville/Swansea: Law Ops Law Tac
7254 1c56 D SCC Law 7254 Law Operations (E StL ?) Law Tac
7255 1c57 D Bv/SwLaw7255 Belleville/Swansea: Law Ops Law Tac

Last I heard they were outsourcing their dispatch to CENCOM and basically closing their local dispatch center. Not sure if that has happened yet or not.

I still actively hear their Fire Repeater on 155.0925. D243

I personally don't always monitor all Law activity on T359 as there is just too much activity.

Terry

Swansea PD is on Starcom however it is patched to the UHF frequency

Swansea FD is still on VHF

Swansea does its own dispatch and no plan to change; not part of Cencom

3806. Updates to CARMA Profiles and Stephenson County

Yahoo group: StarCom21
Date: 2010-03-07 20:16:11 UTC
From: Rich Carlson
Topic: 3806 Message: 3806

I took a drive to Freeport today and verified the new Site 112 with Pro96Com today. As reported on the SC212 list recently the Control Channel was 851.5875. I also verified the Alternate CC as 852.125 and the ID channel as 851.0875. The other two channels on the license (853.0750 and 853.7250) did not come up and no channel grants were seen in the 2 hours or so I was there.

I have updated the CARMA Profiles for both Starcom21 and Stephenson County.

3808. Changes to HB5194

Yahoo group: StarCom21
Date: 2010-03-10 18:18:34 UTC
From: Rich Carlson
Topic: 3808 Message: 3808

I am going to assume that our legislators have heard our voices as I have found that the proposed HB5194, (Now up for Second Reading) has appeared to have been altered with some tightened up language.

The specific changes seem to be in the second part, it now clearly states some very good language that prohibits cloning or programming system radios without authorization. This section is entirely reasonable and should be heartily endorsed by CARMA and other radio hobbyists.

The first part however still appears to ban streaming of StarCom21, and by extension other state radio systems. It is still unclear as to who could authorize the streaming, be it the State, the individual user etc.

I have calls in to my rep as well as Mr. Brady and hope to clarify or even strike the Internet streaming prohibition altogether. I don't think the states have the authority to prohibit these streams in the first place, and any type of Internet regulation like this has yet to be tested.

If you speak to your representatives about this act please remember to be civil and polite, that will go a long way to having your voice heard.

Here is the act as it appears on the State's website this morning:

HB5194 Engrossed LRB096 17146 RLC 32476 b
AN ACT concerning State government.

Be it enacted by the People of the State of Illinois, represented in the General Assembly:

Section 5. The State Police Radio Act is amended by adding Sections 11 and 12 as follows:

(20 ILCS 2615/11 new)
Sec. 11. Unauthorized rebroadcast via radio or Internet of intercepted radio communications prohibited.

(a) A person receiving public safety voice or data communication transmitted via the facilities of the State's public safety radio system by wire or radio shall not, without the written authority of the originator of the communication, rebroadcast the communication via any means, including radio or Internet, or otherwise divulge or publish the existence, contents, substance, purport, effect, or meaning thereof.

(b) This Section does not apply to the public safety radio communication transmitted by any system station for the use of the general public, including Amber Alerts and other communications specifically intended for rebroadcast to the public.
(c) Sentence. The unlawful rebroadcast of intercepted radio communications in violation of this Section is a Class A misdemeanor.

HB5194 Engrossed - 2 - LRB096 17146 RLC 32476 b

(20 ILCS 2615/12 new)
Sec. 12. Use of public safety radio system by unauthorized radios.
(a) Radio access to the public safety radio system within the State may only be accomplished upon receipt of written authorization granted by the appropriately licensed authority.
No person shall gain access to, or the ability to transmit on, a public safety radio system (i) by changing, or causing to be changed, the hardware, firmware, or software of a radio unit causing it to duplicate the identity of a radio unit operating on the system with proper authority or (ii) by cloning.
(b) Unauthorized access to the State's radio system in violation of this Section is a Class A misdemeanor.

Section 99. Effective date. This Act takes effect upon becoming law.

Date: 2010-03-10 22:05:28 UTC
From: Rich Carlson
Topic: 3808 Message: 3809

It now appears that the entire first section dealing with the
streaming of radio traffic has been removed from the bill, leaving
only the part prohibiting unauthorized transmissions.

If the bill remains as this appears to be then the scanning community
can breathe a little easier.

The remaining portions of the bill are fine, and have no impact on
lawful scanning.

While I have still not yet heard from Representative Brady directly
his office is well aware of our concerns. When I do talk to him I will
make sure what the final bill says.

Maryville dispatchers fight outsourcing plan

(http://adsys.townnews.com/c70468321/creative/theintelligencer.com/+instory2/215055-1263326402.jpg?r=http://www.theintelligencer.com/homes/)

Proposal would turn duties over to Glen Carbon

By STEVE RENSBERRY
srensberry@...

Published: Wednesday, March 10, 2010 10:51 AM CST

The union which represents four police department dispatchers in the village of Maryville is fighting a cost-cutting proposal that could mean the end of their jobs, at the same time it is negotiating its first contract after organizing only a few months ago.

Currently being discussed is a plan to outsource the village's dispatching services to Glen Carbon, which could shave off as much as $250,000 from its operating budget.

The group is represented by United Steelworkers Union District 7, which has an office in Granite City.

Maryville Police Chief Rich Schardan said discussions are very preliminary at this point, but said he understood the importance of reducing costs in a weak economy.

"It could be a substantial savings to the village," Schardan said.

Schardan said he likes having dispatchers in Maryville but said that the village has been looking at various ways of trimming costs and partnering with Glen Carbon for dispatching services is an option were the impact would be minimal.

"This was one way that won't affect the public," he said.

The precise ramifications of such a move, however, are a source of dispute.

In a letter sent last week from the dispatchers and the United Steelworkers Union, the group laid out its case for keeping the service in Maryville and called the plan a huge safety concern.

"With Glen Carbon and Maryville police on the same radio frequency being dispatched by the same facility, officers in either city conducting a warrant arrest or arresting a violent subject fear they will be unable to get through to dispatch due to excessive radio traffic and request help," the letter says.

Another fear they say is that Maryville officers would need to take people they arrest to Glen Carbon for booking, as well as reduce patrols on occasion to handle general public

requests now handled by Maryville dispatchers, in both instances leaving residents with less protection.

“The Chiefs of Police in Madison County have looked into and refused to participate in the countywide 9-1-1 consolidation,” the group said. “This is due in part to the cost of consolidation and the lack of service it provides their city. This outsourcing, although smaller, would still prove the same problems.”

The letter, sent on union letterhead, was addressed to the residents and business owners of the village of Maryville and identified as being sent by dispatchers Kristin Spaller, Jason Eberhard, Charles Richards and Erik Jones Sr.

In questioning the issue of cost-cutting, the group cited several expenditures the village has undertaken over the past year which appear to contradict the concern.

These included $600,000 for improvements to Drost Park, with reimbursement for only half; $5,000 for brick pavers next to the village hall; a 4.5 percent pay raise for the village mayor; and pay raises of between 4 and 7 percent for non-union village employees.

“Maryville can cut spending in other areas rather than cut public safety. Public safety is the only area being asked to cut costs through layoff,” the letter says.

Schardan said Maryville would not be alone in using dispatch services that are not based in its own community, citing arrangements between Hartford and Wood River and elsewhere.

From a citizen’s perspective, Schardan said people generally elect people to office with the expectation that they will conduct business in the most cost-effective manner possible.

“I think we owe that to the taxpayer,” he said.

" Maryville has had several major crimes recently. Everything from a paster being murdered during church, an Officer involved fatal shooting, and a bank robbery ! Seems like the people there would not want to take such a costly chance on this idea ! "

3811. HB5194 Followup

Yahoo group: StarCom21
Date: 2010-03-15 19:27:40 UTC
From: Rich Carlson
Topic: 3811 Message: 3811

I spoke to Representative Dan Brady's office today as well as a Lieutenant with the State Police who was their point person for HB5194. Apparently the portion of the bill regarding streaming on the Internet was in place at the request of some members of the StarCom21 governing board and was deleted after the letters from CARMA and others were received by Rep. Brady and the ISP.

The reports in the media over the weekend that say the Internet Streaming section is in place are in error, I would guess that they relied on an older version of the bill for their reports. Representative Brady had that section struck before the bill was voted upon in the House and sent to the Senate.

The remaining portion of the bill basically banning cloning of StarCom21 radios or unauthorized radio access is the ONLY part of the bill sent to the Senate, and should be passed easily there.

The bill as it stands now does not infringe on the rights of the scanning community and poses no threat for our members. I thanked Mr. Brady and the ISP for their assistance in this matter and offered our assistance if they need it in the future.

NO, there are no updates for the Radio Shack versions.
They choose to release or NOT release them on their own.

T

FOR IMMEDIATE RELEASE: GRE, Inc. & Alinco, Inc. Establish Distribution Agreement for North America for Alinco’s Electronics Division.

Belmont, CA, March 1, 2010 -GRE, Inc and Alinco, Inc. today announced an agreement under which GRE America, Inc. will distribute, offer customer support, and provide warranty and non-warranty repair for radios and amplification equipment under the Alinco brand for all of North America. Both the Amateur Radio and Radio Scanning communities will benefit from the alliance of these great companies.

Under the agreement, GRE, Inc. will be the exclusive distributor of Alinco products in Canada, USA, and Mexico and will handle all warranty service and parts orders. GRE will also provide out-of warranty service as will other currently authorized Alinco service centers.

Wayne Wilson, WR5S, Executive VP at GRE said, “Alinco is an important and popular brand in the Amateur Radio community. Alinco has regularly been an innovator and Alinco products offer great value for the features. On the GRE side, GRE remains the preferred OEM/ODM for the largest retailer of scanners and remains the #1 manufacturer of scanners for over 40 years. GRE digital trunking scanners are recognized as best performing and easiest to program and to operate. No one knows scanning receivers better than GRE.”

Wayne continued, “GRE has designed and manufactured technical products for decades. To do that successfully, we had to provide excellent customer service – GRE has a lot to bring to the GRE/Alinco alliance. With Alinco’s great products, this marriage of product and service will be quickly recognized by the Amateur Radio community. Of course, GRE will continue to develop and manufacture the world’s most popular scanning receiver products as well. Since these products share much of the same distribution chain, we see huge benefits to dealers and customers, too.”

About GRE:
Established in 1961, GRE Inc. designs, manufactures and markets the GRECOM line of analog and digital scanning receivers. Additionally, GRE is the world’s #1 largest private label Original Equipment / Original Design Manufacturer of scanning receivers. GRE also produces industrial and consumer communication and electronic products for a many of the world’s leading electronic companies and governments.

About Alinco:

Established in 1970, Alinco, Inc. manufactures radio and amplification equipment, and in the Japanese market, metal products, construction equipment, and exercise equipment. Alinco introduced their communication products into the US Market over 20 years ago.

Contact: GRE, Wayne Wilson at (650) 591-1400

Hello, I am looking for most basic / cheapeast handheld to monitor starcom system for my brother in law. He has been using one of my old 780xlt rx'r to monitor McHenry Co on their "old" simplex freq of 155.790, but would like to monitor them now on the Starcom system. Problem is that he is not very technical and does not try to be either. I have a 396d that completly confuses him and was wondering what the most basic and cheapest handheld would be to monitor McHenry Co. on Starcom. Thank you for your help. Jon

There are only essentially 2 handhelds the Uniden or the GRE. Radio Shack offers their own branded version of the GRE PSR 500 called the PRO 106. From time to time they go on sale for 399 instead of 499.

I have the GRE mobile and Uniden 396 XT handheld

In my opinion (everyone is entitled to their own), the GRE/Radio Shack scanners programming design are much more easily understood and more like the □old□ scanners

But that□s pretty much your options to monitor Starcom

The Illinois State Police will lay off more than 450 troopers and close five district offices starting in September, acting State Police director Jonathan Monken said today.

With expected retirements, the layoffs will /*r**educe */the number of sworn state troopers by /*about 600, or 30 percent,*/ Monken said. The force currently has a little over 2,000 troopers.

The five district offices are those in: *Litchfield,* with 35 sworn officers; Carmi, 33 officers; Pecatonica, 31 officers; Macomb, 32 officers; and *Chicago*, 182 officers. State police have 22 offices now.

Monken said districts were chosen for closing if other police agencies were available in the area or if crime rates in an area are relatively low.

Monken testified before a Senate appropriations committee late this afternoon.

Good morning everyone,

I'm not sure what this means for other state activities but perhaps the Starcom21 operating and maintenance costs that the state bears now will be too much and either financially struggling local jurisdictions will have to pay more to have access or worse, it also gets turned off.

Enjoy your day,
Michael

Not likely that Starcom will get turned off. It’s a contract with Motorola. Nor does the VHF radio system provide the coverage necessary. But with the layoff of that many nad the closing of 5 district offices, the amount paid to Motorola should go down.

I think we’re likely to see similar cuts in many other state departments.

Turning off Starcom is the best idea I've heard in years! Well ok, right after convicting & locking away all the crooked Illinois pols. WHEN would one EVER need to talk hand held to hand held from Rockford to Cairo? What a boondogle!

With ESMARN, IFERN, IFERN2, IREACH, & ISPERN plus the newer nationwide V, U and 800 Mz mutual aid channels how can you NOT be interoperable?
I don't care if the "big one" happens on the New Madrid fault, The nuclear plants at Cordova & Byron both go wild on the same day, or if they are rioting in the streets of Chicago, Rockford, Rock Island, and Springfield. Or if for that matter they ALL happen on the same day as the worst blizard, or the worst tornado outbreak in a generation no one will need hand held to hand held coverage from Rockford to Cairo.

Just my opinion for whatever it may be worth.

Dave,

Not sure what part of the state you live in, but here in St Clair County (Belleville and surrounding area), Starcom 21 provides true interoperability because the St Clair County CENCOM dispatchers have the capability to “patch” anyone to anyone. And it’s all invisibile to the end user. While the capability may exist to talk from one end of the state to the other, I strongly doubt that was their first and foremost goal with the system.

Truncking simply is a much more efficient use of radio systems and bandwidth. Law Enforcement, Public Works, Fire and so one are all sharing the same frequencies but the talk groups allow them all to communicate without interfering with one another and greatly expands functionality.

I’m a retired AF Medic with 22 years of Service. My last assignment was as NonCommissioned Officer In Charge of the Base Emergency Room. With old VHF band in use by the base, I could talk to security police or the base fire dept without contacting the hospital on the radio and asking them to relay a message by phone. The base has moved to a single trunked VHF radio system where I can talk when needed to the fire dept or PD and we can be patched to talk to Civilian units on Starcom should an aircraft incident occur off base. Or an incident occurs off base where assistance from the base is required.

> Not sure what part of the state you live in, but here in St Clair County (Belleville and surrounding area), Starcom 21 provides true interoperability because the St Clair County CENCOM dispatchers have the capability to â□□patchâ□□ anyone to anyone. And itâ□□s all invisibile to the end user. While the capability may exist to talk from one end of the state to the other, I strongly doubt that was their first and foremost goal with the system.
>
>
>
> Truncking simply is a much more efficient use of radio systems and bandwidth. Law Enforcement, Public Works, Fire and so one are all sharing the same frequencies but the talk groups allow them all to communicate without interfering with one another and greatly expands functionality.
>
>
>
> Iâ□□m a retired AF Medic with 22 years of Service. My last assignment was as NonCommissioned Officer In Charge of the Base Emergency Room. With old VHF band in use by the base, I could talk to security police or the base fire dept without contacting the hospital on the radio and asking them to relay a message by phone. The base has moved to a single trunked VHF radio system where I can talk when needed to the fire dept or PD and we can be patched to talk to Civilian units on Starcom should an aircraft incident occur off base. Or an incident occurs off base where assistance from the base is required.

http://www.sj-r.com/news/x1447154868/Sherifs-predict-hardship-if-troopers-cut

Sheriffs predict hardship if state troopers cut
(http://www.sj-r.com/news/x1447154868/Sherifs-predict-hardship-if-troopers-cut)

As they ramp up a crackdown, Illinois sheriff’s deputies see their jobs getting harder in dealing with methamphetamine and other problems if massive State Police layoffs become reality.

3842. CARMA Friday Nighter this week

Yahoo group: StarCom21
Date: 2010-03-31 11:56:57 UTC
From: Rich Carlson
Topic: 3842 Message: 3842

The regular CARMA Friday Nighter will be held this week at the O' Hare Oasis over I-294 starting around 7:00 PM. Your attendance is mandatory if you plan on being there.

Some of us get together at the Barnaby's Pizza in Des Plaines (Higgins and Wolf Roads across from the new radar antenna) about 5:00 before we head over to the oasis.

Wine, Women and Song will be enjoyed by all. Well at least a beer and some pizza anyway. Singing is optional, although Joel has agreed to belt out a few show tunes for us.

District 1 through 9 the first digit is the district except district Chicago which I think is just Chicago. Dist 10 is X-xray. District 11 through 22 the first 2 digits is the district. Frank units Natural Resource Police. John units Secretary of State. David-Adam Fire marshals office. Ida Investigations. Ocean is Operations. Mary is motorcycles. Henry units such district commanders I believe.

These most likely more common.

From: Dave Springer
Topic: 3843 Message: 3852

Most of them ID with their district number & their officer number ie: 7-1 would be district 7 commander. S- is always the safety education officer for the district. ie S-7 = District 7 Safety Education Officer.

Does anyone have the Agency ID'S for ISP? for example I know the DNR officers identify themselves like 3"Frank" 23.I have heard "Zebra Units"
"Adam-David" & etc. I have talkgroup ID's.

Thanks, Terry

3857. New Yahoo Features

Yahoo group: StarCom21
Date: 2010-04-01 17:07:45 UTC
From: Rich Carlson
Topic: 3857 Message: 3857

The following message was received by Yahoo Groups owners and is effective today, 1 April, 2010:

Yahoo! Groups owners:

As part of the Yahoo Updates scheduled for this afternoon, the following may affect some users Yahoo Experiences. These feature updates will make the Yahoo Experience greater and position Yahoo and its partners for future improvements.

First, Yahoo will continue to provide the excellent features we have all come to expect from its Yahoo List system. While these features remain, the names will have to change due to copyright issues. For example, Yahoo will now need to be styled as "Yahoo!" (with the exclamation point) since a copyright to the word Yahoo itself has been granted to another organization. In addition the Files Section often used on members Yahoo! Groups will now be called the "Stuff Folder". This is to reduce confusion and make it easier to find the various types of documents placed here by members.

Finally the last feature update is something that has been asked for by Group Owners for some time and we have agreed that it is worthwhile addition to the system. The Yahoo! Joint Owner Knowledge Experience system will allow Group Owners like you to share in the fees attached to various List services provided by Yahoo Groups. While the services have been free since the inception of the Yahoo Groups and its predecessors were developed, the time is right for these fees to be established.

Most members will not notice the fees as they are minimal for most users. Only those who are responsible for the most transactions will incur noticeable fees. The fee structure is as follows:

Sending Emails to a Yahoo Group will cost 1.9 cents each for messages 6 thru 25 and 2.9 cents for messages 26 and higher in any 30 day period. The first 5 messages in a month sent by an individual users are free.
Receiving individual Emails from a Yahoo Group will remain free.
Each group member will be charged 19 cents monthly, or 29 cents monthly if they have no chargeable email fees.
File Transfers will be set at 1.9 cents per MB for downloads, but are free to upload.
Photos will also be charged 1.9 cents per download and will remain free to upload.
File and Photo Previews will be expanded to allow users a better idea if they really wish to incur a fee and download the item.

Group Owners will receive 20 percent of the revenues received from these fees for Yahoo Group services. The remainder will go to Yahoo! and its partners in return for providing these services.

All fees and payments will be made through the new Yahoo! Email Service and Payment System, there is no need to sign up or register, as every email you send and receive is now counted with this system and fees and payments are automatically credited or charged to your bank accounts.

This system will go into effect as of 11:00 PM PST, April 1, 2010. Fees and payments will be posted weekly and you may view these on your bank's Online Banking sites.

We hope you enjoy the functionality of the Yahoo! Groups system as much as we have bringing the experience to you!

Sincerely,

The Yahoo Groups Team

well, if i understand that correctly it's gonna cost users $ whether or not we post a little or a lot. the amount is not the issue but once a fee is established it will certainly never go away and will most certainly go up. this will most certainly result in members leaving groups and/or not posting more than 5-messages per calendar month. if i've read this right then i know i'll be dropping membership in a lot of groups. someone...please tell me i've misinterpreted this incorretly.

3860. Re: [ScanMetroStLouis] ksdk.com Breaking News: Missouri House keeps state-run St. Louis police board

Yahoo group: StarCom21
Date: 2010-04-01 23:07:16 UTC
From: SC21
Topic: 3860 Message: 3860

Basically because this group (and all mine) are Scanning & Public Safety "related" informational groups.

Newsworthy events may be posted for others to know.

Political stuff is not allowed, although this can be taken as political if one chooses a side and opts to discuss it on here.

If that is what you mean by "pol"

If you notice, all FCC licenses for the St Louis City Police say:

Board of Police Commissioners of the Metropolitan Police Department of the City of St. Louis

Interesting info, if you've never seen this before:

The St. Louis Metropolitan Police Department is a State agency governed by the Board of Police Commissioners. The commissioners are appointed by the Governor of the State of Missouri. Their responsibility is to set policies for the department that ultimately ensure the safety and security of residents and visitors to St. Louis City.
Although the department is under the direct jurisdiction of the State of Missouri, state law requires the City of St. Louis to appropriate local general revenue funds to operate the department.

Website: http://www.slmpd.org/

So, St Louis City Fire Department, EMS and any city Public Works agencies, including Lambert Airport are not related, per se with the St Louis PD and do not specifically have any rights to use either the Analog or the P25 Digital Trunked systems, just arrangements have been made for them to do so.

Terry

Dave Springer wrote:

As a pol I'm facinated to see this. My late uncle is a retired STL city police officer, and his widow in San Diego still collects his pension. I had no idea that the city no longer controlled their own P.D.

HOWEVER, as a radio tech may I respectfully ask WHY is this on a radio board, and not on a pol board?

Tnx

sites 305 belleville and 353 caseyville

is sites 305 belleville and 353 caseyville still working?
i am not picking up any control data for either of these sites.
i have a 996t and 396t programmed according to carma sc21 file and have had no problems in the past.

I'm not picking up site 305 either , but it used to come in strong at my home in New Baden. I did notice that I lost site 301 (Mascoutah) several months ago where at one time had 5 bars on it at my house. I can't even pick it up when I drive near Mascoutah.

I had to program in sites 314 (Junction City) and 360 (Greenville) in order to listen to ISP. I also sometimes hear the Clinton County Sheriff simulcast their VHF frequency on sites 314 and 360, but since I'm on the western edge of Clinton County I don't receive them very well.

I did notice that I'm now picking up 858.9125 at my house with 4 bars, although there isn't a site ID associated with it. According to RR, this frequency is part of the StarCom21 system, but registered to DeQuoin.

At this point I'm not really sure what's going on with StarCom21 in eastern St.Clair or western Clinton counties. It doesn't appear that I'm picking up any nearby StarCom21 towers anymore, but clearly ISP is communicating on this system without any problem. I just completed another scan between 760 and 870 MHz and the only system I'm picking up with a

strong signal is site 359, but that's the St. Clair simulcast system that our scanners can't decode very well.

(http://forums.radioreference.com/illinois-radio-discussion-forum/177099-sites-305-belleville-353-caseyville.html#)

yeah 301 has been off the air for a while..... haven't been able to get 305 lately, but I thought it was showing up was a neighbor still on pro96com. 353 was on air last I knew. maybe 301 equipment is being moved to nashville and 353 to maryville?

3863. Ashton SC21 site

Yahoo group: StarCom21
Date: 2010-04-03 03:38:17 UTC
From: n9jig
Topic: 3863 Message: 3863

According to the RR StarCom21 page there is a "Site 149" at Ashton (Lee County) using 851.7500, 852.2125, 853.1875 and 853.8375. The GPS coordinates however place the site in Macon County, south of Decatur.

I found no licenses to support either of these locations.

I stopped by Ashton today and the site there (105) was using only its regular 700 MHz. channels, no activity at all was heard on any of these supposed 800 MHz. channels.

Can anyone shed some light on the info, such as where it came and if there is any supporting information on it?

This is the license application:

http://wireless2.fcc.gov/UlsApp/ApplicationSearch/applMain.jsp?applID=5389068

For "Lee County"

Eligibility
90.621 APPLICANT IS A COUNTY POLICE AGENCY

It is still "Pending" with the FCC.

OK, well somehow the GPS coordinates on RR got transcribed wrong. The decimal version is more like 41.852925,-89.226065. This is the current Site 105 at the ITHA tower near Ashton, so it is possible that they could just add 800 freqs to the the existing Site 105 or create a new parallel site.

Has 149 been confirmed as the Site ID? I had heard that a new Rockford simulcast site would get that number, but you never know until it is on the air.

3867. State Police Say Sheriff's Department Access Won't Save Jobs

State Police Say Sheriff's Department Access Won't Save...

(http://illinoishomepage.net/common/printerfriendly.php?cid=140951)

(http://www.addthis.com/bookmark.php)

Friday, Apr 2, 2010 @09:51am CDT

(Springfield) -- Illinois State Police say an offer from the Macoupin county Sheriff's Department to use their facilities is generous, but it wont likely save any jobs.
Governor Quinn's budget proposal includes cutting funding to the department, resulting in up to 600 fewer troopers across the state.
ISP Spokesperson says facilities are not the problem, they simply just won't have enough money to pay troopers.
Along with the reduction in troopers, the funding cuts would also mean closing up to five district headquarters, including the one in Litchfield, which includes Macoupin County in it.
Communications personnel will continue to work out of those buildings, and troopers would have access to them although none would be stationed there.
County and Local police will likely shoulder the load of calls that State police currently respond to if the cuts go through.

The original GPS coordinates were the inherited coordinates for the whole system. Right around decatur is the centerpoint for a radius (Circle) of 225 miles that cover all of Illinois. I've updated to approximate area right now.

No confirmation on site #, was just a guess.

Assuming it will be part of starcom21 because of the emission designator on the pending application.

It does not matter where you live. You need 2 things to program your scanner easily.

1. WIN500 or other compatible software.
2. A premium subscription to Radio reference.

Doing it any other way will not be easy and leave you frustrated.

Location is not important to the actual programming

It is important in terms of the assistance that can be rendered

It□s a new way to do this, and for some people..it just doesn□t fall in
place as easy as it does for others

If they are close by, maybe spending 30 minutes with them gets them on their
way. Could be as simple as needing help with the USB Cable setup

Sometimes the personal touch is required

I□ve already done this for a couple of folks

I guess that would be great, but even when asking, Hey could you share the data you have programed for a given general area, most and even going so far as to say, do not get a reply, seems that request fall on deaf ears !
There is many that live out in the middle of no-where, it is not like living where there are 20-30 scanner guys close by.

thanks rich

the old Decatur trs system is use by all dept. in the city but police and fire (streets, water, sewer ect.) i have heard some storm spotters on it.

i may need some help setting up a ltr standard system. the way i have it now i do not hear anything.

Don't know about Lifestar but I'd be shocked if they are using Starcom21 as their primary

MedStar Ambulance And Abbott LifeForce Ambulance in St Clair County both can communicate with the PSAP on what's called "county calling".kind of like IREACH but on St Clair County's Simulcast System, but they still use their conventional systems for dispatching and day to day operations.doubt that will change

Since Marion Co Sheriff and Centrailia are not using Starcom for communications, not likely that LifeStar would have any need to be on it for interoperability

I posted this last night after approving the original message, but looks like it didn't get through.

As far as I know, nothing has changed; Lifestar in Alton is still on 800 MHz LTR as is Springfield & Jacksonville. The Alton rig's radios have the capabilities to use talkgroups (and assuming towers) from the other divisions (areas)

From the Marion Co IL RadioReference.com page:

Lifestar Ambulance (Centralia)

"Centralia Dispatch" also dispatches for Alton Division <http://radioreference.com/modules.php?name=RR&ctid=650> & Springfield/Jacksonville Division <http://radioreference.com/modules.php?name=RR&aid=1995> Call Sign heard on KLL TRS (Alton) was WSW288?

3888. IL Statewide Interoperability Plans, etc.

Yahoo group: StarCom21
Date: 2010-04-18 21:55:34 UTC
From: Kevin O'Rourke
Topic: 3888 Message: 3888

I came across an Illinois Emergency Management Agency (IEMA) web page http://www.iema.illinois.gov/SCIP.asp that contains links to Illinois statewide interop communications plans that will be of interest to most Illinois scanning hobbyists:

- Statewide Communications Interoperability Plan (SCIP) - this was published last April and has been previously mentioned on the CARMA Yahoo Group - http://www.iema.illinois.gov/iema/SCIP/SCIP.pdf

- Statewide Tactical Interoperable Communications Plan (TICP) - this was published just last month and contains info on interoperable systems and frequencies (including Starcom21 talkgroups). This document is a work in progress and does not as of yet include the various appendices that are referenced in the main document - http://www.iema.illinois.gov/iema/SCIP/TICP.pdf

Finally, you might also be interested in the Illinois Terrorism Task Force (ITTF) 2009 Annual Report (issued on 3/1/10) - it can be found at http://tinyurl.com/yyr3gon .

Enjoy!

From: Wayne Cornick
Topic: 3884 Message: 3890

Phone calls are routed to the Centralia office for dispatch to the appropriate location via LTR sites and links located in Salem, Trenton, Collinsville, Butler, Jacksonville and Springfield Illinois.

The C-MED and VHF frequencies are used, mainly, around their Centralia office.

Topic: 3895 Message: 3895

This is not StarCom related but I thought I would ask this group first. Took a quick trip to Chicago yesterday and heard absolutely nothing on the CFD-EMS frequencies (460.600 and 460.625) Am I guessing right that they have switched to the digital 477MHz frequencies now? Sorry to sound dumb. I have not been up to Chicago for a year and a half.

Thanks to all. Jeff

From:

Mike Vander Veer

Reply-To:

PRO96COM@yahoogroups.com

To:

PRO96COM@yahoogroups.com

I've uploaded Pro96Com Version 1.9.3 to the web site at
http://www.psredit.com/pro96com. Release notes follow:

Version 1.9.3
---

* If you switch from one site to another on the same system (i.e. the
SID does not change), Pro96Com will no longer reload the talkgroup
and Radio ID data. The new site information will be loaded from
the computer's hard drive, but the Talkgroup and Radio ID data will
be preserved. Switching sites is much faster now.

* Added filtering for MA-COM/Harris packet type 0x33, which contains
nothing more than the control channel identifier table and channel
entry.

* Made modifications to the screen resizing processing to keep the
group boxes and read radio data button on the screen at all times.

* Set minimum screen size to 550 x 550, since the value of the
displayed data on anything smaller than that is extremely limited.

Mike

3900. Additional Court Fee bill would spare Illinois State Police cuts

Yahoo group: StarCom21
Date: 2010-05-05 16:54:02 UTC
From: SC21
Topic: 3900 Message: 3900

State troopers facing layoffs throughout the state could get a reprieve if lawmakers follow through this week.

The House voted 117-0 for Senate Bill 3695 Tuesday, which would double the fees charged in court for administrative processing and place the proceeds in the State Police Operations Assistance Fund. The measure now heads to the Senate.

The new fee would add $1-15 to any conviction in court or if court supervision is given. The amount of the fee is set by each county.

He is looking for the PRIMARY control channels, not the alternates.

These have not been listed on RadioReference.com since we've found most of them.

We just have all 3 (primary + 2 alt) all listed as primary.

Thanks for the help.

Terry

Subject: Re: [StarCom21] Starcom21 Primary Control Channels

He is looking for the PRIMARY control channels, not the alternates.

These have not been listed on RadioReference.com since we've found most of them.

We just have all 3 (primary + 2 alt) all listed as primary.

Thanks for the help.

Terry

New Research Tracks 700 MHz In-Building Signal Penetration
May 05, 2010

In March, the National Institute of Standards and Technology (NIST) released the sixth in a series of NIST technical notes on penetration of 700 MHz radio signals into large building structures, including apartment complexes, hotels, office buildings, sports stadiums and shopping malls. The reports are intended to give emergency responders and system designers a better understanding of what to expect from the radio propagation environment in emergency response situations.

In the most recent technical note, measurements were carried out in the 750 MHz frequency band. Because the FCC is in the process of auctioning the D block spectrum with plans for public-safety use, NIST researchers studied radio signal penetration in this frequency band into four different large building structures: a convention center, a high-rise office building, a laboratory/office building and an apartment building.

A fundamental challenge to radio communications into and out of large buildings is the strong attenuation of radio signals caused by losses and scattering in a building’s materials and structures. A second issue is the large amount of signal variability because of multipath that occurs throughout the large structures.
Following are photos of the buildings where the r

From: n9jig
Topic: 3901 Message: 3909

I was told once that there really is no such thing as a Primary Control Channel on a APCO25 system, that any of the assigned control channels have equal priority, and that they only change when there is a fault detected by the controller or by a tech manually changing it at the controller. Most sites have 2, 3 or 4.

If this is accurate then you should have all the control channels programmed in the radio.

From what I've seen the sites certainly have an affinity for one control channel versus the rest of them :) (But no way should you not include the alternate control channels in a system)

3917. MADISON Co - Maryville Fire to migrate to SC21

Yahoo group: StarCom21
Date: 2010-05-14 03:50:19 UTC
From: SC21
Topic: 3917 Message: 3917

Been wondering when Glen Carbon Fire was going to do this, but now....

Madison County 911 Fire frequency (154.43 167.9 PL) is often over-used and has people paging over top of each other or agencies paging while another is on-scene with no fireground channel.

Currently Maryville and Troy FPD have a mutual aid agreement and it is still in the works for Maryville Police to be dispatched by Glen Carbon Police, since Maryville Fire is also dispatched locally, it would assume Glen Carbon will page Maryville Fire too...

The village of Glen Carbon was the first municipality outside of St Clair County to move to Starcom21 some years ago.

http://www.theintelligencer.com/articles/2010/05/13/local_news/doc4bec21295c30f128253238.txt

Maryville Fire Chief Kevin Flaugher reported recently that they were among the recipients of an Assistance to Firefighters Grant made
possible through the Federal Emergency Management Agency in cooperation with the U.S. Fire Administration.

Flaugher, speaking at the village board meeting on May 5, said the money will go toward equipment
purchases and changeover to the Starcom digital radio system.

Madison County, the Illinois State Police and some other communities have already switched over to the new system.

Other grant recipients such as Collinsville and Troy are also planning to purchase new radio equipment.

The village was informed by the office of U.S. Congressman John Shimkus that it had received the grant.

Flaugher said the system will put them at the top in terms of communication capability in the county, but that they will be keeping their current
analog system for paging purposes and in cases where they need to communicate in places that do not use the Starcom system.

1076 is a Talkgroup ID, not a frequency. Add it to a Group, not a System.

On a 396T Trunked Frequencies go in a System, Talkgroups go into Groups.

Subject: Re: [StarCom21] DEC

1076 is a Talkgroup ID, not a frequency. Add it to a Group, not a System.

On a 396T Trunked Frequencies go in a System, Talkgroups go into Groups.

The simplest way to do this is to consider a premium membership to Radio Reference and then get the programming software for your scanner. I have an 396XT and prefer FreeScan but there are others that offer trial versions.

Trying to program these by hand is very time consuming and can be frustrating and you may just give up.

Here is how to do it manually:

Menu
Program System
Select the system you want
Select Edit Group
Select the group you want or select New Group
Select Edit Channel
Select New Channel
Press in the TGID (1076 in this instance)
Edit Name
Make the name what you want it to be
Hit Scan

If you are a Premium member of RadioReference then you would use the programming software (ARC396, FreeScan) etc. and connect to RR by use of your RR password and user name, then select the state and system etc.

Are you sure you are in a Group of a P25 trunked system? It appears here
that you are in a conventional system or programming where the trunked
system freqs go.

From: dataman60435
Topic: 3918 Message: 3927

You seem to be starting with "New System"??...You need to go to the Starcom System you already programmed, hold on one of the TG's you have programmed, press"E", when it says "name channel", use the scroll knob to go back (counter-clockwise)one notch to "new channel" and put in 1076-"E", then press "hold" and you will be holding on the new TG, new feature in the 396XT....The easy way to install a new TG...

3929. Ogle County Adding Channels to Sites 124 and 136?

Yahoo group: StarCom21
Date: 2010-05-16 18:53:39 UTC
From: Mike Curtis (KC)
Topic: 3929 Message: 3929

In the FCC weekly grants post I noticed the following -

http://wireless2.fcc.gov/UlsApp/UlsSearch/licenseFreqSum.jsp?licKey=3197333

It looks like 852.5625 is being added to Site 124 (Forreston) and 853.1625 to Site 136 (Rochelle). The Site 136 is interesting since it's currently a 700 MHz only site.

3930. T105 (Ashton) New 800 MHz Channels

Yahoo group: StarCom21
Date: 2010-05-16 20:58:09 UTC
From: Mike Curtis (KC)
Topic: 3930 Message: 3930

It looks like at least one of the 800 MHz channels that were licensed to this site are in use. T105 (Ashton) is showing a current control channel of 852.21250 as a neighbor of T134. I can only assume 851.75000, 853.18750, and 853.83750 are (or are going to be) active soon.

June 03, 2010 8:18 PM

By KEVIN LEE and JENNIFER WESSNER

Illinois Statehouse News

SPRINGFIELD — Gov. Pat Quinn may help bolster the budget of the Illinois State Police — on the backs of local and county governments.

Quinn is considering a proposal passed by the General Assembly that would mandate that county clerks collect new fees from guilty defendants in felonies, misdemeanors, traffic violations and civil cases.

The proceeds would go toward a new fund specifically created for the Illinois State Police.

The Illinois House passed SB 3695 unanimously, while Senate Democrats pushed the proposal through on a mostly partisan vote.

State Rep. Jim Sacia, R-Pecatonica, a former FBI agent, said the new fees would provide a boost to the state agency.

"It will generate approximately $22 million a year," Sacia said, "That will be put in a lock box fund to assist in funding the Illinois State Police officers who were scheduled to be laid off."

The new funding source could help the ISP maintain its current level of state troopers.

In March, ISP acting director Jonathon Monken testified to lawmakers that his agency was considering laying off nearly one-fourth of the approximately 2,000 state troopers on patrol because of the state's budget woes.

Monken added that his agency had lined up five of the ISP's 21 district offices for closure — Carmi, Litchfield, Des Plaines, Pecatonica and Macomb.

County clerks who are responsible for setting and collecting the fees are concerned that funds are being siphoned away from local governments who are also struggling in the difficult economy.

Barbara Brown, circuit court clerk for Randolph County, said redirecting funds to the State Police will make it difficult for local police departments around the state.

"By the time you get to the point where the money gets distributed to local arresting agencies, these aren't large sums of money they're receiving anyway," Brown said. "And everybody is having to make every dollar count, so when you lose even a small amount of your revenue flow, that's impacting those municipal governments."

State Sen. Tim Bivins, R-Dixon, said he and many of his Senate colleagues voted against the proposal because they realized the bill could have unintended consequences on local counties.

"When the bill came to the floor for a vote, there was a concern about it taking money away from the locals, and that was of concern," Bivins said, "I think that’s why it garnered a lot of "no" votes on that particular bill."

Quinn has not given an indication on when he would consider the new ISP fund, but Sacia expects the governor to sign the proposal into law.

"Gov. Quinn said where ever the cuts are going to be," Sacia said, "I’m not going to cut public safety. So we pass legislation solely for the purpose of keeping the State Police, I would be very, very disappointed if we didn’t do that."

I believe that TG 1429 might be related to 1426, 1427 and 1428 - heard mention of looking for an "AWOL" individual yesterday on that TG. Unit IDs prefixes noted were "Adam" and "Ida".

Also, heard what I think was a K22-xxx unit calling "Control" on TG 4501 yesterday.

I work from home and usually have 2 scanners on for just StarCom (both on T134). One has my local ISP district and the other with the local ISP district locked out :) I also have Pro96Com running to that I glance at occasionally to see if I'm missing anything interesting.

Recommended for NON-simulcast systems by me and others.

Terry

(although I get it to work fine on St Clair County and St Louis City simulcast systems)

If you buy online and go to the Radio Shack website through CouponCabin (see link in the discussion at Radio Ref link below), you will save $45 in addition to the sale price, making the total cost just over $300 for 106/197. See here for details:

http://forums.radioreference.com/radio-shack-scanners/182492-radio-shack-scanners-go-sale-6-6-10-a.html

I also strongly agree that the GRE500/RS106 are poor on Starcom multisite-simulcast systems, im not being biased but my uniden 396XT will sit rite next to the other models and be perfect coverage of the Chicago area towers and the GRE/RS model will only be flickering and constantly cutting out....I must say you need to be in a perfect spot for good coverage....I took the GRE500 down state and on the stand alone towers it was perfect....This is my Opinion from over a year comparison....Ron in joliet

I can't say if the radioshack version is prone to it or not, but the GRE's do have a fairly sensitive front end so if you're in a major metro area..it can get a bit overloaded. I have a GRE600 and a 396XT I live in St Claire County IL which has a multisite simulcast system and have no problem with the 600 picking up all the users on that system but then I've found it better to turn ROAMING to OFF when programming it.

I heard some traffic this afternoon on SC21 talkgroup 1426. One user asked another to give the Chicago Heights parole office a call. Looking at the IL Dept. of Corrections institutions web page http://www.idoc.state.il.us/subsections/facilities/instaddress.asp I see a whole bunch of parole offices listed. I'm thinking this is who is using TGs 1426-1429 in the Chicago area.

Now to figure out which office or region uses which talkgroups and how they are labeled in their radios!

3959. StarCom21 Questions

Yahoo group: StarCom21
Date: 2010-06-08 21:27:26 UTC
From: train_radio_guy
Topic: 3959 Message: 3959

I've got a few newbie questions for the group. I've been out of the radio mix for 5 years or so, and I'm a little behind on the whole StarCom21 system. I understand it's a state-run radio system, which operates in the 700 MHz area, is trunked & digital.

1. However does it following the APCO-25 protocols, which were discussed at length after 9/11?

2. Where is a good place to start, for a primer on the system (i.e. frequencies, talk groups, operation, etc...)?

3. I frequently travel between Rockford, Bloomington/Normal, & Peoria, and consequently would like to get a mobile/base receiver/scanner, with the capacity & capability to cover the many agencies I traverse. Any suggestions?

I hope this isn't too presumptuous, to ask so many questions, but I'm anxious to get-up-to-speed on things, and have found that a lot of the local agencies, have migrated away from their traditionally conventional systems.

Any help or suggestion would be greatly appreciated.

Yes, it is fully P25 compliant. (9600 baud control data, P-25 audio
and signalling etc.)
>
> 2. Where is a good place to start, for a primer on the system (i.e. frequencies, talk groups, operation, etc...)?

RadioReference and the CARMA Profiles have good descriptions of the
layout of the system and how it works.
>
> 3. I frequently travel between Rockford, Bloomington/Normal, & Peoria, and consequently would like to get a mobile/base receiver/scanner, with the capacity & capability to cover the many agencies I traverse. Any suggestions?

I suggest the BCD-996XT, connected to a GPS unit. Download the CARMA
Programming files and just turn on the radio. No selecting systems or
fiddling with the radio, we did all the work for you.

Traffic on TGs 5001 and 5002 continues into the night (11pm) - hearing what I believe to be "TOC" (base?, encrypted) and various field teams using alpha IDs (NOVEMBER, OSCAR, PAPA, QUEBEC, etc.) in the clear. I have to believe this might be part of some exercise. One field team was holding at the gates to Argonne Labs, one or more teams went to Midway Airport for the report of a "hit at G9" and then a team searched the Sears aircraft hanger there. Also heard references to triage. All being heard on site 102....

3968. SC 21 New TG

Yahoo group: StarCom21
Date: 2010-06-10 13:09:48 UTC
From: mark_hoeny
Topic: 3968 Message: 3968

I heard the tail end of what appeared to be one side of an informal conversation on TG 7802 as I turned the radio on this morning. TG Not listed in RR or CARMA Starcom databases.

Mark

3969. SC21 TG 1429 IDd as "North 1"

Yahoo group: StarCom21
Date: 2010-06-10 16:15:22 UTC
From: mark_hoeny
Topic: 3969 Message: 3969

Just heard Starcom 21 talkgroup 1429 IDd by a user as "North 1". This TG is thought to be in use by IDOC parole agents or other corrections personnel.

Mark

3970. SC21 TG 1430

Yahoo group: StarCom21
Date: 2010-06-12 18:44:19 UTC
From: mark_hoeny
Topic: 3970 Message: 3970

Heard a brief and informal exchange on Starcom 21 talkgroup 1430 via Site 102. This is a new one for me, and I'm guessing that it is used by the same type of folks (parole agents, etc.) I've been hearing on talkgroups 1426 and 1429.

Mark

3971. SC21 TG 7802 user identified?

Yahoo group: StarCom21
Date: 2010-06-12 23:37:47 UTC
From: mark_hoeny
Topic: 3971 Message: 3971

I heard a corrections (K22-xyy) unit come up on SC21 TG 7802 this afternoon and call another IDOC unit. Problem is that he IDd the channel as "SOSU N1", which (according to recent monitoring) seems to be TG 1429, so it appears that he was on the wrong channel. I had 7802 in my notes as 'user unknown' - I'm guessing now that it is likely used by corrections.

Chris,

What you were listening to was a local Starcom site with a D13 unit associated to it. Whatever unit was on the traffic stop was also accessing a tower local to him. The system then sent the radio traffic to wherever it was needed, meaning wherever a D13 unit was listening.

Are you hearing a D-11 tower – ID'd as such – or just D-11 traffic???

I can "bring up" D-22 (or any other district for that matter) on my StarCom portable by affiliating it with a D-05 tower local to me… And everyone else listening to that D-05 tower will hear what I do – until I turn it back off, or cancel the affiliation with D-22…

What everyone is trying to say is it's not "DX" propagation you're hearing, but more likely that an out-of-district unit may be affiliated with a tower local to you.

Because I am employed by the State, I am prohibited from going into details regarding the StarCom system and how it operates. I will try to work with Will, Rich, and others to come up with something for publication that does not compromise the security and integrity of the system if necessary. This may take some time. But below is the simplest manner in which I can describe how it works (and Rich has made this same analogy in the past. It seems some people just can't grasp how a multi-site trunking system works in the RF world.)

The basic thing to remember is: if you are hearing something from outside the "normal" area of operations, it is MOST LIKELY because someone from that new area is traveling through your neighborhood and has affiliated with the tower. Once they leave, the signals will leave as well. So time is the key - if you are hearing a distant location for an extended period of time, then it may well be troposhperic ducting or some other form of DX propagation. If not, it was someone because was traveling through and affiliated with that particular tower.

Skip works both ways too. When conditions are right then units in their home area can sometimes affiliate with a tower near you :) Here on T134 in Ottawa we'll often get units from the south and the southeast (Typically an area from Normal to over near Pesotum) affiliating with the tower in the hours after sunrise in the summer. The ISP "A" talkgroups will affiliate and you'll see a whole slew of denied affiliations for McLean county talkgroups, "B" talkgroups, and other, more regional talkgroups.

Individual users (other than specialized techs) have no way of selecting specific towers with their radios, the radio affiliates to a local tower automatically and the communications are sent on that tower and any other that has a radio affiliated with it on that talkgroup.

As Mark and others pointed out the reason one might hear distant traffic is because a radio affiliates with a local tower on that talkgroup assigned to the distant post. For now, most ISP talkgroups will work on any Starcom21 tower, they can be locked out of specified towers by system programmers if it becomes an issue with channel loading.

System radios can however SEE what tower they are affiliated with by a "Site" button on their radio, they can not change it.

Topic: 3989 Message: 3989

Lately a USAR TF-1 radio has been affiliating with this talkgroup (4829) and I caught parts of a transmission this morning between a TF-1 "comm" unit and another TF-1 radio. I'm wondering if this is the "USAR" talkgroup referenced in some documents I read last year about some "new MABAS talkgroups" that were in the planning stages - "TRT", "Haz-Mat", "USAR", "IMT", and "Admin".

3990. Starcom21 map updated

Yahoo group: StarCom21
Date: 2010-06-22 17:55:18 UTC
From: citrus801
Topic: 3990 Message: 3990

I updated the Starcom21 map with the latest info from the CARMA profile:
http://wiki.radioreference.com/index.php/Image:Starcom21_Site_Numbers_Map.jpg

If anything is outdated, send me an email and I'll get it corrected.

3991. "Stale" Sites? (StarCom Failue?)

Yahoo group: StarCom21
Date: 2010-06-22 22:36:33 UTC
From: Mike Curtis (KC)
Topic: 3991 Message: 3991

For the last couple of hours, T134 (Ottawa) has been showing up in Pro96Com with a Status of "ST!". For adjacent sites, it shows -

T101 Connected, Stale

T105 Connected, Stale

T113 Connected, Stale

T125 Connected, Stale

T131 Failed, Stale

T136 Connected, Stale

T142 Failed, Stale

T147 Connected, Stale

Radios are affiliating, including ones that shouldn't (talkgroups that aren't allowed on T134) but voice traffic is few and far between

3992. T134 On Site Trunking Again

Yahoo group: StarCom21
Date: 2010-06-23 17:12:20 UTC
From: Mike Curtis (KC)
Topic: 3992 Message: 3992

T134 (Ottawa) has been on Site Trunking for the better part of the last 24 hours. The site has a control channel and is taking affiliations but the dispatchers can't tell when people are talking on it. An odd thing, watching in Pro96Com, is it throwing out the CWIDs (there are 2) every minute or so.

ISP D17 is using HF4 (155.4600 67.0) when they can't use StarCom.

3993. TGs 1651 and 1852 - Stephenson County?

Yahoo group: StarCom21
Date: 2010-06-26 06:00:40 UTC
From: Mike Curtis (KC)
Topic: 3993 Message: 3993

I was up in Rockford for a few minutes tonight and caught traffic on talkgroups 1651 and 1852 on T111 (Rockford). 1651 had a dispatcher and 1852 sounded like car-to-car traffic doing some sort of perimeter search. I didn't catch street names, but I believe the units on 1852 had a prefix of "55-". Radio IDs on both talkgroups were in the 70xxx range even though the talkgroups were "far apart" (could one of them be programmed wrong in their radios?)

I also caught a brief exchange between a "Bravo" and "Edward" unit on talkgroup 1751 with radio IDs in the 297xxx range.

3995. 775.85625 in use

Yahoo group: StarCom21
Date: 2010-06-29 18:03:11 UTC
From: SC21
Topic: 3995 Message: 3995

775.85625 in use today, sounds like a couple mobile units, unsure of location.

NAC is 61F and the tag of this channel is 7TAC89D

Casual talk, units dont appear to be from this area.

Heard in Glen Carbon (Madison County)

3996. TG's today on SC21 - T325

Yahoo group: StarCom21
Date: 2010-07-01 00:32:30 UTC
From: SC21
Topic: 3996 Message: 3996

pro96com detected this today on T325 (Edwardsville-Madison Co):

1102 McHenry County Sheriff Statewide (RID 32207)
1120 McHenry County Corrections Transport (RID 32019)

Very interesting!!!

Also
4501 Department of Corrections (K22?) RID's of 350005, 350006, 770006

4933 IDPH "EMS Channel B" 427113

Also, lately IDPH Region 4 has been using their TG now for Roll Calls, instead of the local Hospital Net TG on St Clair Counties system. Of course, it is completely encrypted.

Terry

3997. State Police to keep all districts open

State Police to keep all districts open

<http://www.thetelegraph.com/news/district-42117-state-open.html#slComments>District 18 HQs in Litchfield among those threatened

SPRINGFIELD - A spokesman for the Illinois State Police confirmed late Friday that the agency's five district headquarters scheduled for closure this fall, including District 18 in Litchfield, will remain open.

Capt. Scott Compton had said earlier Friday that ISP Director Jonathon Monken and other agency officials still were reviewing the ramifications of the state budget that Gov. Pat Quinn announced Thursday. Compton then disclosed late in the day that the decision had been made to keep the district offices open.

From: Rich Carlson
Topic: 3999 Message: 3999

Please be sure to join us for the July 10, 2010 CARMA Meeting at Phillies Pizza, 63rd and Kingery Hwy (IL-83) in Willowbrook, IL. The meeting starts at 1:00 PM but please be sure to arrive by Noon so you can finish your lunch before we start.

There will be a special display at this meeting of a new product that I am sure you all will be excited by!

Remember to park on the west side of the building, not in front. Bring your for-sale items, handouts, appetites and friends!

Phillies has been great to us, the food is awesome and the service is better. Please remember our friend Marion!

I think the radio techs either made a mistake or assigned really funky talkgroup numbers to them. I had to double-check what I was typing was right, but that's what was logged.

From Pro96Com -

"06/25 21:24:17","Group","00-0421","853.63750"," 1852","T: 111 DT: 6/25/10@21:24","70117","TG: 1852 DT: 6/25/10@21:24"

"06/25 21:24:23","Group","00-0041","851.26250"," 1852","T: 111 DT: 6/25/10@21:24","70105","TG: 1852 DT: 6/25/10@21:24"

"06/25 21:24:26","Group","00-0461","853.88750"," 1852","T: 111 DT: 6/25/10@21:24","70117","TG: 1852 DT: 6/25/10@21:24"

4006. Starcom 21 TG 4502 IDd as "TAC 2"

Yahoo group: StarCom21
Date: 2010-07-07 17:57:13 UTC
From: mark_hoeny
Topic: 4006 Message: 4006

Heard a couple of IL Corrections (parole?) units on TG 1429 (SOSU North 1) switch over to TG 4502 - one of them called this talkgroup "TAC 2".

Mark

4007. TG 4876 and 4877

Yahoo group: StarCom21
Date: 2010-07-09 20:48:06 UTC
From: Paul
Topic: 4007 Message: 4007

Heard some brief traffic this afternoon on these two TG. I have no idea who it was but their radio IDs were i431001 and i431008. Any idea who it may be?

4008. Re: TG 4876 and 4877

Yahoo group: StarCom21
Date: 2010-07-09 21:00:41 UTC
From: Paul
Topic: 4007 Message: 4008

BTW, I heard it on Chicago - South Tower.

Hello all...
My father could use some help. He is trying to get the new system ID#s and frequency numbers for Ameren IP in the LaSalle area. I have found them online, but must be old ones as they are not working. Any help would be appreciated.
Thanks, Sandi

Put something in the subject line or it will be tagged as spam, then go to
the Carma group & download the pdf. It has everything for starcom21

Ameren is on the StarCom system. In LaSalle, the closest tower is T131.

TG 4228 is the electric side

TG 4233 is the gas side

4013. Shiloh PD to be dispatched by City of OFallon

Yahoo group: StarCom21
Date: 2010-07-11 03:42:20 UTC
From: Cris Hanna
Topic: 4013 Message: 4013

Has been dispatched for many years by St Clair County CENCOM, but due to increased fees by CENCOM, Shiloh PD when looking at other options. OFallon PD made them a better offer. OFallon has moved over to St Clair County's P25 Simulcast system several months ago, so I expect Shiloh units will now be heard on OFallon PD Talk Groups. No exact start date yet.

Source: The guy in the cube next to me is an OFallon City Councilman ;-) which led me to this from the Belleville News Democrat
http://www.bnd.com/2010/06/11/1289197/911-what-is-your-problem.html

4014. Joliet Junior College Back On StarCom

Yahoo group: StarCom21
Date: 2010-07-12 17:02:12 UTC
From: Mike Curtis (KC)
Topic: 4014 Message: 4014

Seems that the Joliet Junior College PD is back on StarCom. In my travels through the area in the past week I've picked up regular comms on their 1601 talkgroup. I know they moved from StarCom to the Joliet TRS a few months ago but it appears they're back.

4015. Re: Joliet Junior College Back On StarCom

Litchfield-based trooper named officer of the year
(http://www.sj-r.com/news/x1953792607/Litchfield-based-trooper-named-officer-of-the-year)

By RHYS SAUNDERS

THE STATE JOURNAL-REGISTER

Posted Jul 23, 2010 @ 11:39 PM

LITCHFIELD — A Litchfield-based Illinois State Police trooper has been named the agency's officer of the year.

Jeremy Walk, who has been a trooper for about 11 years, was also surprised last week when he was assigned a new 2010 Ford Crown Victoria squad car at the district headquarters.

"I was surprised and honored," Walk said.

"I thank God, my family, co-workers and supervisors. It was a surprise to me, and I'm sure there are several other deserving people in the state."

Administrators said Walk is a top performer and lead Control and Arrest Tactics instructor for state police District 18, always looking for ways to improve training. Walk was able to find more suitable buildings for training that didn't cost the district any money.

Congress Questions Limited Source of Radio Gear
(http://www.911dispatch.com/2010/07/congress-questions-limited-source-of-radio-gear/)

Posted:

Public safety agencies have had to rely on “an exclusive or limited vendor pool for (radio) equipment and devices,” according to a Congressman’s letter to the Federal Communications Commission (FCC) asking the commission to clarify the current radio equipment marketplace, and how proprietary gear might affect interoperability, innovation or costs. In its response to Rep. [...]

During Chicago-area exercises involving the Illinois National Guard a few months ago, one of their helos used the callsign JACKS 370 on a Starcom 21 Zone 1 Special Events TGs - perhaps that's the "370" helo Mike heard on TG 5002?

I was comparing notes with another CARMA member Thursday (before Mike's post) re: TGs 5001 and 5002 and we came to the agreement that they could very well be used by the Illinois National Guard. Both of these TGs have seen use by "Survey" units in the past and also saw use for an exercise around the same time as the above-mentioned exercises where units were searching hangers at Midway Airport for radioactive materials (or WMDs?). I believe that the "Survey" units heard on TGs 5001 and 5002 could possibly be units from the Illinois National Guard 5th Civil Support Team (CST), Weapons of Mass Destruction, which is based in Bartonville (just south of Peoria). Per an online video about Wisconsin's 54th CST at http://173.201.204.219/DMA/videos/54thCST.wmv , survey is an element in the CST structure. Be sure to check out this video as they have a couple of rather interesting vehicles.

Just my observations and SWAGs. Does anyone have information or observations to support (or poke holes in) this theory?

Kevin

From: Mike Curtis (KC)
Topic: 4016 Message: 4023

I was really surprised how many towers I could copy from the 4th floor of a hotel in Aurora with only a Radio Shack 800 MHz antenna. Many were just on the fringe of reception but still enough signal to decode in Pro96Com and to decode the NAC.

That's the "dipper" unit. They check commercial vehicles diesel fuel tanks for illegal use of off road diesel. We/ve had them stop in our town and check.

Some less honest commercial trucks use off road diesel because there is no tax, thus the reason the IDR (IL Dept of Rev) gets involved. This is big fine for truckers found to be using the off road fuel.

Madison County will lead move to microwave

Project to bring point-to-point communication to area

By STEVE HORRELL
stevehorrell@...

Published: Saturday, August 21, 2010 9:17 AM CDT
Madison and St. Clair counties will be at the forefront of a project that promises to bring point-to-point microwave communication to the area's law enforcement agencies by as early as next spring.

The idea has been around since 2007 when the St. Louis Area Regional Response System joined up with RCC Consultants, of Woodbridge, N.J., to begin planning the project.

In Madison County, the project will cost roughly $980,000, and nearly all the costs will be covered by the federal government's Homeland Security fund.

4031. Radio Shack Pro-96 700Mhz

Yahoo group: StarCom21
Date: 2010-08-25 03:37:17 UTC
From: w9djf
Topic: 4031 Message: 4031

I was able to open up the 700Mhz band on the pro-96 using the Win96 program. I have read that you could not trunk 700Mhz on this scanner. The scanner was able to decode and trunk the control Freq 791.7500 Mhz BEE00; SY140; T0316 and 791.725 BEE00; SY140; T031E. It wasn't able to decode control freq 797.4125, 794.7875, 793.3875, and 793.1375 that I was able to receve. I thank the scanner was only able to decode one type of Motorola system on the 700 Mhz band.

Unless I'm mistaken, I believe that it might be images that you're hearing in the 790 Mhz range. AFAIK, Starcom 21 700 MHz repeater output freqs are currently between 774-776 MHz (with mobile inputs being 30 MHz higher).

As a bit of background, 700 MHz public safety repeater output freqs used to be in the ranges between 764-767 and 773-776 MHz, but in August 2007 the FCC changed the repeater output range to 769-775 MHz. While Illinois' blanket 700 MHz license (WPTZ798) was modified to reflect this change, SC21 still uses some repeater output freqs in the 775-776 MHz range. Does anyone know if or when SC21 700 MHz repeater freqs will be adjusted to fall in line with the FCC's 2007 rule change?

Thanks....

4035. receiving Romeoville,

Yahoo group: StarCom21
Date: 2010-08-27 05:34:58 UTC
From: jd
Topic: 4035 Message: 4035

Does anyone have issues receiving Romeoville (new on starcom)?
Using control channel 774.3062 I can receive Romeoville (1951 talk id), some of the times (very low signal strenth) or not all at time. Using other control channels not at all. Does anyone receive the Romeoville FD/EMS page yet on starcom? old 159.0450 107.2 is not working.

Using bcd396t, bcd996t w/gps for starcom, etc. and br330t for trunking & conventional. several outside, inside, mobile & handheld antennas. Reception area is from the boughton/schmidt area of Bolingbrook.
Thank you for any help or sugestions you may have

CARMA Meeting, Saturday, September 4

Please join us for the regular CARMA Meeting this Saturday, September 4th, 2010 at Phillies Pizza, 63rd & Kingery Hwy in Willowbrook. Doors open at 1100, meeting starts at 1300, please have meal service done by then.

Please remember to park on the west side of the building, not in front!

Buy your lunch, tip our wonderful waitress and enjoy great food, good company and mediocre conversation!

Feel free to bring handouts, For-Sale items and guests.

See ya Saturday!

FYI... Most all off the patches down in the metroeast have a RID of 0 (zero).

I assume that way 'they" know the traffic is not originating from a SC21 radio.

Topic: 4051 Message: 4052

Per the justification attachment on the applications:

769.58125 and 772.99375 will be added to simulcast site 113 on SC21.

772.74375 will replacing existing "Channel 4" which has interference. Currently it is 774.80625

Please make a submission to RadioReference and CARMA when someone notices that these changes have been made.

Thanks

Terry

Terry, i think your WRONG on the new license in your above posts, these 700 freqys do NOT belong to STARCOM, they are licenced on this weeks ILL-GRANTS to the "COUNTY OF WILL....The towers listed to get these freqys are Will County Sherrif towers not STARCOM that i can see...If this is the case you need to set the situation correct on yahoo group CARMA, and go to the STARCOM on radio reference web site and take them off the T113-Will Co-D5....Ron in Joliet???????

Will County Sheriff does not have a system, Will County EMA does - and it is ONL:Y 800mHz/EDACS. The towers are in fact SC21. Due to interference on "Channel 4", one of the three will replace it, the other 2 are to increase capacity for SC21 Site 113. Look for a permanent link between Will Co EDACS and SC21 soon as part of the new scheme. Also, look for a move of one site to a new tower for better coverage for Plainfield PD. SC21 cannot "own" channels, and these 3 new ones are from the WIll County pool per Region 54.

They are P25, I know that.

The license itself states that it is for SC21 (see the attachment)

As I wrote on the original message:

Per the justification attachment on the applications:

769.58125 and 772.99375 will be added to simulcast site 113 on SC21.

772.74375 will replacing existing "Channel 4" which has interference. Currently it is 774.80625

Please make a submission to RadioReference and CARMA when someone notices that these changes have been made.

I (personally) did not add them to T113 on the RRDB.

MANY frequencies on MANY sites are in use on sc21 sites and not owned by the state of Illinois, see Monroe County, Madison County, Sangamon County and many other I'm sure (also Ameren)

So I will ask, doesn't Motorola actualy provide the service of the SC21 system, thus the reason that there is companys such as Ameren, etc on the system. Just asking, if someone can carify this. I thought they actually leased the system IN PART to the State of Illinois and I guess other Agency's, which could patch Edacs or whatever into the system, if Motorola says OK.

If I’m not mistaken, Motorola owns the hardware and maintains it while the frequencies are from a variety of sources – the state, the tollway, and various local agencies. For example, on Tower 105 in Ashton, the Lee County SO licenses the frequencies. On Tower 134 here in Ottawa, the frequencies are a combination of State of Illinois and Ameren licensed frequencies.

I believe Ameren was brought on board in a swap for the frequencies Ameren owns that they used on their own trunked system. On a side note, because Ameren is not a “public safety” agency, they are not allowed to use any of the 700 MHz frequencies on the StarCom system. Because of this, some towers that were 700 MHz only previously, but are in an area Ameren uses, now have 800 MHz frequencies as well.

Here is a FAQ on the Starcom 21 system

http://bccs.illinois.gov/docs/ <http://bccs.illinois.gov/docs/STARCOM21_FAQs.pdf>
STARCOM21_FAQs.pdf

STARCOM21 stands for STAte Radio (Voice) COMmunications for the 21st Century. It is a 700/800 MHz, APCO

Project 25 interoperable, digital, trunked statewide voice radio communications network. The network is owned

and operated by Motorola Inc and leased back to the State of Illinois for its use. It was built to public safety

standards and is available to governmental as well as non-governmental bodies subject to state approval and

contractual requirements being met.

Thanks that makes it clear, that if one has a lic. and motorola will lease the site, and equip. then they can use the system. I monitor Ameren for the purpose of know when and where the crews are during an event, this is for our EMA agency. The area I live in does not use the SC21 system all that much, nor intends to, unless money begins to flow, LOL

They are P25, I know that.

The license itself states that it is for SC21 (see the attachment)

As I wrote on the original message:
Per the justification attachment on the applications:
>
>769.58125 and 772.99375 will be added to simulcast site 113 on SC21.
>
>772.74375 will replacing existing "Channel 4" which has interference. Currently
>it is 774.80625
>
>Please make a submission to RadioReference and CARMA when someone notices that
>these changes have been made.

I (personally) did not add them to T113 on the RRDB.

MANY frequencies on MANY sites are in use on sc21 sites and not owned by the state of Illinois, see Monroe County, Madison County, Sangamon County and many other I'm sure (also Ameren)

Thanks that makes it clear, that if one has a lic. and motorola will lease the site, and equip. then they can use the system. I monitor Ameren for the purpose of know when and where the crews are during an event, this is for our EMA agency. The area I live in does not use the SC21 system all that much, nor intends to, unless money begins to flow, LOL

If I'm not mistaken, Motorola owns the hardware and maintains it while the frequencies are from a variety of sources – the state, the tollway, and various local agencies. For example, on Tower 105 in Ashton, the Lee County SO licenses the frequencies. On Tower 134 here in Ottawa, the frequencies are a combination of State of Illinois and Ameren licensed frequencies.

I believe Ameren was brought on board in a swap for the frequencies Ameren owns that they used on their own trunked system. On a side note, because Ameren is not a “public safety” agency, they are not allowed to use any of the 700 MHz frequencies on the StarCom system. Because of this, some towers that were 700 MHz only previously, but are in an area Ameren uses, now have 800 MHz frequencies as well.

So I will ask, doesn't Motorola actualy provide the service of the SC21 system, thus the reason that there is companys such as Ameren, etc on the system. Just asking, if someone can carify this. I thought they actually leased the system IN PART to the State of Illinois and I guess other Agency's, which could patch Edacs or whatever into the system, if Motorola says OK.

4063. RE: [StarCom21] TG 1901 DeKalb PD Patch Live

Yahoo group: StarCom21
Date: 2010-10-20 03:08:10 UTC
From: Mike Curtis (KC)
Topic: 4049 Message: 4063

Had a chance to monitor T147 again today ... The patch on 1901 was active with DeKalb PD. There were a couple affiliations with 1903 and an ongoing encrypted conversation between 4 or so radios on 1904. All of the radio IDs were in the 72xxx range.

T147 added another voice frequency - 854.98750... Looking in the FCC database, the callsign for this single frequency is WQMI818 and is licensed to the ISP while the rest of the freqs on T147 are licensed to the city of DeKalb. The only CWID being broadcast (at the moment) is WQKQ642.

Subject: [StarCom21] TG 1901 DeKalb PD Patch Live

Heard talkgroup 1901 on T147 (DeKalb) today with a patch of DeKalb PD (155.2500 77.0). What was odd was the radio ID of the patch was "0". I've seen a couple radios in the 72xxx range affiliate with it so I assume that will be their IDs.

4064. NARROW-BAND DVD/CD SET AVAILABLE FROM ILLINOIS APCO

Yahoo group: StarCom21
Date: 2010-10-23 17:32:33 UTC
From: dcserkits
Topic: 4064 Message: 4064

While this may look like an ad, the Illinois Chapter has produced a Narrowbanding "kit" at cost. We are not making any money with it.

To order, go to:
http://ilapco.org/narrowband/narrowband.htm

These DVDs were professionally produced, copied, and imprinted. The cost of the kit covers 2 DVDs, 1 CD that has many documents and links, a PowerPoint that tracks with the video presentation, a nice case that holds all 3 disks, and includes postage.

Please consider a "one stop shopping" approach to Narrowbanding with this kit. Included in the presentation are many tips and guidelines to save your agency money when going through the process, and fully describes the state-wide roll-out of Narrowbanding for all the common and mutual aid channels.

Cost $11.50 - again, the Chapter is not making any money on this project. All rights reserved.

If you buy one, please send me feedback on what you thought. This has taken a few years to put together, has been peer-reviewed, and was updated many times based on feedback.

4068. Re: NARROW-BAND DVD/CD SET AVAILABLE FROM ILLINOIS APCO

Yahoo group: StarCom21
Date: 2010-10-27 13:00:19 UTC
From: dcserkits
Topic: 4064 Message: 4068

Well, it's NOT a Heathkit with a soldering iron, resistors and components. And it is NOT a cable and software to retune your radio.

The "kit" consists of a nice case, 2 DVDs with a video presentation, and a CD. The CD contains the PowerPoint to follow the lecture as well as MANY support documents and links.

Part of the presentation shows how you can make many administrative changes on your own on the FCC website (free), as well as an overview of how to apply for system changes/license changes on SpectrumWatch (free, leading up to coordination which may include other fees). These two items are where a vendor could bill you time to do something you can surely do on your own.

There is also a one-page document that can easily become the outline for a Statement of Work or the basis of a contract with a radio vendor to help agencies achieve compliance for Narrrowband.

There is also extensive discussion on the Illinois state-wide deployment of NB for all of the common and Mutual Aid channels included in the SCIP.

I hope this helps.

I need a replacement volume/squelch/PC-IF/Earphone daughterboard for my PRO2096. It appears that RadioShack no longer sells parts directly since I can't find it on their website and the dudes at the stores have no clue what I was talking about (But 3 did ask if I was interested in a phone...). I tried GRE but they are not allowed to support RS scanners in the USA.

Anyone know where I can get one?

The board I need has the volume and squelch control along with the PC-IF and earphone jacks and connects into the display daughter board and main board with several connectors.

I tried to see if one from my PSR400 would work but that one had a 3-wire pin on the connector to the display board, the 2096 has 2. I wonder if the board from an older RS desktop scanner would work, I have a PRO163 at work...

From: SC21
Topic: 4077 Message: 4077

Email not displaying correctly? View it in your browser. (http://www.radioreference.com/newsletter/20101102.htm)

Uniden HomePatrol Now Available (http://www.scannermaster.com/Uniden_HomePatrol_Police_Scanner_p/10-501530.htm?Click=20907) Uniden, in partnership with RadioReference.com, has released their long awaited HomePatrol scanner. Developed around the RadioReference.com database, HomePatrol is so easy to operate that anyone can use it. You don't have to know anything about scanners or radio communications systems. All you need to do is enter your ZIP code (or a city name) and the device will automatically load the frequencies, trunking systems, alpha tags and other technical details for that area. HomePatrol includes the entire RadioReference.com U.S. and Canadian databases of radio systems. Coupled with a optional GPS receiver, HomePatrol will automatically re-tune itself based on its current location. Database updates are available at least weekly to ensure proper operation.

New users to the hobby will appreciate how easy this radio is to use. Dedicated hobbyists will love the GPS tracking, innovative touch screen, and fantastic receiver.

HomePatrol is in-stock and available (http://www.scannermaster.com/Uniden_HomePatrol_Police_Scanner_p/10-501530.htm?Click=20907) now at:

(http://www.scannermaster.com/Uniden_HomePatrol_Police_Scanner_p/10-501530.htm?Click=20907)

Live Audio Updates (http://www.radioreference.com/apps/audio) As of November 1st, 2010, our live audio platform features 2,170 unique feeds (http://www.radioreference.com/apps/audio) from all over the world. In addition, we've been adding over 5 new feeds daily so if your local area is not yet covered, check back often.

* TIP: we receive a lot of questions about feeds that are offline or not available during certain timeframes. RadioReference reminds all listeners that all feeds are provided by volunteer broadcasters, thus we have little control over the availability of a broadcast. Remember, broadcasters might be experiencing technical difficulties or may not immediately be available to troubleshoot their feed.

Don't forget that all feed providers receive a free premium subscription (http://www.radioreference.com/apps/subscription/) to RadioReference. If you are interested in providing a feed for your area, see our article titled: Becoming a feed provider (http://wiki.radioreference.com/index.php/Become_a_Feed_Provider).
Forums Updates
The forums moderation team wanted to pass along some interesting statistics. Currently, RadioReference has over 360,000 registered members. In addition, for the month of September 2010 the forums saw the following activity:

- 2446 new threads

- 17362 new posts

Some other interesting forums statistics include:

- Most replied to thread: Word Association
(http://forums.radioreference.com/everything-else/57686-word-association.html)

- Most viewed thread: Funny things heard on a scanner
(http://forums.radioreference.com/everything-else/36654-funny-things-heard-scanner.html)

- Most popular forum: The Radioreference Tavern
(http://forums.radioreference.com/radioreference-tavern/)

- Top Poster: ka3jjz (http://forums.radioreference.com/members/ka3jjz.html)

If you are new to the forums, click here (http://forums.radioreference.com) to participate. Don't forget, all new members have their first 3 posts moderated to prevent spam from entering the forums. Our moderation team typically approves 30 new member posts within a 24 hour period.
Database Updates
The database administration team reminds users of the Uniden HomePatrol (http://www.scannermaster.com/Uniden_HomePatrol_Police_Scanner_p/10-501530.htm?Click=20907) and the Radio Shack Pro-107 (http://www.scannermaster.com/RadioShack_PRO_107_Police_Scanner_p/22-501501.htm?Click=20907) to report any issues with the accuracy or completeness of RadioReference data in the associated State/Province RadioReference Forums (http://forums.radioreference.com). This will help the community and our administration team quickly address any issues reported.

Social Networking
You can keep up to date with RadioReference by following our social networking sites.

(http://www.facebook.com/radioreference) (http://www.twitter.com/radioreference)

Subscriptions
Don't forget that RadioReference provides fantastic services to premium subscribers. Advanced reporting and downloads, access to the RadioReference Web service (http://www.radioreference.com/apps/content/?cid=3) for easy scanner programming, live audio feed archives, and personalization functions are some of the features available. See the premium subscription page (http://www.radioreference.com/apps/subscription/) for more information. If you are not already a premium subscriber, consider updating your account to premium status.

4088. 1-008 LAKE Simulcast site

Yahoo group: StarCom21
Date: 2010-11-18 03:43:47 UTC
From: SC21
Topic: 4088 Message: 4088

can anyone confirm if 854.0375 has been added to the Lake County site?

Reviewing older FCC applications, WQMJ951 added 854.0375 to the Gurnee site

I have not had time to review if all other simulcast sites had the frequencies added too

4089. Fwd: (CARMA) City of Elgin and Starcom

Yahoo group: StarCom21
Date: 2010-11-18 15:08:30 UTC
From: SC21
Topic: 4089 Message: 4089

Elgin has received an $88,000 grant to purchase the APX series of radios to access the Starcom network. It appears there may be a migration off their current system to Starcom. I am unable to determine if they are planning to have encryption enabled for all services or just for the Narcotics and Gang units.

I have had Site 108 set up with Pro96Com and there has never been a channel grant or other reference to it in the last year or so.

It might pop up eventually but not yet!

Did You Know?

By Jonathan Higgins - The Scanner Expert

It's that time of the year again finding the right gift for that special loved one. How about a scanner? Here are 5 things you should keep in mind when buying a scanner.

1. What type of scanner is needed for the area in which the person lives? Please visit our sister website PoliceScanners.net (http://www.policescanners.net/mmccatalog/274-1557991) to find the right scanner or give us a call at 1-800-SCANNER. You can also buy a HomePatrol (for digital and analog radio systems) or a GRE PSR-700 (for non-digital areas only). Both scanners are pre-programmed for the nation although we still recommend our Set-up and

Optimize service. See these radios on our web site for details.

2. Deciding Base/mobile vs Hand held - Base/Mobile Scanners are normally kept in one location, either in the car or home. Desktop scanners are for home or office use only. Hand Held Scanners are great for someone that wants to use the scanner everywhere they go (out and about or from room to room in the home, etc.).

3. Scanner programming options - We strongly recommend our software or our HomeTown Programming option when you buy a scanner. (For the HomePatrol and PSR-700 it's called "Set-Up and Optimize"). With these services the scanner will be ready to use right out of the box! Programming typically takes 5 to 10 business days and possibly more as it gets closer to the holdays.

4. Accessories - Make sure they have everything they might need or want when they receive their new scanner! A carry case, computer cable, software, mobile antenna and so on. With each scanner on our website you can make your own pac kage and when you buy accessories with the scanner there are added discounts.

5. If you're close to Holliston, Massachusetts, please stop in to our offices to make your purchase!

Secure, Safe Ordering

4093. ISTHA Changes?

Yahoo group: StarCom21
Date: 2010-11-22 23:44:31 UTC
From: Mike Curtis (KC)
Topic: 4093 Message: 4093

Over the past few weeks I've seen a lot of patching between 2002 (ISTHA Maintenance) and 2007 (ISTHA Roadwide 2)... I only occasionally get ISTHA traffic here on T134, but today I'm seeing an ISTHA unit affiliating directly with 2007 and Maintenance doing dispatching using the same radio ID from the Maintenance channel. Are they changing talkgroups or maybe splitting them into north and south?

There is supposed to be a monthly test, I think it is 1st Tuesday, when the storm sirens are tested that the main hospitals in each region are supposed to run radio checks/drills with the smaller hospitals. I don't think it has happened many times. The main hospital is also supposed to run some sort of drill during these tests which might require the staff at the other locations to gather information such as available beds, etc to facilitate use during disaster and use of Starcom.

4101. RE: (CARMA) Re: Starcom 21 for DuComm

Yahoo group: StarCom21
Date: 2010-12-28 22:41:25 UTC
From: RobertKlamp
Topic: 4101 Message: 4101

I have been following this conversation very closely as i live in dupage county. I have seen allot of different dates come up on here for the change over date. I assume the sheriffs dept would be first to go over to starcom21 followed by ducomm and local police departments and fire departments. Does anybody know anything definitive? Will they be going to starcom21 or a different system like metcad that is interoperable with sc21 but has a different system ids and sites? If they are going to starcom what sites will they be utilizing and will the current 800 MHz frequencies being used by dupage county and police departments be added to those sites? And lastly does any body have any idea when this will start to happen, I know they are testing on talkgroup 19 with tri-state pd but i would like to know when the actual switch over is happening. I have seen postings that say ducomm will be off uhf by may and another saying the system will be switching over by the end 2012, when is this going to start and what will be the order in which the departments transfer? If any body has any info please get back to me directly at robertklamp@... or through the group.

Thanks for any answers,
Bob Klamp

DuComm will be turning back their T-Band freqs except for Channel 5. I believe we are getting permission to run interops on Channel 5 for direct communication with DuComm, once the StarCom switch happens. Look for Lisle and possibly WoodRidge PD to be off UHF by May....

Bill, I will be able to tell you when I get home, as I have the data logger on. Also might be that if you are still using the Uniden 996T, I have just make a new data file that has all the updates for our area and was surprised to be able to log more towers and radio traffic in our area. The Manito site seems to be relaying many of the ISP car traffic.
Towers down maybe a maint item for today, but the 24 hour log will show this.

That guy is DANGEROUS and stupid.
1) OSHA Does NOT allow free climbing on towers, ever.
2) Weather looks nasty. The time to check it is before climbing.
3) When he clips onto the pole at the top of the tower, that isn't a rated tie-off point. It's for the static dissipators.
4) There was no need to climb up on top with the beacon. You can service everything from beside it.
5) Ever hear of a "guided" tower? I haven't. They are GUYED...

There are rumors that OSHA is looking for the climber. It would be interesting to see how many violations they nail him with.

That said, It's really cool climbing towers. I've climbed up 500 feet and taken an elevator to a platform on the 700 foot level of another. The view is amazing.

Ron - did you notice anything unusual in your logs?

I also am noticing some strange behavior around Peoria. For example, I have not heard one peep on the D8 ISP talkgroup in over an hour, and this is New Year's morning! Also seems to be a general degradation in reception at my location as of late.

I visit relatives in Rockford often, and the RFD simulcast seems to work much better than the PIA one.

ISP D9 and D8 are transmitting as I type, seems that there is a slight bit more traffic on the Manito tower, so it could be that one of the towers to my N or E is having problems.

Not sure, but as of Lately seems like the Flora,IL tower in D12 is
re-transmitting more ISPERN traffic, starting to hear some Pontiac, and D11
Traffic, not quite normal for this site.

Aren't the ispern transmissions just simulcasts anyways? When I dispatched for macomb I would hear isp d11, 8, 7, 9, and iowa all night long.

Not sure, but as of Lately seems like the Flora,IL tower in D12 is
re-transmitting more ISPERN traffic, starting to hear some Pontiac, and D11
Traffic, not quite normal for this site.

From: Michael Dickerson
Topic: 4102 Message: 4115

ON standard VHF it doesn't patch from starcom to 155.475 in D12, sometimes they don't even put it out on VHF ISPERN anymore, they put it out only on Starcom. At times in D12 it seems the patch or receiver to pick up neighboring ISPERN's hasn't been on.

4116. PRO-197

Yahoo group: StarCom21
Date: 2011-01-03 20:43:44 UTC
From: multiuseguy
Topic: 4116 Message: 4116

Starting to look at digital trunking scanners. Due to price I'm thinking along the lines of the PRO-197. Mainly interested in McHenry Co Sheriff and some analog transmissions still used by local fire and police. Any thoughts?
Tks.....

Basics are that it may work for you to do this, but check to be sure that some time at a later date McHenry Cnty is not changing systems.

It will work, although I have not had experience with it. I would suggest that you look at some of the reports and comparisons such as this one here:

http://www.scannermaster.com/RadioShack_PRO_197_Police_Scanner_p/22-501341.htm

McHenry County will not be changing any systems as all of the county services are up on their Starcom overlay system.

I think you can get a Uniden BCD-396T from Fry's Electronics for the
same price as a refurbished PRO-197. Might take a look at that. It
works fine for the McHenry county area.

4121. CARMA Meeting Saturday

Yahoo group: StarCom21
Date: 2011-01-06 05:22:09 UTC
From: Rich Carlson
Topic: 2962 Message: 4121

Please join us for the next regular meeting of CARMA, the Chicago Area Radio Monitoring Association this Saturday, January 8th at Phillies Pizza in Willowbrook.

We start to arrive at 11:00 AM when the doors open and the meeting itself starts at 1:00 PM.

Please park on the west side of the building. You must buy your lunch.

If you have handouts, for-sale items or guests please bring them!

Rich Carlson, N9JIG

4122. Marion County IL Frequencies

Yahoo group: StarCom21
Date: 2011-01-07 02:10:14 UTC
From: skycom291980
Topic: 4122 Message: 4122

Group,

Does anyone have any info on if the Marion County Sheriff department is going to digital or if they have already gone there and are testing it? The reason i ask is i heard someone say that they went to starcom21/digital P25 transmissions. I myself dont think they have as i am still hearing stuff as usual on their 155.520 frequency. I looked everywhere i could and found nothing that they have switched are that they are testing it.I have checked radio reference.com and even the universal licensing website for frequencies assigned for marion county il and nothing has told me anything of them using the digital starcom21. I seen where they have either applied or are awaiting funding but that was from a long time ago and that info i got off of some other site. Like i said i still hear things as usual on their normal frequency as i stated above. Any info on if, when, or if they have already switched would be of great help. If you have any info on the trunking id's they are using it would also be of great help so i can program my scanner.

Thanks

Dean Meredith

Certainly nothing I can find to indicate they are on Starcom

Just setup a wild card for ISP in that district.and see if you hear them?

I haven't heard them either from Clay County. I doubt they would go to Starcom21, the system is active they use. Someone may have been confused, but Starcom is used in Marion County, by ISP, and state agencies except IDOT. Someone might have also confused the 800 mhz frequencies in use there, which are DATA for MDC's. There are also 800mhz channels for dispatch patches, I believe. Effingham County is reported to be going to Starcom.

KC9PHK,

Thanks for the info. Yeah they are not on starcom or the Digital P25 system but it would be nice if they would and some of the surrounding cities. I was aware of the dispatch patch frequencies but those are only for the 911 fire dispatch for the county and no law enforcement is on them as of yet. That system is actually called LTR Standard Analog voice so even that isnt digital. Again it would be great to have the area switch over to digital cause i am tired of hearing static or only hearing the dispatch and not the mobile units. Wish it was all like the state police are using.

Thanks again

4126. WCRA Hamfest - Time is Running Out!

Yahoo group: StarCom21
Date: 2011-01-11 02:01:05 UTC
From: Richard Bauer
Topic: 4102 Message: 4126

Wheaton Community Radio Amateurs Mid-Winter Hamfest

Sunday, January 23, 2011
8am-1pm
Kane County Fairgrounds
Randall Road between Illinois Rt 38 (Roosevelt Raod) and Illinois Rt 64 (North Avenue)
Plenty of FREE PARKING!
Talk-in on 145.31/R with a 107.2 tone or 146.52 simplex (no tone)

Hourly Prizes! VE Testing for all classes!

Special Guest is Joel Hallas, W1ZR, Technical Editor of QST and writer of the 'Doctor Is In' column in QST. Mr. Hallas will present a program on comparisons between multi-band wire antennas starting at 9:30am. At 10:45 Mr. Hallas will host a live version of his "Doctor Is In' column by taking technical questions from the audience. You can submit your question in advance at mailto:askthedoc@....

Advance Tickets are $7 and have 4 prize stubs attached. Tickets at the door are $9 with one prize stub.

Order your advance tickets by sending your check/money order plus a self addressed/stamped envelope to:

WCRA Hamfest Tickets
PO Box QSL
Wheaton IL 60187-1055

The deadline for by-mail ticket requests is Saturday, January 15th. This will allow enough time to process your request and mail your tickets.

Check http://wheatonhamfest.org/ for more information. Questions? call 630-604-0157 or drop me a post at mailto:n9dko@...

73,
rich, n9dko

4127. New GRE PSR-800

*
*

Select your local system you want to monitor.

Special request? No problem - you can add favorite frequencies with the
included EZ Scan Digital software utility program.

The PSR-800 combines simple controls like those used in an MP3 player
with the power and sophistication of a state-of-the-art scanning receiver!

Designed to provide unprecedented ease of use, for beginners and experts!

Complete USA and Canada Database On a MicroSD Card

Recoding Function permits recording of Transmission

Exclusive Multi-Color Alert LED

Full Dot-Matrix/High contrast "WHITE" Color backlight LCD

Keypad, optimized for one-hand operation

Multi-System Digital/Analog APCO P25 Trunking - Scans digital and analog
trunked radio system signaling formats, including Project 25, Motorola
Type I/II/Hybrid, EDACS and LTR systems.

Upgradeable CPU and DSP firmware and library - Keep EZ Scan Digital
current with enhancements and updates as they become available with free
upgrades through EZ Scan Digital software utility program.

CTCSS and DCS subaudible decoder

Weather radio receiver mode with SAME and All Hazards signal decoding

User upgradeable CPU firmware

Spectrum Sweeper rapidly finds nearby signals even if you do not know the frequency.

SPECIFICATIONS
Frequency Coverage

25-54, 108-136.99166, 137-174, 216.0025-512, 764-781.996875, 791-796-996875, 806-960 (excluding cellular bands), 1240-1300 MHz

Receive mode

AM, FM, NFM, P25, MOT, EDACS, LtR, CTCSS, DCS

Frequency step

3.125, 5, 6.25, 7.5, 8.33, 10, 12.5, 25 kHz

Selectivity

AM 25-27.995 MHz:

4 kHz / 6 kHz (-6 dB / -50 dB)
Other frequency and modulation:
7 kHz / 13 kHz (-6 dB / -50 dB)
Scanning Rate

Up to 70 channels/second

Search Rate

Up to 80 steps/second

Receiving system

Trip conversion PLL synthesize super-heterodyne

Antenna Impedance

50 ohms

Audio Output

500 mW (Max. Power)

Power requirement

4AA Batteries or USB 5V DC

Current drain

170 mA nominal (Squelched) at 5V DC

Operating temperature

14 to 140 deg. F (-10 to 60 deg. C)

Dimension (HWD)

5 5/16 x 2 1/8 x 1 1/16 inches (135 x 67 x 28 mm)

Weight

Approx. 7.4 oz (210 g)

Included Accessories

USB Data Cable, Antenna, 2GB MicroSD Memory card, Rotating belt clip, CD-Rom Media

FEATURES
*
Easy to understand Media Player User Interface - *The simplified keypad and display with familiar Play, Pause and Navigation controls make EZ Scan Digital intuitive to use.
*
Complete USA Database on a MicroSD Card -* The entire USA database is stored on a MicroSD Card included with the EZ Scan Digital, giving the user the most comprehensive radio data available...all without connecting EZ Scan Digital to a computer or Internet a GRE First!.
*
Upgradeable CPU Firmware and Library -* Keep EZ Scan Digital current with the enhancements and updates as they become available through provided PC Software Application
*
Powerful PC Software Application -* Modify or add your own Scanlist with the easy to us EZ Scan Digital software application.
*
SKYWARN Store Spotter Functionality -* Instant access to frequencies used by storm spotter networks. Monitor storm conditions as they occur, and learn about dangerous conditions before the media or emergency management officials announce them to the general public.
*
SAME and All Hazards Weather Alerting -*EZ Scan Digital features a Dedicated SAME Weather Alert Receiver mode, alerting users to severe weather and other hazards in the specific area(s) that they select. EZ Scan Digital can check local NOAA weather frequencies periodically, even while scanning, and provide an alert when an All Hazards alert occurs.
*
Multi-System Digital and Analog Trunking -* Scans digital and analog trunked radio system signaling formats, including Project-25, Motorola Type I/II/Hybrid, EDACS, and LTR systems.
*
Powerful Spectrum Sweeper - *Quickly sweeps EZ Scan Digital's frequency ranges for transmissions from nearby sources. When a nearby transmission is found, EZ Scan Digital automatically tunes to that frequency and receives the transmission.
*

Built-in Service Searches -* Predefined service search ranges makes it easy to fine activity in your area.
*
Audible alarms -* Programmable alarms can be configured to sound when certain frequencies are active.
*
Signal Strength Meter -* Shows relative strength of received signals
*
Slim, compact case design with larger speaker -* Designed for one-handed operation and portability.

/* Specifications Subject to change without notice./

4128. Best or better scanner???

Yahoo group: StarCom21
Date: 2011-01-12 20:21:07 UTC
From: Mark Bradley
Topic: 4128 Message: 4128

Question for the group,which scanner seems to be a better or reliable scanner that now there are at least three good units out.We know of the Pro-106-good to great scanner,,,,newer the Home Patrol scanner,does all but the dishes after supper,and now the PSR-800,very new and not sure if too many scanner buffs have played with this scanner? I own a Pro-106 and was wanting to upgrade and or purchase one of the newer scanners,and not sure if I need to fork out have a mortgage payment? If and anyone has tried the PSR-800,being a portable may be a interesting choice??Does it have signal stalker like the 106,need to read the promo for the unit. All inquiries will be appreciated I am sure for all the members. Thanks for any help and enjoy the scanning hobbie,LOVE IT,Mark......

There is "no" best scanner. It's like Chevy, Ford,Dodge, They all get you there. It's just what you like & feel comfortable with. I have both Uniden & GRE. Great scanners both of them. The new Scanners that are coming out are for less experienced scanner persons or entry level. 6 months and you will want more if you get seriously into scanning. And just for info, Rat Shack is GRE based.

4134. Question About IEMA Radio IDs

Yahoo group: StarCom21
Date: 2011-01-27 20:00:41 UTC
From: Mike Curtis (KC)
Topic: 4134 Message: 4134

Every now and then on the IEMA 1 talkgroup on StarCom (4001) I hear various nuclear plants calling a unit at Mazon that sounds like "net rock" ... The plants ID themselves as "i-task" or "i-cast" or something like that. I'm curious what the names/acronyms actually are :)

Thanks!

The Academy traffic issue has been spoken about before, but I'll repeat it again.

It very well could be that a Trooper, temporarily assigned to the Academy as a class counselor, is home for his days off and is listening to the Academy on his StarCom radio. affiliated with a tower near you. when I worked for the ISP, I could listen to ANY StarCom talkgroup on my radio - and when I did, anyone scanning that tower would also hear that traffic. For example, I could select Dist 22-A, and be able to monitor traffic from ISP Ullin. If you were listening to the same tower I was affiliated with, you'd hear it as well.

There's nothing magic here, Bryan - you need to understand how the system works. I'm sure I drove people up north here absolutely nuts when I'd select Dist 13-A from time to time..

No Mark

Then he would be listing to that talk groups traffic, not ours. There are Dist 15 cars on this id, I'm monitoring on pro-96 and three scanners

"The Academy traffic issue has been spoken about before, but I'll repeat it again."
Does not need to be repeated as I understand this system. A dist 8 car is in the area but he get Dist 8 traffic, not ours, You need to Listen to the traffic & watch the id's on & watch pro-96 as I am

There is also a dist 8 car in the area but that car is getting Dist 8 traffic.
I hope this explains it more clearly

This may have been a training operation. Sometimes I don't give enough
info on what I'm trying to get a cross.
My frustration here,
"This is what I was replying to - was there something I misunderstood??"
No, I was not explaining clearly enough even in my brain.
Please show me a little brain farting room here Mark. (I think
backwards there for it is upside down)
Your bandwidth is not waste.
There was only one radio that I did not identify as a d-15 unit. The
rest where d-15 cars.
On pro-96 I have most of the car identified by area IE: d-15, dist-2,
dist Chicago, water reclamation, you get the idea.
 I have also a car (Radio id) that that jumps around a lot from talk
group to talk group, It also associates with all the area
talk groups. I'm still trying to figure out who that one is. The maint
guys are the hardest as they & some of the d-15 radio's switch back
and forth so much from garage to ista to d-15 to itsa maint so much.
Colour coding them has helped but I'm still playing with them

Governor activates Illinois National Guard
Comments 1
(http://www.thetelegraph.com/news/illinois-50074-state-interstate.html#slComments)

February 01, 2011 12:50 PM

For The Telegraph

SPRINGFIELD - Gov. Pat Quinn activated more than 500 Illinois National Guard troops Tuesday to assist stranded motorists on several interstate highways as part of the state's ongoing efforts to prepare for a large winter storm.

The troops will be stationed at rest areas along interstate highways, including Interstate 70 and those north of I-70, and will coordinate with Illinois State Police to ensure the safety of travelers stranded along the roads.

"We must do everything we can to keep motorists safe during this massive winter storm. Illinois Department of Transportation crews are working non-stop to clear roadways, and the Illinois State Police will also be closely monitoring our highways," Quinn said. "These troops from the Illinois National Guard will help ensure public safety along the roadways, and I urge everyone to exercise caution when traveling."

Illinois National Guard troops deployed for this mission are from the following units:

- The 2/106th Cavalry Squadron based in Kewanee, with subordinate units from Galva, Dixon and Pontiac, which are being deployed to the northern part of the state.

- The 766th Engineer Company based in Decatur, the 1844th Transportation Company based in Quincy and the 3637th Maintenance Company based in Springfield, which are being deployed to the central part of the state.

- The 634th Brigade Support Battalion based in Sullivan and the 233rd Military Police Company based in Springfield, which are being deployed to the southern part of the state.

An Illinois National Guard headquarters element also is being drawn from the 65th Troop Command Brigade and 183rd Fighter Wing, both from Springfield.

Troops stationed along the highways will carry supplies such as water, snack bars and roadside safety tips to provide to stranded motorists. Guard members also will relay information regarding road conditions, vehicle accidents and stranded motorists to ISP officers working in the area.

"I'm proud that the Illinois National Guard is able to play our part in responding to this winter storm," said Maj. Gen. William L. Enyart, the adjutant general of the Illinois National Guard. "Our soldiers and airmen respond to the governor's call to help in state

emergencies, just as we answer the president's call to serve overseas. It takes selfless citizens to serve in today's National Guard, whether in Illinois or across the world."

Quinn activated the State Emergency Operations Center in Springfield on Monday afternoon to coordinate the state's response to the storm. The center will operate around the clock until the storm threat subsides.

Illinois travelers can check on highway conditions by calling (800) 452-IDOT (4368) or visiting the IDOT's road conditions website at www.gettingaroundillinois.com (http://www.gettingaroundillinois.com) and clicking on "Winter Road Conditions."

For more information about winter storm safety, visit the Ready Illinois website at www.Ready.Illinois.gov (http://www.Ready.Illinois.gov).

Hearing an IL National Guard convoy headed for Pontiac on SC21 TG 30332 (ITTF Incident 1). Conversation is rather informal, wonder if they realize that their comms are being heard statewide? Might be good chance to snag some radio IDs for those equipped with that ability.

Mark

They have also been using 30333 the last couple days, including 4001.

Yes, very informal at times, not knowing they were on the system they were. At one point there was cursing, etc. Later, about 2 hours, an announcement was made to keep their informal conversations to their own radio's, not the ones on SC21.

RIDS today: 1114401, 660377, 2800007 in addition to ones I published yesterday on the Starcom21 yahoogroup.

4151. Silent treatment!

Yahoo group: StarCom21
Date: 2011-02-05 22:50:22 UTC
From: R
Topic: 4151 Message: 4151

I've just received a PRO-106 as a gift and am in hot pursuit if interesting things to listen to...

I'm listening to several Indiana trunked systems (LTR, MOTO, EDACS, etc...) here in western Indiana. (Just 3 miles from the Illinois border.

I have no joy with the Starcom21 system.

I have a discone antenna connected to the radio and receive a number of signals in a 25 to 30 mile radius.

I am using PSREdit-500 V 1.0 4 build 224.

I have the TSYS object configured as a P25 Auto, NFM checked, Multi Site Mode set to STAT with the all control channels option checked. I've checked and re-checked the control frequencies. Again, no joy! The silence is defening!

Any help will be greatly appreciated..

Ronel (WR9T)

Hi Ronel

Go to the CARMA web site Yahoo And download one of the Starcom files
from there and load it into your scanner.

http://www.carmachicago.com/

This is a good starting point to get you going.
When you have that running go yo the pro-96.com site then doenload that program.

http://www.psredit.com/pro96com/index.html

This should put you into overload of information for
a couple of weeks. Enjoy!

4155. ISP Academy Traffic (and a Theory)

Yahoo group: StarCom21
Date: 2011-02-14 22:49:36 UTC
From: Mike Curtis (KC)
Topic: 4155 Message: 4155

Today while passing through LaSalle, I heard traffic on Academy A (13082) on T131 (LaSalle). Some D Chicago label units (Charles xxx) and some 62xx units talking to a dispatcher. The dispatcher was a District 17 dispatcher as I recognized the voice (using a radio service radio ID, not a console).

Since StarCom is a statewide system, I'm thinking that the various dispatch centers are putting in time acting as dispatchers for the academy units. That's why hits on the Academy talkgroups are being heard on various towers around the state.

You would not believe just how many have not a clue how to operate th base or portable radios.
So this does not surprise me.
Most that have just a couple radios, think they can only use them for a full blown disaster, when they can use them for every day events.

From: John Zelz
Topic: 4160 Message: 4167

That assumes that you have a roll call list of everyone who has the ability to check in. Maybe in the future, but this was the best way to handle it this time.

Subject: (CARMA) Statewide Tornado Drill on StarCom ITTF Incident 3

With a roll call and check-ins from around the state...

An interesting note though, when doing a statewide check-in, call stations by name - don't ask everyone to chime in without order ;)

Not only that, but the system only lets one person transmit at a time anyways, so there isn't a problem with doubling or other chaos that a normal net would have...

True but initially, watching on Pro96Com, there were multiple keyups simultaneously (same second) and it seemed that the "last one" won.

Is there some kind of priority assignable to radios on a P25 system?

4175. My Pro96Com Logs As a Website

Yahoo group: StarCom21
Date: 2011-03-05 19:57:53 UTC
From: Mike Curtis (KC)
Topic: 4175 Message: 4175

I've been running Pro96Com against various systems as I travel, mainly StarCom, and have compiled the CSV files into a website. I play a programmer and database guy at the office now and thought I'd do something with all of these CSV files :) It's a first pass at this and I have more in mind of what to do and I'm sure there's bugs to fix, but have at!

P25 Phase 2 Products to Hit the Market in August

With most of the Project 25 (P25) Phase 2 standards documents that
suppliers need to build products published, vendors are gearing up to
launch commercial Phase 2 products later this year. However, some Phase
2 interoperability, conformance and performance documents are awaiting
publication... READ MORE

From: Mike Curtis (KC)
Topic: 4179 Message: 4183

Those are the channels from T101 (DuPage)

http://pro96comdb.fumarin.net/Tower/140/101

Do you by chance have your Pro96Com scanner set on "scan" rather than manually held on a control channel? I've seen circumstances when the scanner providing control channel data drops the current control channel and scans, finding the next control channel, the change in tower information isn't picked up right away by Pro96Com sometimes causing "merged" tower information.

4184. RE: [StarCom21] New 700.mhz frequencies in the north

Yahoo group: StarCom21
Date: 2011-03-16 22:48:59 UTC
From: Robert Klamp
Topic: 4179 Message: 4184

I am in no way calling the op a liar or attacking him I wanted to make sure everbody knew this before i asked my question. Is anybody else seeing these results from site 115? I am currently decoding the system with pro96com from itasca and am yet to see a 700mhz frequency on this site. Can anybody confirm this activity on site 115 cook north?

Thanks,
Bob

Those are the channels from T101 (DuPage)

http://pro96comdb.fumarin.net/Tower/140/101

Do you by chance have your Pro96Com scanner set on "scan" rather than manually held on a control channel? I've seen circumstances when the scanner providing control channel data drops the current control channel and scans, finding the next control channel, the change in tower information isn't picked up right away by Pro96Com sometimes causing "merged" tower information.

Bryan et al;

I think Mike has it right, I think your radio is decoding site 101.

I have 115 on Pro96Com right now and I have only 85x MHz channels:

851.4375 cavd
851.9375 cvd (Active Control)
852.8875 vd
853.4625 vd
853.9125 vd
854.9875 cavd
856.2375 vd

I have been monitoring 115 for months continually and these are the only freqs I have seen. I have as many as 400,000 hits on some of these channels.

Locked on tune mode 851.9375, I'm in Des Plains Oakton & River rd With a Rubber duck ant in the shop.
As I look at the map it says 115 I'm closest to
Those are the facts the rest can be up for grabs, You tell me. I'm not in scan mode.
Listening to the control channel only. I'm willing to be wrong...That said,You guys have to make me right.

4190. Cook County Testing

Yahoo group: StarCom21
Date: 2011-03-23 00:49:06 UTC
From: Robert Klamp Jr.
Topic: 4190 Message: 4190

I have Unitrunker version 1.0.0.20 running off a discriminator tap on this control channel (851.2250) and it is showing and its showing the same info only I'm also getting "channel access" as TDMA when I use it to monitor Starcom the "channel access" shows as FDMA . Could this be one of those P25 phase 2 (X-TDMA) sites that have been popping up? Motorola said they wanted to roll out Phase 2 by the end of Summer/Fall 2011 I wonder if this is a Motorola test site or Cook County test site? If anybody has any further info on this please let me know.

Thank You,

Bob Klamp

4191. Cook County P25 Upgrade

Yahoo group: StarCom21
Date: 2011-03-23 22:53:51 UTC
From: Rich Carlson
Topic: 4191 Message: 4191

It appears that Cook County has started transitioning into the P25 system today. I am hearing Sites 501, 502 and 503 so far, but I am too far north to hear other sites. You south-siders may want to see what you can figure out!

501 appears to be the North zone, control is on 853.2625. The other CCSPD North channels from the old system appear to be reused.

502 seems to be the South zone, and uses 853.7750 for control. I can not get a good enough data copy on this to get info on other freqs.

503 appears to be the Northfield Intelli-repeater site, I have not yet spent enough time monitoring it to see if there have been channel grants.

So far Site 501 is showing only 502 as a neighbor, it is possible that the connection to the rest of SC21 has not yet been done.

It looks like the talkgroup assignments are in the 25xxx series. Radio ID's are showing up as 57xxxxx series.

This probably explains the use of the VHF channels reported last night.

I am sure a lot of this will be in flux as the system is cut over.

Cook county is on starcom21 using phase 1 FDMA technology as far as everything I have seen. The Phase 2 TDMA system that was brought up has nothing to do with the cook county system, Cook County TRS ID is 140 with a WACN of BEE00 which is starcom. The TDMA system has a different system ID and WACN. Interestingly though I when decoding starcom with PRO96COM I have started seeing a packet that says TDMA SYNC AVAILABLE so I dont know if starcom will soon embrace phase 2 or if it will remain phase 1. If anybody has any info on the way starcom21 is headed for the future please let me or the group know as I have begun to wonder about what changes if any are going to be affecting the starcom system in Illinois.

Thank in advance,
Bob

Subject: RE: [StarCom21] Cook County P25 Upgrade

I noted that someone reported X2-TDMA was spotted in the Pro96Com data for this new Cook Co. system. Can someone confirm this?
Also, are there any PSR-800 users that can verify X2-TDMA is present if indeed this is an available mode? A check of the P25 information populated in the edit/custom table should also display X2-TDMA with alternate frequencies.
It was suggested that this system is not a Motorola manufacture due to the WACN and system ID being identical, any news of who the system pr ovider is?

No, these sites are in Cook County, near Chicago.

You can check the RadioReference Database for McLean County. As far as I know there is no new system in McLean County, but Bloomington has joined the existing StarCom21 system.

Bloomington is using the same talk group they were using to patch their dispatch to. I don't have it handy but you should be able to find it in any of the Starcom profiles.

listening on the way home today 12:45 p.m. from work.
police copter 1 on ISPERN telling cook county that they can hear on Patrol South but were not able to communicate.
dispatch tells them they should be on the NEW BAND PLAN A.
he tells them that they do not have it programmed in there radios?
dispatch said he will let radio control know about it.

4204. FCC Finds in Sprint’s Favor in Rebandin g Ruling (3/22/11)

Yahoo group: StarCom21
Date: 2011-03-31 03:53:22 UTC
From: SC21
Topic: 4204 Message: 4204

FCC Finds in Sprint?s Favor in Rebanding Ruling (3/22/11)
The Illinois Public Safety Agency Network (IPSAN) and Sprint Nextel are currently in Wave 1, stage mediation by the 800 MHz Transition Administrator (TA) in a dispute as to whether a ?second touch? to IPSAN?s mobile data radios is needed in order to provide IPSAN with comparable facilities.

IPSAN is licensed under call signs WPKG583, WPKX703, WPKP764, WPSP557, WPXM784 and WPHY365. Its data-only Illinois statewide network has 37 sites, 23 of which must be rebanded. More than 290 Illinois public-safety agencies use approximately 4,000 mobile data radios on the network.

The parties have agreed to reconfigure IPSAN?s data-only network by retuning IPSAN?s infrastructure and adding the post-rebanding frequencies, assigned by the TA, to each of IPSAN?s mobile data radios. The mobile data radios will operate on both the pre-rebanding and post-rebanding frequencies while IPSAN?s 23 base stations are rebanded.

IPSAN, however, submits that, on completion of rebanding, the mobile data radios should be given a ?second touch? to remove the pre-rebanding frequencies. Agency officials argue that unless these frequencies are removed, the mobile data radios occasionally will encounter additional scan delay time whenever they must execute a ?static list scan,? because they will be scanning both the unused pre-rebanding frequencies and the post-rebanding frequencies.

Sprint argues that a second touch of the subscriber units isn?t needed to provide IPSAN with comparable facilities. It contends that any additional delay in static list scan time would be brief (relative to the current scan time delay) and that the mobile data radios execute a static list scan only infrequently. Sprint also submits that IPSAN?s proposed costs for a second touch are excessive.

The TA mediator said that requiring Sprint to pay for a ?second touch? of IPSAN?s mobile data radios is unnecessary and recommends that the commission direct the parties to enter into an frequency reconfiguration agreement (FRA) that reflects the reconfiguration costs for IPSAN?s 800 MHz data radio system minus the estimated $1.033 million cost for a second touch to the mobile data radios.

FCC officials said that the commission agrees with the TA mediator that Sprint has met its burden of proof to show that the mobile data radios, with the pre-rebanding frequencies retained, will provide IPSAN with facilities comparable to those that IPSAN had, pre-rebanding. IPSAN, however, has not met its burden of showing that its proposal represents

the minimum reasonable cost of rebanding its system. ?IPSAN has misread the commission?s orders respecting comparable facilities and has pointed to insubstantial differences pre- and post-rebanding in an attempt to extract an additional $1,033,430.70 payment from Sprint,? the ruling said. ?We emphasize that our holding here, relative to IPSAN?s data-only system, is specific to the parties in this proceeding, and does not preclude licensees in other cases from asserting that two (or more) touches are operationally necessary for rebanding their particular systems, or from providing for multiple touches in their rebanding agreements with Sprint.?

All licenses are submitted at "GE" which is conventional, not trunked.

The emission on all frequencies is 8K70D1W which should be P25 mode
(such as Starcom21)

CCSO hereby submits its proposal for modified use of the 800 MHz
spectrum to deploy a trunked system that will provide greater
interoperability, while concrrently remedying the issue of operation
with temporary authorization.

The existing system serves over 10,000 end users and is the backbone of public safety voice communications throughout Cook County, used to protect over 5 million residents.

Also a statement for this:

700 Mhz Spectrum to deploy a high speed data system employing oFDM technology that utilizes narrowband data transmission that will provide high reliability wide area coverage characteristics via the current mobile data technology.

These "SG" Licenses are for 700 MHz

4206. VHF Interoperability Channel Naming

Yahoo group: StarCom21
Date: 2011-04-10 02:46:57 UTC
From: starcom21@RadioReference.com
Topic: 4206 Message: 4206

VHF Interoperability Channel Naming

March 30, 2011

By John S. Powell
The first documented use of interoperability channels is in the early 1960s shortly after the two-channel, VHF FM mobile radio was first marketed. Art McDole, long-time Northern California Association of Public-Safety Communications Officials (APCO) International frequency advisor and communications director for Monterey County, Calif., saw a dramatic increase in requests for secondary VHF frequencies by law-enforcement agencies coupled with a lack of interoperability. Working through what was then the California Disaster Office (CDO), the state of California licensed the state agency-only frequency 154.92 MHz for what became known as the California Law Enforcement Mutual Aid Radio System (CLEMARS).
The VHF channel is still widely known by CLEMARS even though the name was recently updated to follow the intrastate version of the American National Standards Institute (ANSI) channel naming standard, and with expansion to other bands, a dozen CLEMARS channels are used across California. The fact that this was a simplex channel enhanced its usability because its limited range made it incident specific. Pairing with any other VHF channel for repeater use would have left it unusable whenever the other channel was located adjacent to an incumbent VHF channel because the FCC doesn't formally pair channels in that band. Currently, channels in the UHF, 700 and 800 MHz bands are all paired by FCC rule, allowing the use of tactical repeaters with relative ease. Unfortunately, this lack of pairing left the VHF band without any designated repeater channels for interoperability. With VHF continuing nationally to be the most heavily used band for public-safety communications, the need for standardized repeater pairs to provide wider coverage is a significant requirement.
In April 2010, work began independently in Minnesota and Texas to pair existing FCC Part 90 national VHF interoperability channels for use in on-scene tactical repeaters. Formal proposals were developed and discussed within Minnesota's Allied Radio Matrix for Emergency Response (ARMER) group and Federal Emergency Management Agency (FEMA) region VI's regional emergency communications coordination working group (RECCWG), with coordination through the Department of Homeland Security (DHS) Office of Emergency Communications (OEC) by its regional coordinators and Ross Merlin, author of the national interoperability field operations guide (NIFOG) at DHS/OEC headquarters. A formal proposal subsequently was submitted by the state of Texas to the National Public Safety Telecommunications Council's (NPSTC's) interoperability committee for consideration as an addition to the ANSI Naming Standard (APCO/NPSTC

ANS 1.104.1-2010: Standard Channel Nomenclature for the Public Safety Interoperability Channel).
ANS 1.104.1-2010, initially approved by ANSI June 9, 2010, contains two parts. The normative part describes the formula and supporting logic used to implement the standard, and the informative part lists the application of the formulas to existing FCC-designated Part 90 nationwide interoperability channels in the form of tables listed in channel name and frequency order. Changes to the normative part of the standard require a full re-vetting of the standard, while updates to the tables --- without changing the formula --- are considered minor and can be made without a full re-vetting of the standard. Thus, it was desirable to implement these changes by only addressing the names themselves using the existing formula.
The proposal from Texas was designed to pair the existing VHF general use tactical channels (VTAC11 to VTAC14) to provide maximum separation between receive and transmit (RX/TX) frequencies for ease of implementation. The proposal strictly addressed transportable repeaters with low transmit power (typically 20 watts output or less) designed for on-scene use in support of an incident, either emergent or planned. Three pairs were identified with RX/TX separations greater than 4.25 megahertz that could, using high-quality receivers and transmitters, be implemented without requiring a duplexer if antennas were properly located. In fact, this implementation could be accomplished using an interconnect net on an audio bridging device or gateways that are considered standard equipment in most mobile communications vehicles (MCVs) with proper adjustments and antenna placement.
In examining the Texas proposal from a nationwide perspective, it was determined that none of the proposed pairs were usable in Puerto Rico (PR) and the U.S. Virgin Islands (USVI). If these pairs were to be truly nationwide, at least one of them needed to be usable in the Caribbean. Texas officials initially expressed a need for two statewide interoperability channel pairs. Follow-on discussions were subsequently held by NPSTC with VHF stakeholders in other states, including California, Minnesota, Montana, Nebraska, Nevada, Oklahoma, Wisconsin and Wyoming, with consensus quickly reached. Although too late to include in the initial publication of the APCO/ANSI/NPSTC channel naming standard, a best practice determined by appropriate stakeholder representatives could be given national exposure in the upcoming 2011 revision of the NIFOG and then submitted to ANSI as the first revision to the naming standard.
An unofficial opinion from key personnel in the FCC's Public Safety and Homeland Security Bureau (PSHSB) indicated that the use of these channels in a repeated mode at temporary sites (temporary mobile relay, FCC station class FB2T) wasn't prohibited by current Part 90 rules and regulations. While there appears to be no FCC restriction on licensing of these interoperability channels at fixed sites (FCC station class FB or FB2), such use could be problematic, particularly with the potential for high-power base/repeater stations --- 60 watts or more, often at high elevations above average terrain --- causing interference to on-scene users of these tactical channels across a wide area. The intent

for tactical repeater use within the local/state public-safety practitioner community was solely for low-power use at 20 watts output or less for incident-based deployable systems, and then only as designated by an incident's communications unit leader (COML) or incident commander on that incident's radio communications plan ICS Form 205.
As designed, these new names would be additions to the ANS 1.104.1-2010 name tables and a minor change to the standard not requiring a lengthy public comment period. In selecting the recommended pairs, the following points were considered:
1. Which frequencies to pair, frequency separation and PR/USVI restrictions;
2. Continuous tone-coded subaudible squelch (CTCSS) use; and
3. Operating practices
. Primary and secondary pair
. Shared use and priority
After considerable deliberation by NPSTC's interoperability committee with public-safety communications practitioners across the United States, the following proposal was presented to the NPSTC governing board at its June 15, 2010, meeting:
1. Available pairings --- low-in/high-out for repeaters, and shown as subscriber radio TX/RX pairing were:
. VTAC11/VTAC14 --- 151.1375/159.4725 --- this pairing has the maximum separation possible for the VTAC channels: 8.335 megahertz
. VTAC12/VTAC13 --- 154.4525/158.7375 --- separation is 4.285 megahertz
. VTAC11/VTAC13 --- 151.1375/158.7375 --- separation is 7.6 megahertz
. VTAC12/VTAC14 --- 154.4525/159.4725 --- separation is 5.02 megahertz
. VTAC13/VTAC14 --- 158.7375/159.4725 --- separation is 0.735 megahertz --- duplexer required, but usable in PR/USVI
2. Available names for VHF tactical repeater channels:
.VTAC15, VTAC16, VTAC18 and VTAC19 were considered. However, with hope for the future addition of national VHF channels (including designating 155.1600 MHz for national SAR), these were kept in reserve.
. VTAC33 to VTAC38 were also available. Because selected pairs can be operated either way (repeater low-in/high-out or high-in/low-out), both are provided.
3. Final name proposal. NPSTC proposed the following six pairings and associated names:
Name Pair (subscriber RX/TX)
VTAC33 = VTAC14/VTAC11 separation 8.335 megahertz
VTAC34 = VTAC13/VTAC12 separation 4.285 megahertz
VTAC35 = VTAC14/VTAC13 separation 0.735 megahertz (for PR/USVI only)
With many parts of the country following the federal standard of high-in/low-out for repeaters, the following pairing was also proposed to support co-siting these channels with federal users:
Name Pair (subscriber RX/TX)
VTAC36 = VTAC11/VTAC14 separation 8.335 megahertz
VTAC37 = VTAC12/VTAC13 separation 4.285 megahertz
VTAC38 = VTAC13/VTAC14 separation 0.735 megahertz (for PR/USVI only)
Because channel resources within subscriber radios are often limited, NPSTC recommended that the primary frequencies for tactical repeaters be

VTAC36, VTAC37 and VTAC38 for two reasons:
. A preferred national standard for deciding which channel pair sets to use is highly desirable, as is following the federal standard for high-in/low-out, and
. The direct or simplex mode for these pairings --- transmitting on the repeater output --- are VTAC11, VTAC12 and VTAC13 respectively. For subscriber radios using a button to select repeat or direct mode (if CTCSS and channel names on the radio display can be appropriately programmed) this configuration relieves the requirement to dedicate three added channel slots to support both direct and repeated modes, an important consideration for radios with limited capacity.
4. CTCSS recommendation. To provide for controlled repeater access, and to keep two repeaters within range of each other, but paired oppositely (such as one on VTAC33 and the other on VTAC36) from locking up, the following tone recommendation was made:
. CTCSS 136.5 hertz on repeater input, CSQ on repeater output.
5. Operational use.
. To preserve simplex channel availability, designate a primary and secondary repeater pair. For example, if one transportable repeater is used, it should be on VTAC36 (VTAC11/VTAC14 paired). If a second is needed, it should be on VTAC37 (VTAC12/VTAC13 paired) with the understanding that there would remain no available simplex VTAC channels. VTAC13 and/or VTAC14 could be used as talk around in either or both use cases, at the risk of being interfered with by repeater users who can't hear the talk-around transmissions.
. VTAC35/38 (VTAC13/VTAC14 paired) should be used as a repeater pair only in PR/USVI where VTAC11 and VTAC12 are unavailable.
. Repeater use should have no priority over simplex use of the involved channel(s).
. It is strongly recommended that tactical repeaters be activated only when called for by a COML as documented on an ICS Form 205 for an incident.
The NPSTC governing board approved this proposal June 15 with an added 45 days of public comment before the report was to be submitted to APCO's Standards Development Committee (SDC) for adding to the standard. During the 45-day period, only positive comments on the proposal were received and the completed proposal, including modifications to the APCO/NPSTC ANS 1.104.1-2010 tables, was transmitted to APCO's SDC Aug. 2. The proposal was considered by APCO's SDC and approved Nov. 19. It's pending reformatting and submittal to ANSI as Revision 1 to the published standard. The final recommendations and tables have been included in the recently released revision of the NIFOG and by several states in revisions to their own communications field operations guides (FOGs).

Site 149 never actually existed, it was always 105, and 105 changed frequencies.
"149" was presumed by RadioReference, perhaps because of the county involvement.

I went thru the area today and monitored Site 105 for a good hour or
so with Pro96Com. There were only 4 channels in use:

851.7500vdi, 852.2125c, 853.1875avd, 853.8375v

No 700 MHz. channels used at all, it looks like they removed them
altogether from the site.

None of the sites show any mention of a Site 149.

4215. Re: [PRO96COM] Re: Multiple instances running on the same computer

Yahoo group: StarCom21
Date: 2011-04-15 01:01:16 UTC
From: Rich Carlson
Topic: 4215 Message: 4215

A week or two ago I asked around about running multiple instances of Pro96Com on a single box. I had picked up a half dozen of the RS orange USB cables as they were on closeout and had several compatible radios to use.

I had been running several older Windows machines around to watch the local P25 sites, 2 in the office, one in the basement and another at work. Using LogMeIn I was able to view the computers and analyze the data but it was a bit cumbersome.

Several people had great suggestions and using them I set out about my task. Using a program suggested to me called MPROG (find it and instructions at http://www.greamerica.com/support/index.php?_m=knowledgebase&_a=viewarticle&kbarticleid=13).
I altered the Hardware Serial ID of the cables so that each was unique. I tagged each cable with a derivative of the ID I used, since the original one was 0412 I made them 0413, 0414 etc.

I set the cables up on my big, fast Windows 7 Pro-64 box (9GB RAM, I7 Quad Core, etc...) into a USB hub near the shelf with the radios.

I set the Com Port numbers to match the Device ID Serial numbers and tags (Com13, Com14 etc.).

I then made 4 copies of the PRO96Com folder and named them to match the tags I used for the USB cables.

I set up my decoding radios (2 PRO2096's, a PSR600 and a PRO197, the 600 and 197 will be replaced with 2 more 2096's this weekend) on various systems. I have them all sharing a single 800 MHz. antenna using a Stridsberg 800 MHz. amplified multicoupler.

I set each copy of the application to match the Com Port number of the cable attached and off we went. Everything worked without a hitch. I might go for broke and try setting up a couple more for grins and giggles, I have a few more cables and radios.

Thanks to Mike V. for his continued work on the most excellent Pro96Com and to the members here and on RR the job was pretty simple and it works great.

I had the same trouble When I went digital. I also have this scanner there are no set bank as ther is in alanlog in digital it's lists. you can set analog channels into though. What I did was read the manual cover to cover & just got useto it, it's pretty easy from their, I don't have the appropriate cord but, I know you can link it to your computer and that can help with programing. I also used information gatherd from radireference.com

Happy Listening,

Terry

BlackGN6,

Where are you located and what scanner do you have? We might be able to scare up somebody to help you.

Bill E.

You need to set up a bank for the Starcom tower Bloomington is using as the PRO96 will trunk 800 Starcom Digital and set the bank and freqys to "MO"...My PRO96 works great here on the 800mgz SCom Grundy tower....

*22ND & I294 PL35, WESTCHESTER, IL DUPAGE
*127TH. STREET, LEMONT, IL DUPAGE County

Section 2 -- Spectrum Efficient Technology (Maximum score 350
points)
The DuPage County ETSB STARCOM 21system design will utilize Project 25
Phase 1
FDMA 700 MHz Trunked Digital Simulcast technology. Future consideration
will be
given to Project 25 Phase II when the standard becomes available. By
using Project 25
Phase 1 FDMA standard, interoperability with neighboring Project 25
Phase 1 FDMA
users is achieved and the ability for other agencies on the State of
Illinois STARCOM 21
Network to seamlessly talk to DuPage County agencies is available. The
DuPage County
STARCOM 21 Cell will consist of twenty-one (21) 700MHz radio channels
simulcast
from eight (8) transmitter sites. Eight (8) frequencies will be reused
from the present
STARCOM 21 state license allocation in DuPage County. DuPage ETSB will
request
thirteen (13) frequencies allocated as general use to DuPage County
under the 700MHz
Regional Plan.

The eight sites are:
FCC Location Common Name Address Antenna Site Reference Registration
L1 Addison* I355 & Army Trail 1008016 Addison, IL
L2 Argonne* 9700 S. Cass N/A Darien, IL
L3 Wheaton 136 N County 1271563 Farm Road Wheaton, IL
L4 Aurora* Rt 25 & I-88 1210550 Aurora, IL
L5 Lisle* 400 Warrenville 1008035 Lisle, IL
L6 Streamwood 1450 W. Lake N/A Streamwood, IL
L7 Westchester* I-294 & Roosevelt 1008034 Westchester, IL
L8 Lemont 127th & I-355 1254900 Lemont, IL * Current STARCOM 21 site

DuPage County ETSB requests to license a total of thirteen (13)
frequency pairs:
Channel Base Frequency Mobile Frequency
Number
53-54 769.33125 MHz 799.33125 MHz
121-122 769.75625 MHz 799.75625 MHz
169-170 770.05625 MHz 800.05625 MHz
289-290 770.80625 MHz 800.80625 MHz
337-338 771.10625 MHz 801.10625 MHz
389-390 771.43125 MHz 801.43125 MHz
489-490 772.05625 MHz 802.05625 MHz
553-554 772.45625 MHz 802.45625 MHz
629-630 772.93125 MHz 802.93125 MHz
717-718 773.48125 MHz 803.48125 MHz
757-758 773.73125 MHz 803.73125 MHz
829-830 774.18125 MHz 804.18125 MHz
869-870 774.43125 MHz 804.43125 MHz

DuPage will license the 12.5kHz channels to conform with the Region 54
spectrum
efficiency plan and to follow STARCOM 21 licensing practices. Below is
an example of
the first channel.

700 MHz Spectrum
Splits for Channel 53-54
6.25KHz 12.5KHz 25.0KHz
53: 769.328125
54: 769.334375
55: 769.340625
56: 769.346875
53-54: 769.33125
55-56: 769.34375
53-56: 769.3375
Source:http://www.caprad.org
In November, last year, the Emergency Telephone Systems Board (ETSB)
abandoned the
design and build of a privately-owned DuPage County system when it was
established to
be cost prohibitive. The Radio Project Steering Committee (RPSC) was
charged with

review and comment on the technical viability of the Motorola STARCOMM
21 -12DB
Radio System. The Steering Committee engaged in a rigorous review
process to evaluate
the technical feasibility of the Motorola STARCOMM 21 -12DB proposal.
The Steering Committee has determined that the STARCOMM 21 system appears to
meet the needs of DuPage County Public Safety users with a plan to use
the current eight
channel, three site DuPage STARCOM Simulcast cell (Addison, Lisle,
Argonne, sites)
and add Aurora, Lemont, Westchester, Wheaton, and Streamwood. To improve
capacity
for DuPage and current STARCOM users, the present eight channel STARCOM 21
DuPage Cell sites will be expanded to twenty-one channels. DuPage will
request thirteen
700MHz channels from the DuPage County allocation. Motorola plans on
re-using the
DuPage County ETSB Published November 23, 2010 Rev5 9
current infrastructure to minimize the cost to DuPage and provide the
same level of
coverage to the current users on STARCOM 21.
5dBu, 40dBu, and 60dBu contour maps are provided based on the unchanged
DuPage
declared service area. The goal of the DuPage 700MHz application is to
expand the
capacity and coverage for all the users in the DuPage declared service
area and provide
seamless interoperability in the region. Those users include agencies
that are currently
part of STARCOM 21 and future agencies that comprise the region and thus
would
benefit over 5,000 users. These agencies are identified as: ISP,
Illinois Toll Highway
Authority, IDOT, Argonne Labs, IDNR, ITTF, MABAS, McHenry County, DuPage
Forest Police, DuPage Water Commission, Cook County, and Plainfield.
A special emphasis was placed on providing in-building coverage and
placement of
additional towers beyond the four that exist on the STARCOM 21 network
near critical
infrastructure. The Wheaton site was chosen because of its proximity to
the County
complex which houses the jail, courts, and administration. Central
DuPage Hospital
(CDH) is conveniently located 1 ? miles from the select Wheaton site as
well. Building
coverage issues in Elmhurst and Bartlett influenced decisions to place
towers in
Streamwood and Westchester.

Certain buildings that may exceed 18db such as, basements of malls and high rise complexes will require an in building device called a bi-directional amp (BDA). Several communities in DuPage County currently have ordinances requiring a BDA . The coverage design is a balance between costs and strategic site placement to provide a cost effective and well engineered solution. Many combinations of tower locations, antenna heights, antenna gains and patterns, along with transmitter power levels were examined before reaching a final design. The final design accomplished the required goal of 95% predicted portable coverage uniformly throughout the county while attempting to meet the Region 54 coverage guidelines for the 40 dBu contours.

A supplemental fire paging system will be utilized on VHF frequencies located throughout DuPage County to alert fire fighters and those on call. The design of this system is under review.

Section 3 -- Inter-System & Intra-System Interoperability

Public safety agencies in Du Page County will transition to the DuPage County STARCOM 21 Digital Trunked 700 MHz radio system through a slow-growth implementation plan with completion of all subscriber migration by January 2017. The STARCOM 21 Digital Trunked 700 MHz radio system will ensure full interoperability across jurisdictions and disciplines operating throughout the declared service area of Du Page County.

Best practices of actual events such as the DuPage County flooding of September, 2008 or the tornado of 2007 are real events that have helped drive the system design and architecture of this system. Events from health emergencies to infectious disease epidemics would require mutual aid users to assist DuPage County. Mutual-aid responders entering the county with Phase I FDMA radios would take advantage of the STARCOM 21 P25 Phase I standard. For those "neighboring" users not having P25 Phase I trunked capability the spares/cache radios would be deployed to those responders for use on the system during the surge event. Use of all radios through proper fleet mapping would comply and follow the Department of Homeland Security ICS

and NIMS
directives.

The Du Page County STARCOM 21 Digital Trunked 700 MHz radio system will have the capability to interoperate on any talk groups as designated by ETSB. This will allow
Phase I trunked subscribers, IFERN, ILEAS, NIPAS, ESMARN, and current Starcom21
users to utilize the new system. This will provide for intra-system interoperability.
Interoperability between existing ISPERN, IFERN, and IREACH frequencies will be
accomplished in accordance with the guidelines outlined by each respective governing
board. Patched talk groups that will allow for interoperability with VHF ISPERN, VHF
IFERN, and VHF IREACH users. This will provide for inter-system interoperability.
In addition, Du Page County will be licensing the following 700 MHz frequencies for
subscriber interoperability. These new 700 MHz frequencies are simplex radio channels.
(Note: These can be thought of as equivalent to simplex operation on the repeater talk-out
frequencies assigned for interoperability in the 700MHz band.)
The next page contains the 700MHz P25 interoperable frequencies to be loaded in all
subscriber radios on the network as required by the Region 54.

4238. RE: [ScanIllinois] DUCOMM/DuPage County ETSB FCC Applications for Starcom21

Yahoo group: StarCom21
Date: 2011-04-23 21:02:40 UTC
From: Robert Klamp Jr.
Topic: 4237 Message: 4238

I just wanted to make sure I'm reading everything right. The new 700 MHz channels will be added to Tower 101, or will DuPage County have its own system (Like Cook County)? Also it says that DuPage County will be using P25 Phase 1 Technology so we should be able to receive them on the current generation of scanners/radios right? But they are looking at P25 Phase 2 after the standard has been finalized, should that be off in the future when we hopefully will have the capability of monitoring that type of system by then, or do they want to jump on it as soon as it is released? I am just trying to get my facts straight since this will affect my county and town, lastly I saw that the document said that the rollout will happen slowly with a finish date of 2017 does this mean we will have more time to prepare for the change or is it just a date they set up to give themselves enough time to set up the new system and get on the air in case there are problems? I monitor Itasca PD, Roselle PD, Wood Dale PD, Bensenville PD and the DuPage County Sheriff regularly on a daily basis along with DuComm Fire West and MABAS Division 20 Fire Dispatch. I am just looking for any answers on how this will affect not just my listening habits but those of anybody else who monitors DuPage County Public Safety Radio Services as well.

Thank you for any answers you can provide,

Robert A Klamp Jr.

Think he meant 800Mhz which is one portion of the frequency band used by the Starcom 21 system
There are also frequencies in use in the 700 Mhz band which the 96 is not capable of receiving

MHz = megahertz. hertz used to be called 'cycles'. all radio frequencies are expressed in Hz (hertz...hundreds of hertz) kilohertz (KHz...thousands of hertz), megahertz (MHz...millions of hertz) or gigahertz (GHz...billions of hertz). example: the AM broadcast band covers the 550 KHz to 1700 KHz band. 1700 KHz could also be referred to as 1.700 MHz. 700 Mhz could be referred to as 7000 KHz, etc.

4254. Motorola XTL2500 Question

Yahoo group: StarCom21
Date: 2011-05-28 18:04:09 UTC
From: Curt Underwood
Topic: 4254 Message: 4254

My agency uses an XTL2500 radio for Interop's. I like to use the radio in scan mode. Currently the radio displays the Unit ID only for any received traffic, not the Channel name. Is there a way to display the Channel name when the scan mode stops on an active channel?

Thanks in advance!!

Curt

Hi Curt,

You would have to disable the ID display feature in the codeplug of the radio with the cps.

Hope this helps

Topic: 4258 Message: 4258

...We need your feedback --- Take our weather survey...
Published: Fri, 10 Jun 2011 09:34:54 EDT
The National Weather Service is assessing improvements to its service delivery architecture. We're in user requirements gathering phase and we're requesting comments to better inform the NWS of user's current and future service needs.

We Need Your Feedback, Take Our Weather Survey
<http://www.weather.gov/cgi-bin/nwsexit.pl?url=http://nwsrearch.ideascale.com/>

The NWS is undertaking research, once again this year, on how satisfied you are with our products and services and would appreciate your feedback. The purpose of this research is to help the NWS improve its services. The survey will take approximately 20 minutes to complete and need not be finished all at once. We also encourage you to take a moment and complete one or more of the additional sections focused on Climate, Fire Weather, Hydrology, and Tsunamis. The survey is posted here.

Subject: (CARMA) DuPage County Sheriff

I was wondering if the sheriff has narrow banded any of its current 800MHz frequencies? Also was wondering if DuPage County has started or began planning to test and switch over to Starcom yet? I haven't heard anything lately on Starcom for DuPage County, they use to test and had Tri-State FD simulcast on TG 19 but that has stopped too. I was just wondering if anybody has any info on how close or far away they are from implementing Starcom for day to day use. If anybody has any answers to the above questions I am very grateful.

Thanks in Advance,

Bob

Not sure if you are looking for a base/mobile unit or handheld

Radioshack makes the PRO106 for handheld and PRO197 for base/mobile (these are made by GRE)

Uniden makes the 396XT for handheld and the 996XT for base/mobile

GRE makes the GRE500 for handheld and GRE600 for base/mobile GRE also has the 800 you may find useful

There have been rumors that both the Uniden and GRE will have new models soon

Subject: [StarCom21] Looking for hh radio scanner to pick up police and emergenry crews in my area

Hi, I have a Radio Shack Pro-50 29 Channel Direct Programmable Handheld Scanner. I live in Arkansas and I can't pick up my town, only others. What digital trunk scanner would I need? Have a Great Day.

4269. IL FCC Applications/Modifications 6/25 - 7/2

PSR-500/600 CPU Firmware U2.0

DescriptionNew in version 2.0

. Pressing the ATT key during scanning while on a CONV object causes the object
to be stored to EEPROM immediately. This eliminates the possibility of the ATT
status change being lost due to a Priority check.

. Changed 154-156MHz range to accommodate Marine channels

. Added duplicate checking to conventional channels created via PGM NEW CONV

Radio Shack Pro-106/197 (made by GRE)

Upgrades

Display Current Firmware Level

You can check the firmware version levels by pressing '3' while the
scanner's powerup Welcome Message is displayed.

A sample output:

* uP App Ver: RF1.9
* DSP AppVer: RF1.4
* DSP VocVer: RF1.0

CPU 1.9 Upgrade

* Download upgrade here
<http://www.radioshack.com/graphics/uc/rsk/Support/SoftwareDownload/2000106_0197_V19.EXE>

* Discussion thread: here
<http://forums.radioreference.com/radio-shack-scanners/211883-new-firmware-cpu-1-9-pro-106-197-a.html>

CPU 1.9 fixes

* Pressing the ATT key during scanning while on a CONV object causes
the object to be stored to EEPROM immediately. This eliminates the
possibility of the ATT status change being lost due to a Priority

check

CPU 1.8 and DSP 1.4 Upgrades

These update utilities have complete update information included; just
download and run them -- it's easy.

* Download CPU upgrade here
<http://www.radioshack.com/graphics/uc/rsk/Support/SoftwareDownload/2000106_0197_V18.EXE>

* Download DSP upgrade here
<http://www.radioshack.com/graphics/uc/rsk/Support/SoftwareDownload/2000106_0197_DSPV14.EX
E>

* Discussion thread: here
<http://forums.radioreference.com/radio-shack-scanners/177787-pro-106-197-cpu-1-8-dsp-1-4-
released.html>

CPU 1.8 fixes

* Adds patch support for P25, Motorola and EDACS trunking
* Changes CCDump type string to "EDn" if "narrow invert" is turned on
* Corrects LCD "mirror image" issue

DSP 1.4 fixes

* Minimizes the possibility of a previous NAC displayed on a new
transmission.

4271. RACOM Network to Migrate from EDACS to P25 (7/1/11)

RACOM Network to Migrate from EDACS to P25 (7/1/11)
Executives at RACOM in Marshalltown, Iowa, announced a migration strategy for the company's public-safety network that operates in the Midwest. The EDACS network will gradually migrate to a digital IP, Project 25 (P25)-compliant platform.

The migration will begin in the third quarter with the installation of the redundant, geographically split, master P25 controller switch, the first P25 tower sites and the communications gateway that will link the EDACS-based technology to the P25-based technology.

A RACOM P25 network will provide several benefits to end users, including common technology to provide interoperability with the statewide networks in Minnesota, Illinois and Nebraska and the Iowa statewide communications plan. Agencies can also use devices from multiple manufacturers of P25-compliant mobiles and portables.

The company's current network will continue to operate until at least 2017 and most likely until about 2020. However, many RACOM network customers are preparing for the eventual migration of the network by buying multimode and/or multiband radios.

"Customers like Black Hawk County and Scott County (both in Iowa) have recently purchased new Harris radios that are capable of both the EDACS and P25 trunking protocols," said a RACOM e-newsletter. "If you haven't yet migrated to P25, you will be able to communicate with those RACOM network users who have moved to P25. This is accomplished by linking the EDACS and P25 technologies together at the network level."

No I didn't get a chance to catch any but i will check my pro96com logs tonight and see if I can find some. But from what I heard on the radio it sounded like law enforcement and was definitely local. I just wonder who's making the switch to it now? It seems like everyone wants to jump on the starcom band wagon so not sure if it was county or local but definitely some where in DuPage county.

Bob

*/Uniden HomePatrol Travel Case
/*

Hello Terry,

All New from Scanner Master - HomePatrol Travel Case!
<http://www.policescanners.net/mmccatalog/274-2774936-78715>

HomePatrol Travel Case
<http://www.policescanners.net/mmccatalog/274-2774936-78715>Designed specifically for the Uniden HomePatrol, this nylon travel case protects the radio during transport and use. Inside the travel case holds the radio in a sectioned, ruggedized compartment, which keeps the radio firmly in place. The radio is then covered by clear plastic, with cutouts for the speaker, through which you can see the HomePatrol display and operate the radio's touch screen. Cutouts on the sides of the case allow you to access all jacks including the antenna. Another section of the case can be used to hold the AC and DC power cords, antenna, GPS, extra batteries, etc. The zip-top case includes a handle for easy transport. You can not only use the case to transport your HomePatrol safely, but you can also use the radio in the case with the antenna extended out from the side and angled up. So it's great for use in the car or in a restaurant, perhaps on the seat next to you, when you want to protect the radio from most spills and scratches but also use the radio at the same time. - *Our Price $69.95*

/*Wallet-sized Quick Reference Card Uniden BC346XT & BCD396XT
*/

Wallet-sized Quick Reference Card Uniden BC346XT & BCD396XT
<http://www.policescanners.net/mmccatalog/274-2774936-78716>

Have you ever been out in your car or at an event with your UnideWallet-sized Quick Reference Card Uniden BC346XT & BCD396XT
<http://www.policescanners.net/mmccatalog/274-2774936-78716>n 396XT or 346XT scanner and forgot the key sequence to G o to a System or Start a Quick Search or turn Close Call on, etc? Now with our Quick Reference cards from Mark of MarksScanners you'll have the information you need right at your fingertips in a perfect compact design. These cards have 10 folded and laminated panels and will fit in just about any wallet or shirt pocket. The cards are 3.375 X 2.75". Made to last and written to

make your scanning experience easier. Quick Reference cards for other scanner models are now being written and will be available soon. - *Our Price $7.95*
/*Uniden HomePatrol-1 News
*/

A major firmware update will soon be released for the Uniden HomePatrol which will provide new and updated features. There will also be a further paid upgrade offered that will extend the capabilities of the already amazing HomePatrol to stratospheric new heights. Hearing testing ops and talk about information, on TG 8176 here in the metroEast.

Heard them talking about "Randy Lay" getting the trunking powerpoint put together. Only have PDFs for the 7000s and 2500s (Radios?). Going to put info in each truck in the radio/map books.
Said they may test later on tonight, when going to Anderson Hospital, etc. unit Collinsville 304 is either going to be call 401, 221, or 1021 (hard to understand), has 3 portables with him, C02, C04, C06.

We shall see what happens soon!

Terry

PS... Heard something about "getting in done in the next 10 days"

4283. New ITTF Talk Groups and others on SC21

Yahoo group: StarCom21
Date: 2011-09-06 20:31:40 UTC
From: Robert Klamp Jr.
Topic: 4283 Message: 4283

Had the following pop up on tower 101 today it looks like ITTF is expanding or possibly adding talk groups. The talk groups I found are:

30339

30340

30341

30342

30343

30344

Most are on the same radio ID, RID: 10027 but there are others on RID's in the 409XXX and 410XXX ranges as well.

Note: Zone 1 Auxiliary units are using the same radio ID as above.

Another recent find is TG 1060, RID: 30100

And lastly I believe I have found another MABAS TG. TG 4837, RID: 428134

Hope this is helpful and if anyone has any information on these new talk groups or radio ID's please let know.

Have a good day,

Bob

Note: Zone 1 Auxiliary units are using the same radio ID as above.

Another recent find is TG 1060, RID: 30100

And lastly I believe I have found another MABAS TG. TG 4837, RID: 428134

Hope this is helpful and if anyone has any information on these new talk groups or radio ID’s please let know.

Have a good day,
Bob

Mike, you are correct on
IPWMAN - Illinois Public Works Mutual Aid Network IPWMAN lol, yup a
statewide PW's mutual aid channel

4287. Ameren P25 Expansion

Yahoo group: StarCom21
Date: 2011-09-14 01:49:02 UTC
From: starcom21@RadioReference.com
Topic: 4287 Message: 4287
Attachments: 1 described; binary payloads are missing from this source WARC

Many Ameren licenses (Currently EDACS or Power Plants) are being added with P25 (8K) emissions... be on the look out for any of these sites to convert to the P25 format.

There are also many licenses that were modified in the last year (not in the last month) that HAVE NOT been added yet, pending knowing the future outcome at that time.

This also includes many old sites in IL (old MOT TYPE II system), but these have not been added to the database, unknowing if these are going to be part of the Ameren System or STARCOM21.

If you start to find changes in zones & sites, please submit information to RadioReference.

Thanks very much!

Terry

AmerenMissouri (P25)

System Name: AmerenMissouri (P25)
Location: St Louis Metro Area/E MO, IL MO
County: 17 counties
System Type: Project 25 Phase I (FDMA)
System Voice: APCO-25 Common Air Interface Exclusive
Last Updated: September 13, 2011, 8:48 am (Changed Site # 003 (Godfrey [Madison IL]) to 003 (Godfrey [IL]))

System ID List

System ID WACN
010 85343

Latest News Update Posted on 2010-12-07 15:50:14

2 AM - Noted another site on the air today, 2-002. Control channel of
856.3875, NAC of 00A, SysID of 00A, WACN 85343.

10 AM - pro96com detected 19 hits on voice channel 855.4875 but no radio
or TG affiliations

11:30 AM - mulitiple hits of an open carrier on TG 1553, sounded like a
simulcast of another system type. RID 10218. No voice or data heard.

2:43 Denied grant on TG 1553 by RID 10292.

3:00 PM SysID on both sites has changed to 010 and NAC on both sites are
now 010 (instead of 00A)
Click Here to Display All Past News Updates (3 Total)

Misc System Information

In the last year, Ameren has modified most of their (old UE) Missouri
TRS license frequencies to inclucde P25 emissions.

See the AmerenP25 Forum
<http://forums.radioreference.com/missouri-radio-discussion-forum/197558-new-ameren-800-mh
z-p25-trs.html#post1434718>

12/7/10 - SysID has been changed to 010

Note: RRDB already has an 010 listed as Integrated Wireless Network
(IWN) National Capital Region
<http://www.radioreference.com/apps/db/?sid=6784> and
Joint National Capital Region (National Geospatial-Intelligence Agency)
<http://www.radioreference.com/apps/db/?sid=5163>
Note that JNCR NGIA has a similar zone/site configuration (but the WACN
is different)

(Old info - Note, 00A is already listed in the RRDB as the system ID for
a P25 TRS in Colorado.)

4288. Firefighters balk at post-9/11 digital radios, as failures risk lives☐

Yahoo group: StarCom21
Date: 2011-09-24 14:25:34 UTC
From: RADIOMAN
Topic: 4288 Message: 4288

After 911 ,there
was a lot of emergency funding and spending on all sorts of glitzy
equipementfor
use in future disaster/fire situations ! ! This is because they found so
many faults
and problems that occured during 911 and since ! ! This is a rather long
reading
write-up regarding one of the items that most fire departments bought
for
use during future disaster/fire events ! ! It's a type of digital radio ,
produced
by
MOTOROLA , that has failed , in REAL fire situations , and has cost several
lives
because of the failure ! ! Motorola made a lot of money from these sales - -
WHY
DID SOME FAIL ? ? ?

From: SC21
Topic: 4291 Message: 4291

Grants to buy radios for Ill. emergency agencies

The Associated Press
SPRINGFIELD, Ill. -- The Illinois Terrorism Task Force has awarded $3.4 million in grants to help emergency responder agencies get new radios.

State officials say the grants were funded using federal homeland security money that the state gets from the U.S. Department of Homeland Security.

The money will help 156 agencies around the state comply with new federal regulations about their communications equipment. The regulations take effect Dec. 31, 2012.

Jonathan Monken, director of the state's emergency management agency, says complying with the federal rules was difficult for many agencies that are dealing with tight budgets.

The switch to new radios is intended to relieve congestion and create increased channel availability on public safety systems.

4292. Was: Grants to buy radios for Ill. emergency agencies; Now: Future of ISPERN

Yahoo group: StarCom21
Date: 2011-10-24 00:36:20 UTC
From: Will Sperling K9WSS
Topic: 4292 Message: 4292

Too bad they couldn't take $840K of that $3.4M, and get the ISP base stations narrow-banded; As we now know, the future of ISPERN is in jeopardy with no funding available for this transition. And, since the ISP holds the licenses for all base and mobiles (KN3600), each agency would have to license their own units on 155.475 narrowband if nothing happens before Dec 31, 2012.

If the State Police updates KN3600 for narrowband operations (APCO cost is $25) then the ISPERN mobiles statewide will be covered as far as the license goes. It would be up to the various agencies to make sure their radios are properly programmed.

The issue is going to be with the ISP base stations for the most part. If these can not be narrowbanded and are taken off the air then flash messages and transient services are going to be in jeopardy.

Back in the 1960's when grant money was flowing the ISP arranged for VHF radios to be installed in all police cars statewide. The same idea was tried but failed for StarCom21 radios. While ITTF was successful in getting radios out to individual agencies, it was for mostly just a single radio, not enough to make SC21 as useful as ISPERN has been.

Subject: [StarCom21] Re: Was: Grants to buy radios for Ill. emergency agencies; Now: Future of ISPERN

If the State Police updates KN3600 for narrowband operations (APCO cost is $25) then the ISPERN mobiles statewide will be covered as far as the license goes. It would be up to the various agencies to make sure their radios are properly programmed.

The issue is going to be with the ISP base stations for the most part. If these can not be narrowbanded and are taken off the air then flash messages and transient services are going to be in jeopardy.

Back in the 1960's when grant money was flowing the ISP arranged for VHF radios to be installed in all police cars statewide. The same idea was tried but failed for StarCom21 radios. While ITTF was successful in getting radios out to individual agencies, it was for mostly just a single radio, not enough to make SC21 as useful as ISPERN has been.

The only channels ISP really uses of the bunch are ISPERN, Point to Point and IREACH. They really don't have any activities or base stations on any of the fire channels or ESMARN.

I believe that somehow or another they will come up with a plan and the money to take care of this and ISPERN will remain in it's current use on narrowbanded radios.

Let's also remember that it isn't just the ISPERN base stations at risk here but the 2000 or so ISP vehicle radios that need to be upgraded. I have seen a lot of ISP squads with Spectra or X9000 radios, these need to be replaced. Even with the cheap CDM1250 you are looking at $1000 per car after installation. There is $2,000,000 right there and we haven't even talked about the base stations.

ISP does have links to ISPERN via the StarCom21 system so even if they do not upgrade the mobile fleet and just remove the radios the troopers can still communicate on ISPERN. The problem is that these rely on the network of ISP ISPERN base stations around the state.

The base stations, of which there are some 50 or so around the state, are likely older radios that can not be properly narrowbanded with programming so would need to be replaced. It is this project that the article speaks of. If the money for this is found and the radios upgraded then ISPERN as it is known to the rest of the state would remain as it has always been. If not then procedures will need to be adopted to accommodate it.

Hopefully they will work this issue out. I don't think the FCC will issue waivers as a rule for the narrowband "drop-dead" date of 12-31-2012, but if they did, channels like ISPERN would be right at the top of the list.

The issue is that Illinois built a Statewide ISP system with the idea of true interops on the system with all public safety agencies in the State. As we all know to well in this State, things have not gone as planned. Perhaps the Troopers can utilize their Starcom ISPERN mobile patch, but as Rich states without the ISPERN bases, the original point of ISPERN is lost. Take a look sometime at the new Wisconsin Statewide VHF trunking system with interops statewide and well as seperate regional interops. Hard to believe but them cheese heads seem to have gotten the concept right. Oh and I have contact monthly with a WSP regional manager working on the system. This will work out and hopefully our use of IREACH in the Western suburbs will only increase and become more fluid between counties. Maybe metro Chicago will develop its own interops to help with flash messages, pursuits etc .....time will tell

I know there are "narrowband kits" out there but, unfortunately, most of them are NOT FCC type accepted. So that means replacement of the transmitters. (If I remember correctly, most, if not all, of the high band transmitters are Micor or Mastr-II stations - not narrowband-able.)

100W Quantars are going for, what, about $10,000 each? (If they are even still in production / current technology...) *IF* the state could get them at that price, that's about $500k... However, if they're any more expensive than that, or the ISP needs to buy something more current, it cuts WAY into that $3.4 mil. pot of money.

It's a shame the ISP didn't make provisions for this earlier along... but they put all the eggs in one basket: STARCOM21. Can you say myopia? <sigh>

Too bad they couldn't take $840K of that $3.4M, and get the ISP base stations narrow-banded; As we now know, the future of ISPERN is in jeopardy with no funding available for this transition. And, since the ISP holds the licenses for all base and mobiles (KN3600), each agency would have to license their own units on 155.475 narrowband if nothing happens before Dec 31, 2012.

Topic: 4297 Message: 4301

We have to remember here, as rich said (in a way) ... Modifying a
license (base, mobile, whatever) is not the problem.

The problem is that nearly all the mobiles/bases can not be just
"narrowbanded", because there are too old.
They have to be replaced with new narrowband emission radios.

This is the cost involved.

IT IS "Possible" that the state could get a waiver on ISPERN..... but
you never know what the FCC will allow or not.
If Mother M gets involved, the could push it one way or the other (to
help out ISP or the literally make them buy new radio equipment.)

So much money was also spent on putting 155.28 transmitters in hospitals
for intercoordination, and now I believe that system is not even being used.

Good point, but many of these agencies should hopefully be using SC21 at this point for their operations.

DNR - State Parks, etc.... may still be using the VHF Repeaters, etc.... what is the best solution? Buy new transmitters and mobiles/portables for VHF narrowband or switch them over to SC21 and hope they can hit the system? (Could always use simplex on site or put up an 800 mhz local repeater, keeping with the idea of purchasing SC21 radios opposed to just replacing VHF)

DOC - The 800 MHz systems in place are not affected by this... but any lowband operations (if they are still in use) will just need to go to SC21 in most cases.

Health Department, Fire Marshal, Mental Health Facilities, State Fairgrounds, CMS, etc ALL Need a plan put into place.

This is just a quick email.....

Yes .280 is used but I wonder how efficient or effective it is to spend a lot of money on a monthly test? Or how much money a small muni would have to fork out for four or five calls a week. I by no means have any "answers" but I have been around long enough and seen enough to know that it seems to always fall back on money. And now is not a good time to look for money we may not have at hand. Just an opinion.

They are all staying right where they are now. A friend of mine is a Communications Technical Supervisor with ISP. I know for a fact that all of the mentioned frequencies are staying put except ESMARN & I can check with him in the next few weeks about ESMARN.

the 155.28 used by St Clair County is their own independent system. It just happens to be the same frequency chosen by the IDPH for the statewide hospital coordination. Many schools/buses are using the frequency too.

The 155.28 put in hospitals is different. They used to use it for events and roll calls, now everything appears to be done on the encrypted SC21 talkgroups (which is probably way more effective, considering how far apart some of the hospitals are in this region).

But which-ever agency installed all the 155.28s either put in a useless transmitter (that could maybe be used for ISPERN?) or basically paid for a narrowband upgrade for the hospital (to add to their .16, .34 system) However it worked out, money wasted where it could have been spent more wisely down the road.

IDOT wasnt mentioned here???? (except in the request of Chicago freq use)

SC21 IDOT appears to be used in the Chicago area and for the EPV
(Emergency Patrol Vehicles) here in the Metro St Louis area.

(The only "low band" I was referring to was DOC's 45x.xxx systems --
sorry should have said UHF, but was just thinking "lower" than 800 lol)

And then they put in Hospital talkgroups into the Starcom 21 system, and gave each hospital a radio, and how often do the hospitals actually participate in the tests and drills? Rarely. It sounded nice, and looked good on paper, but what do you do if the hospital fails to report in or check in on those tests? The money was allocated to be spent as such, and Illinois wants to be on the front line of homeland security which is fine, but a roll out and implementation of a system, which in the event of a disaster causing towers to be offline will be useless, when Starcom is a tower bases system like a cellular phone network. In reality, VHF could have done the same thing with a statewide repeater system similiar to how Starcom is setup. With the ability to use simplex.

I have heard from people who have attended communications interop meetings that there is no money for narrowbanding ISPERN, and the state has no intention to do it.
My question is wasn't every PD in the state issued a Starcom base radio? Why not utilize an ISPERN talkgroup. The squad cars already have it, the ISP Dispatch already has it, and many times the simulcast to VHF doesn't work. I don't know how many times I have had a couple scanners on at the same time and the Starcom ISPERN goes out, and the VHF ISPERN is silent.
Not sure where IFERN came into the ISPERN discussion, but IFERN is MABAS licensed frequency for mobiles, and each dispatch is required to have their own license, so that would be their responsibility, and MABAS has been upgrading and giving out radios through grants several years now.
DNR- Not sure on the parks, but the DNR officers use Starcom 21, at least for communications with Dispatch.
As far as the statewide interop plan, it existed more when they state was on low band, and all the troopers had every county in the district in their car radios and they could talk to only the county, not the local PD's. I know know with starcom if they are working in an area and out of the car, their portables only work on Starcom they cannot change over to IREACH, or the local county channel to talk to the local agency.

Yes, every PD in the state was offered a StarCom21 radio. Just 1 per department, not one for each car. Unless they come up with enough to outfit all cars in the state it isn't going to help.

While StarCom seems to be a good idea, and works well for some. The major problem was that I do not think much thinking was done for future expansions, or interop's. Like I have stated before, regardless of the rules, some still are not using the system for one reason or others.
I really do not think that any state would use a single radio system, as for about any reason it can be shut down by about any problem, which includes disaster, etc. OR even a single person that deems it necessary to shut it down. Does not really matter if it will allow Ispren, etc. as there are other freq's that seem to be used for about the same, plus the digital in car does actually receive hard copy messages in regards to Ispren, or at least some units do.

From: Richard Bauer
Topic: 4292 Message: 4313

ahh yes, the "all the eggs in one basket' issue. anyone *know* what redundancies exist to keep the SC system up and running in the event of an attack, disaster, etc. the regional 9-1-1 center i worked for had at least double and in many cases. triple, independent redundancy on each transmitter and receive site as well as triple, independent redundant methods for the dispatchers to access the radio network. does that sort of thing exist for SC21?

In addition to redundancies on the system, I'm curious what the plans are should a disaster hit in an area with a "small StarCom site"? The tornado in Streator last year comes to mind ... The site there has 3 voice channels on it. If you have (as was there) ISP, IEMA, DNR, and a bunch of local agencies how many "busies" would happen as people key up the radios? IREACH was used a lot between the non-StarCom users and although the ISP unit in charge kept asking, the IREACH patch "didn't work" otherwise that would have added to the traffic on that site.

I know there's "mobile sites" but how long do they take to deploy and get running?

all these freqs are currently in use (except 154.665 which hasent been used for several years) IDOT D-1 only uses starcom for talking with ISP. I understand that the ETP units in the East St. Louis area use starcom for dispatch.the rest of the state uses lowband in the 47 mhz area i understand that there are a few supervisors that have starcom radios.

Probably best answered by a StarCom guru, but it is my understanding that they depend on being able to use the different tower sites, if one should go down. Having looked at a few, they seem to be equip. with Generators on site, Maybe this is not the case for all !!, anyway for sure the Manito site has such. As for mobile units, and there are more, but only know of those in Urbana and Springfield. Which are trailer units, with towers that truly are not very high. So only God knows, and Motorola has not checked with him about the possible disasters that can happen. Man has a way of putting it on paper, but not doing much to insure that it truly works, even if they run the monthly SC checkins.

So being a lic amateur, we will probably be of some value, as was the case during Katrina and Joplin. That said, you can lead a horse to water but can not make them drink. And with the economy going to hell in a handbasket, there are agencys in Illinois that firmly do not have the funds to join the system. Will this change, I doubt it, even if the FCC says this is what you MUST do. As one sheriff said, when they pay the entire cost and upkeep then they can tell me what to do. One thing I do not understand, if both the US and Illinois is broke, then where will the money come from to make the StarComm a mandatory system ?
For those that work for Motorola, yes I think the systems works better now than it has at the start. Problem 1 is, that the cost per radio as with other brands is way out priced, which prevents the small town cop from owning a better system.
Then came the StarComm system, designed for ISP, (only), and along came the selling of slots to Ameren, then came the "you get one radio" for the Countys, some Fire Dept., and EMA's, then came lets sell it to Private Ambulance services. Now you can hear the local dog catcher, and even (how I do not know) a trucking firm, that I would guess go hooked up via a County Gov.
But the fact remains, nothing was done to provide the service to 100's of EMA, Fire, and other volunteers, which would be a huge income to make better things happen. (note) I can count far more volunteers that own and pay for there own radios, and do not abuse the privialege of have a radio, than I can count actual StarCom radios in use today being used by various smaller agencys.
So this is one factor that prevents the SC system from truly being on great value in Illinois and other states, under a different system name.
That's all folks, as it was a waste of time to even post, as the circle jerk just keeps going on and on.

"SUCCESS is liken the wind, it often changes direction with no reason or warning"

I'd disagree with you regarding 154.665 (D-11 HF-2) not being use for several years. Now it could be a patch (or a patching issue) on the D11 console, etc. but I've heard traffic including patrol assignments in the last 30 days on 154.665.

all these freqs are currently in use (except 154.665 which hasent been used for several years) IDOT D-1 only uses starcom for talking with ISP. I understand that the ETP units in the East St. Louis area use starcom for dispatch.the rest of the state uses lowband in the 47 mhz area i understand that there are a few supervisors that have starcom radios.

In a message dated 10/24/2011 12:16:01 P.M. Central Daylight Time, starcom21@... writes:

Good point, but many of these agencies should hopefully be using SC21 at this point for their operations.

DNR - State Parks, etc.... may still be using the VHF Repeaters, etc.... what is the best solution? Buy new transmitters and mobiles/portables for VHF narrowband or switch them over to SC21 and hope they can hit the system? (Could always use simplex on site or put up an 800 mhz local repeater, keeping with the idea of purchasing SC21 radios opposed to just replacing VHF)

DOC - The 800 MHz systems in place are not affected by this... but any lowband operations (if they are still in use) will just need to go to SC21 in most cases.

Health Department, Fire Marshal, Mental Health Facilities, State Fairgrounds, CMS, etc ALL Need a plan put into place.

This is just a quick email.....

More later

Terry

While on the subject, are these still in-use/online/simulcast or off air (ops on SC21???))

District 1 - Schaumburg (Chicago Metro Area)

Cook, DuPage, Kane, Lake, McHenry, and Will Counties

F1 (150.995) and F8 (453.4) are simulcast. Other channels can be patched as needed.

Codes - Snow or Ice
Code 1 - None Code 2 - Scattered Code 3 - 25% coverage Code 4 - 50% coverage Code 5 - 75% coverage Code 6 - 100% coverage "Lane 1" is the far left lane.

In my humble opinion, the majority of first responders in this area are paged out on VHF Frequencies. I have not heard of any company proposing offering a SC21 of P25 compatible pager. Seeing that most of the volunteers for the local EMS and Fire departments in the area have purchased compatible radio equipment to work with their local organization that getting everyone on the SC21 system would be outside the ability of most the individual volunteers budget, much less the departments they volunteer for.

The SC21 and MABIS system would seem to be organized for a scene commander that would handle communications with outside agencies or to call for additional help as need on scene.

I have always advised our local customers to continue to maintain their current equipment and licenses for the foreseeable future. Better to have known working system in reserve for if and when the new system might fail.

The VHF Hospital system has been in use for over 20 years in Illinois and I can't remember it ever relying on any kind of repeater system.

After all, if your organization does not own the infrastructure used to communicate then your at the mercy of whomever does own it.

The Starcom is a great idea as long everyone understands its inherent limitations.

Remember, its my opinion, not an absolute statement of fact!

@WA9NE, I agree, I posted the last to see if there is some thought that down the road, the push to StarCom will be, for all to have the same system. And of course there are some very good VHF systems in place for EMA, and also Fire and Ambulance services. And most have up graded there fleet radios to newer versions that work well for the interop systems.

"State of Illinois", "Communications Interoperability", and "Sound Fiscal Management". Oh no! I put all three phrases together in one sentence. Now my monitor will rust, bust, corrode and explode!

Looks like a golden opportunity for yet another no-bid, non-competative sole-source state purchase, justified by an emergency. The only glitch is we got paged to that particular fire ten years ago.

The future of VHF-Hi (and UHF) should be based on the following:

1. almost every downstate county and local public safety agency has it, uses it every day, and doesn't plan on moving. It isn't perfect, but it is consistantly unreliable in very reliable ways.

2. It's called the "Lowest Common Denominator." My cars can talk directly to veryone in the region, including out-of-state cars, without anything but a channel change.

3. If it hits the fan and/or the infrastructure fails, my cars can STILL talk directly (simplex) to everyone in the region without anything but a channel change.

4. The street price of many perfectly acceptable 50 watt VHF analog mobile radios is less than $500.00; portables are about the same. Both have more capabilities than the existing "Professional Quality" wide-band state radios being used today.

5. Anything more than $250 for a standard install is a rip-off. As long as the antenna sweeps OK, change the power cord and move on to the next one. What exactly does the state get paying 6~10 times more?

6. "MUST HAVE 100 WATT MOBILES!" Hasn't anyone ever heard of gain antennas? An 18" whip and a 100 watt radio has an ERP of 100 watts. A 3db antenna and a 50 watt radio has an ERP of 95 watts, plus twice the receiver capability. Show me why paying more gets you any better real world performance.

I found this while searching. The state is negotiating for network services and infrastructure with Motorola currently. The 5 year window (of prepaid service) on those ITTF funded radios (MABAS / ITTF) is up, the contract expired September 30, 2011.

Read more on this great frequently asked questions page.

From: Mark
Topic: 4292 Message: 4322

There a couple of SOWs (Sites On Wheels) strategically located than can be deployed. They were used in southern IL during the floods, when a site or two went down. Setup time is dependent on where in the state it needs to go, getting access to a proper set-up site, trained personnel to do the set-up, etc.

Also, most StarCom radios are set-up so a particular user can go into "Site Search" and find an alternate site to affiliate with (access) the system.

I would expect that, for something of the magnitude of the Streator tornado (or any other large scale event) most comms would move OFF of StarCom to allow for better interoperability. (Look at the interoperability templates - VHF, UHF, and 700/800) for indications of how this might be employed.)

From: StarCom21@yahoogroups.com [mailto:StarCom21@yahoogroups.com] On Behalf Of Mike Curtis

In addition to redundancies on the system, I'm curious what the plans are should a disaster hit in an area with a "small StarCom site"? The tornado in Streator last year comes to mind ... The site there has 3 voice channels on it. If you have (as was there) ISP, IEMA, DNR, and a bunch of local agencies how many "busies" would happen as people key up the radios? IREACH was used a lot between the non-StarCom users and although the ISP unit in charge kept asking, the IREACH patch "didn't work" otherwise that would have added to the traffic on that site.

I know there's "mobile sites" but how long do they take to deploy and get running?

4323. RE: [StarCom21] Re: Was: Grants to buy radios for Ill. emergency agencies; No...

A couple of observations:

StarCom was not designed to be the end-all for complete interoperability. That is what ITECS and the UCPs were designed for. For day-to-day interop, the state failed to provide a funding mechanism for upgrade of their *other* radio infrastructure (i.e., high band VHF).

However, for when the fecal matter hits the air circulation device, I think Illinois is leading in many areas... I don't know if you've ever seen one of the IECTS units. (There are 9 of them deployed around the state.) If not, you *really* need to take that opportunity if it ever presents itself to you. I think you'll be pleasantly surprised. I am one of those who volunteer to support an ITECS unit, and ours (ITECS 3) has been expanded upon well beyond what they originally came equipped with. In order for me to describe it, I'd have to use up a HUGE amount of bandwidth, which I'll reserve for the time being. Suffice it to say, even the "basic units" are wonderful assets and someone, somewhere, was thinking when they conceived them.

ITECS is along the same lines as ISPERN was - ISPERN was the FIRST interoperable system in the US for police agencies... WAY ahead of its time.

Now, in regard to "perfectly acceptable" radios... I'm not sure what line of work you engage in, but when it comes to public safety, it makes me shudder to think that anyone's life depends on lowest cost. Low cost often equates to deficient quality - not necessarily always, but often. I spent 34 years in public safety (both police and fire services) and have personally experienced Motorola/GE versus Standard/Midland/Icom. Maybe in recent times, the quality from Standard, et al, has improved over what it was when I used them, but if I were making purchasing decisions, I'd stick with a "known-good" manufacturer. Now, having said that, I cannot justify spending $7000 per unit on radios like the Motorola APX7000, but there are alternative units available which would most likely do what is necessary to communicate - with the durability and reliability necessary - and without the extra "fluff". Also, EF Johnson recently has marketed radios that are nearly "Motorola clones" for VHF, UHF and 700/800, that are much more cost effective (read: fiscally responsible). Time will tell if they are as durable in the field as those produced by Motorola and Harris (formerly GE / Ericsson / Tyco / MA-Com)... And, as I wax personal for a moment, I sincerely hope Motorola re-thinks their pricing and marketing strategies to recover both their standing and market share of the land mobile radio business.

Enough "salesmanship" for now.... ;-)

While I can not afford the High priced M. radios, and for certain not EFJ's, I probable have about the best that most can not afford, as these work well in a disaster event, or search for a missing persons, even ISP persons have used them when there system was not working correctly. But there are some that tend to purchase other brands just because a dealer said so. It does pay to have what works best and is a reliable system. And was glad to hear that others while they are not on the SC21 sytem, seem to agree. As for the ITEC units, have seen them, and yes they are OK, but sometimes a life can be lost when waiting for the unit to arrive, so we the lower income responders use and make do, and the life is saved.
OK, I am not finger pointing, but some times we need to think MONEY, and know we the tax payers are the ones that bear the cost. Keep in mind that in the past there where disasters and we still managed to save lives, as does other countries that don't have all the bells and whistles.

Starcom 21 has three site controllers designed so that if one goes down the other two can keep the system up & running. The system is also designed to "degrade gracefully".

There are a few prepositioned mobile tower sites that can be quickly moved into an area where they may be needed. They are actually complete radio stations.

IL has a little less than 15 people certified as Communications Unit Leaders. Iowa just had their second class of about thirty trained last week. In addition there is a cadre of Communications Unit Technicians. They have tools and equipment ready to travel on short notice.

ahh yes, the "all the eggs in one basket' issue. anyone *know* what redundancies exist to keep the SC system up and running in the event of an attack, disaster, etc. the regional 9-1-1 center i worked for had at least double and in many cases. triple, independent redundancy on each transmitter and receive site as well as triple, independent redundant methods for the dispatchers to access the radio network. does that sort of thing exist for SC21?

73,

Just for the record, there are currently nearly 200 COML (Communications Unit Leader) trained personnel in Illinois, although only around 20 have received state certification. The others may have opted to be a COML for their agency only (rather than becoming a state-deployable resource) or they may still be engaged in the 3-year program to complete their Task Book for certification…

I know this because I just completed the COML training 2 weeks ago, and I am going to COMT (Communications Unit Technician) next week.

Subject: RE: [StarCom21] SC21 System Redundancy WAS: Future of ISPERN

Just for the record, there are currently nearly 200 COML (Communications Unit Leader) trained personnel in Illinois, although only around 20 have received state certification. The others may have opted to be a COML for their agency only (rather than becoming a state-deployable resource) or they may still be engaged in the 3-year program to complete their Task Book for certification…

I know this because I just completed the COML training 2 weeks ago, and I am going to COMT (Communications Unit Technician) next week.

Mark – N9WYS

From: StarCom21@yahoogroups.com On Behalf Of Dave Springer

Starcom 21 has three site controllers designed so that if one goes down the other two can keep the system up & running. The system is also designed to "degrade gracefully".

There are a few prepositioned mobile tower sites that can be quickly moved into an area where they may be needed. They are actually complete radio stations.

IL has a little less than 15 people certified as Communications Unit Leaders. Iowa just had their second class of about thirty trained last week. In addition there is a cadre of Communications Unit Technicians. They have tools and equipment ready to travel on short notice.

My wish is one of these "TECH'S" would visit District 5 and fix the one dispatchers "headset" as the troopers keep saying to her "your signals are awful, there muffled", but every day she is the same while the others are nice and clear...She is a very good dispatcher but i feel for the troopers.....

I think Mr.Springer knows most of the Illinois State COML' s as he tought
the class I was in last October.

4331. Help!!! I am having trouble monitoring Mchenry County groups on my BCD396D

Yahoo group: StarCom21
Date: 2011-11-14 17:50:48 UTC
From: jon
Topic: 4331 Message: 4331

Can anybody give me some advise. I have my radio programmed with freq's according to CARMA site, and radio reference site. Using ARC396PRO software to program radio, RX audio is very distorted sounds like Mch Shf dispatch and mobiles are underwater. Is there a adjustment I need to make on the radio itself. Also, GPS coordinates from CARMA are off, Showing mchenry SPECTRA site 120 and 146 @ 42.3517N 88.3131W which puts the site nw of Lake Geneva. What am I missing? Does anybody have a ARC396d profile they can send me and I can try to load uning ARC software? Thanks. Jon jswirtzy@...

4332. Unknown aeromed ops on Starcom 21 TG 2851

Just heard helo 'TRAUMA 2' working their base 'FLIGHTCOM' re: landing at the Cook County helipad on Starcom 21 TG 2851. I heard this via the South Cook site.

Anyone know for sure which aeromed operation this would be?

Kevin

It appears that this is likely Flight For Life http://flightforlife.org
. 2008 reports indicated that their commms center IDs as 'FLIGHT COM'
and that their helos use a 'TRAUMA' callsign prefix. As of January
2009, 'TRAUMA 1' was based at Waukesha, WI, 'TRAUMA 2' was based at
McHenry, and 'TRAUMA 3' was based at Fond Du Lac, WI.

This info is a few years old but matches with my monitoring just now.

4334. More police departments look to tune public out

Yahoo group: StarCom21
Date: 2011-11-20 23:13:13 UTC
From: starcom21@RadioReference.com
Topic: 4334 Message: 4334

WASHINGTON (AP) ? Police departments around the country are moving to shield their radio communications from the public as cheap, user-friendly technology has made it easy for anyone to use handheld devices to keep tabs on officers responding to crimes.

By George Frey, AP

More police agencies, citing security needs, are encrypting communications that had been public.

The practice of encryption has become increasingly common from Florida to New York and west to California, with law enforcement officials saying they want to keep criminals from using officers' internal chatter to evade them. But journalists and neighborhood watchdogs say open communications ensure that the public receives information as quickly as possible that can be vital to their safety.

Freedom? To monitor the police? We have no such freedom. It is not a broadcast network meant for the public at large, it is meant for the internal use of the police. However, One does have to wonder what they are becoming paranoid about? How many times are the bad guys actually caught with a scanner in their possession? In my opinion, there is no reason to encrypt routine communications. Several incidents have occurred in our neighborhood that made us glad we were listening. A chemical plant explosion, a psycho with a gun two blocks from us and two housebreak suspects being hunted by helicopter are but a few things I was glad we were informed of.

Be glad we aren't in the UK. The entire country's police, fire and ems communications network is encrypted.

Kudos! You are correct. There is no reason to encrypt routine communications. Even most non routine comms as well. I haven't heard even one instsance where any criminal was caught using a scanner to evade arrest or aprehension. Especially with how complicated trunkign scanners are to just get going from the start. IMOO of course.

I suppose some could make the claim that the new generation of "self-programming" scanners like the Home Patrol make it easier for bad guys to intercept police comms, but I've always felt the advantages of an informed public greatly offset whatever risk there may be. I doubt that statistics were kept but back in the day where everyone had a Bearcat scanning their local PD, I'd be willing to bet there were more tips and more active neighborhood crime watch type efforts that assisted law enforcement. And where truly sensitive information is being exchanged (a police stakeout, for example), encryption can be used.

But, an article in the Nov. "Monitoring Times" discussed a controversial P-25 encryption issue. Apparently some recent reports were misinterpreted by internet sites and bloggers who claimed that P-25 encryption had been "hacked", allowing encrypted messages to be heard. In fact, the report just pointed out design weaknesses and features in P-25 radios that make encryption difficult for end-users, with the result that clear voice transmission of information that was intended by the user to be encrypted has occurred. More details can be found at: http://www.crypto.com/p25/

It would be unfortunate if manufacturers react to the usability concerns by making encryption the default mode.

73, Bob W9RAN

4342. WCRA Hamfest

Yahoo group: StarCom21
Date: 2011-12-09 21:35:18 UTC
From: Richard Bauer
Topic: 4342 Message: 4342

The 2012 WCRA Mid-Winter Hamfest will be held at the Kane County Fairgrounds Exposition Center in St. Charles, Illinois on Sunday, January 22, 2012. This is the same location as last year! We?re planning a great hamfest that will include the usual flea market and commercial vendors but also several interesting and informative breakout sessions, on-site VE Testing, hourly prizes and more! Hamfest hours are 8am to 1pm and there will be plenty of FREE parking.

Flea market tables may be reserved in advance and are $25, $35 with electricity. Day-Of tables, if available, will be $30, $40 with electricity. Everyone at your table must have a hamfest admission ticket. Advance admission tickets are a bargain at $8 each and include four prize stubs! Day-Of tickets will be $10 and have only one prize stub. Children under 12-years of age are admitted free. Advance tickets can be purchased by mail. Send a self-addressed, stamped envelope plus your check or money order made out to WCRA Hamfest to:

WCRA Hamfest
PO Box QSL
Wheaton, IL 60187-1055

Your order must reach us no later than January 7, 2012 to ensure timely delivery.

General questions about the hamfest? Call us at (630) 604-0157 or via e-mail at mailto:info@.... Ticket questions should be directed to me at mailto:N9DKO@.... Or see our website at http://wheatonhamfest.org/ for hamfest information.

Thanks and we hope to see you at the hamfest!

4343. Live Audio Feed - Glen Carbon, Madison County IL Area

Yahoo group: StarCom21
Date: 2011-12-10 05:29:56 UTC
From: SC21
Topic: 4343 Message: 4343

For those interested.... for about 2 weeks now, I have again been providing a Live Audio (Scanner) Feed on RadioReference.com. I have finally got the audio perfected to the best I can do for now.

Alpha Tags are displayed through WINamp player and possibly some others.

http://www.radioreference.com/apps/audio/?feedId=10074

/Note: Glen Carbon PD was the first department outside of any county or state agency to go online with the State of IL P25 Digital System. (not that anyone probably cares, but interesting) /

_*NORMAL Scanning Mode

BROADCASTING LIVE FROM GLEN CARBON IL

Agency*_**_*Frequency/TRS/Talkgroup *_
Glen Carbon Police Department STARCOM21 TG (Glen units "Glen" is dispatcher)
*Glen Carbon Police Department 770.89375 Mobile Extenders to SC21
Maryville Police Department STARCOM21 TG (Maryville units, "Glen" is dispatcher)
Glen Carbon Fire Department Madison County Fire 154.43 167.9 PL (units: ; dispatcher "Glen Carbon")
Maryville Fire Department 154.25 94.8 PL (units:)
Troy Fire Department 154.25 94.8 PL (units:)

Collinsville Fire/EMS STARCOM21 TG 8176 (units: 1200s) (Possibly rebroadcast on 154.355 91.5 PL)

ARCH Medical Helicopter Aircom St Louis Dispatch (461.525 192.8 PL)
Air-Evac Medical Helicopter Dispatch

ISPERN 155.475 67.0 PL

12/2/11 - Currently Suspended transmission of most Illinois State Police District 11 (and associated Starcom21 activity)

Notes:
*May hear Bond or Clinton County Fire/EMS or Sheriff on ocassion.
*Madison County Rural Law Talkgroup (Hamel, Livingston; units:)

and if you buy the 197 (and maybe the 106...didn't check that) you can get the programming cable for half price. i then searched the net and found a $20 coupon good for any online purchase of $175 or more. this is the coupon i found <http://www.couponcabin.com/coupons/radio-shack/>. the only issue i had was when i used the coupon i couldn't get the free ship-to-store option.

Federal Communications Commission <http://www.facebook.com/FCC>

Check out new FCC tool, MY.FCC. MyFCC is a new tool designed
to let you create a customized FCC online experience for
quick access to the tools and information you need.
Personalization options built into MyFCC make it possible to
easily create, save and manage a customized page, choosing
from a menu of "widgets" featuring a wide variety of the
FCC's most frequently used tools and services. Examples
include the latest headlines and official documents, the
Daily Digest, and quick access to forms and online filings.
The public Beta offers 22 such widgets for starters, with
more on the way. For more info:http://fcc.us/myfccblog

Building a website that serves many audiences is a complex challenge.
And it is a challenge best met in partnership with the site's frequent
users.

Introducing MyFCC Beta

by: David Robbins, Managing Director

December 20th, 2011

MyFCC <http://www.flickr.com/photos/fccdotgov/6544800509/>Building a
website that serves many audiences is a complex challenge. And it is a
challenge best met in partnership with the site's frequent users.

That's why today we are excited to announce the public Beta launch
ofMyFCC <http://my.fcc.gov/>, and to solicit and encourage your
feedback, questions and recommendations as part of our commitment to
continual improvement of the FCC.gov experience.

MyFCC is a new tool designed to let you create a customized FCC online experience for quick access to the tools and information you need. Personalization options built into MyFCC make it possible to easily create, save and manage a customized page, choosing from a menu of "widgets" featuring a wide variety of the FCC's most frequently used tools and services. Examples include the latest headlines and official documents, the Daily Digest, and quick access to forms and online filings. The public Beta offers22 such widgets <http://www.fcc.gov/help/myfcc-widgets-detail-descriptions>for starters, with more on the way.

With its various customization options, MyFCC not only lets you set up a personalized page, but also allows any individual or group to easily share content where it's needed -- either onmy.fcc.gov <http://my.fcc.gov/>or on other websites. Each individual widget can be embedded on any other website and you can also create full dashboards of widgets to share with friends and colleagues.

In the process of Beta launching FCC.gov, we are also helping other government agencies make their own online offerings accessible and open to everyone. MyFCC is powered by an open-source module known as the Content API, an innovation other federal agencies can easily install and use. TheContent API <http://drupal.org/project/contentapi>makes the contents of the website available to developers and other interested parties for projects on their own websites. For more information about our API development, visitFCC.gov/developer <http://www.fcc.gov/developer>.

We encourage everyone -- telecom professionals, legal practitioners, federal officials and consumers alike -- to give MyFCC a try and to provide feedback and suggestions for where, together, we take it from here.

Only copying STARCOM and MOSWIN groups for those that have interest in
P25 Trunked Systems.

Haven't had time lately to use pro96com on anything, so jumped back on
it today.

MANY more sites now on the Ameren Missouri P25 System.
http://www.radioreference.com/apps/db/?sid=6851

I have updated the sites and adjacent sites.

Nearly all MO and old IL (Motorola Type II) Sites have added P25
emissions to them.
Unsure if old MOT Type II sites will switch in IL or stay with SC21

Old Mot system:
http://www.radioreference.com/apps/db/?sid=918

New, updated sites in GREEN.

All sites have the same zone number as the site, as in 1-001, 13-013, etc...

4361. Maryville / Troy Fire (Madison Co IL)

Yahoo group: StarCom21
Date: 2011-12-23 06:15:51 UTC
From: SC21
Topic: 4361 Message: 4361

Maryville and Troy Fire Protection Districts (Madison County) are now on Starcom21 for dispatch and what appears to be fireground operations.

No verification on Glen Carbon Fire Protection District at this time, since they are dispatched by the same dispatcher as Maryville Fire and Glen Carbon Police (along with Maryville and Troy Police) are also all on SC21.

Collinsville Fire/EMS joined SC21 last month.

All 4 districts are adjoining areas in the South-Central part of Madison County.

No known talkgroup for any fire tone out know at this time (154.43 County/Glen Carbon; 154.25 Troy/Maryville)
Collinsville is toned out on their TG but assumed to still be using the VHF frequency for actual paging.

*To this point.... *

I have always advised our local customers to continue to maintain their current equipment and licenses for the foreseeable future. Better to have known working system in reserve for if and when the new system might fail.

Is very wise advice from You!!!!! Many Public saftey agencies ,even if saving for these changes can not afford this. They surely can not afford to have Star com 21 in every vechicle the agency has. That does not even cover the idea of needing a base station possibly.

Imagine this! I am not suprised by your comments Mark. But You got all thesecommunication manufactures out to make more money. They pay for lobbiests in D.C. to get what they want done. The FCC needs a house cleaning. I do not believe these systems like Starcom 21 & Opensky are cracked up to be what the communication manufactures claim! Fcc needs too stop and think things out better & investigate it more.This is killing many Public Saftey Agencies finance wise & the FCC nor manufactures care. I see some agentcies unable to comply, then what? Fine them, or put people in jail? I think the best advice I saw in a post earlier is keep your current communications & keep licenses current. It just is not as simple as the FCC making laws saying This what We are doing & You have to do it. My response.... then the Feds pay for all this,LOL like that would happen either.

That is something new. I haven't been told this personally, but have seen it communicated in other venues. Someone reported about $800,000 had been set aside. That MIGHT take care of some of the ISP base stations, but will do NOTHING for any mobiles.

Personally, I'll wait for confirmation from a source known to me. ;-)

Well they won't be replaced individual agency radios only ISP, probably
just 1 base radio at each ISP, and then the mobiles in that district.
Maybe that is the start at least to get the bases and some of the cars for
interop issue areas.

Just for reference, Mike, several districts have multiple transmission sites. District 5 (Joliet) has two - Joliet and Elwood, with transmitters at each site.

When you think of 22 ISP districts, if each had two sites, that's 44 transmitters. Do the math. There's hardly enough money to even replace all the ISP VHF base transmitters.

True, I don't know how they intend to work it. I was just told the money to keep ISPERN and IREACH was found. Maybe some of that might be this year and more in the budget next year? I don't know of the details.

Some of the highlights -

The ISPERN transmitters at the ISP Districts are too old to narrowband; instead, they must be replaced at an estimated cost of $840,000.

ISP has unsuccessfully sought Federal Funds to provide StarCom to all agencies to replace ISPERN – cost estimated at $218 million.

ISP is removing VHF radios from their squads

This also means the loss of ISP being able to communicate via the VHF “Point to Point” system

District 17 regularly uses Point-to-Point to communicate with various local PDs and SOs. It's a shame they'll lose that come 2013

By reading that I would assume that IREACH will be up to the local agencies. I had been told that they were talking about removing VHF radios from the cars, I wonder if the radios in the cars which are VHF are narrowbandable and the problem is more the transmitters at the district offices?

4372. ISPERN - New Update December 9

Yahoo group: StarCom21
Date: 2011-12-29 22:56:23 UTC
From: SC21
Topic: 4372 Message: 4372

ISPERN - New Update December 9

December Update -----

The Illinois Terrorism Task Force met on December 7th and discussed the ISPERN issue. All the appropriate committee chairs and members supported utlizing ITTF funds to narrowband VHF ISPERN. The entire amount will come from a Federal interoperability communications grants. The Illinois State Police and ILEAS have started the process of developing an MOU to manage the ISPERN radio replacement process and its long term maintenance and operation. Once that MOU is ready, the ISPERN Governing Board will meet to provide the authority to move forward and purchase the new equipment. There is ONE YEAR remaining to get this project completed - but it is moving in the right direction!

November Update ------

The ILEAS Governing Board met on 11/9/11 and voted to support the retention of VHF ISPERN. Executive Director Page attended the State Interoperability Executive Committee (SIEC) meeting the next day to request that they also support ISPERN. The SIEC members present voted unanimously to support the retention of VHF ISPERN. Two final steps need to take place before ILEAS can start the replacement of the ISPERN transmitters. The first is the final vote of the full Illinois Terrorism Task Force (ITTF) to allocate the funds necessary. The second is the completion of an MOU between ISP and ILEAS creating the partnership to replace and manage ISPERN in the future. More will follow as it develops.

October Update -----

ILEAS has been working behind the scene to ensure that ISPERN in its current VHF format remains as a viable part of voice communication interoperability in Illinois. All agencies have been contending with the narrrowbanding requirement. The Illinois State Police are not different with regard to ISPERN. The ISPERN transmitters at the ISP Districts are too old to narrowband; instead, they must be replaced at an estimated cost of $840,000. The State of Illinois currently does not have the funds to replace them. There is a possibility that VHF ISPERN may cease to exist on January 1, 2013. Click below to read more details.

The following email was sent on October 13, 2011 from ILEAS Executive Director Jim Page to the ILEAS membership regarding the status of ISPERN:

To All ILEAS Member Agencies:

I have three CRITICAL UPDATES that are important for all law enforcement agencies in Illinois. They are somewhat detailed so I will break them into three separate emails. The first is an update on ISPERN.
ILEAS recently attended the October 5th ISPERN Board meeting. The ISPERN Board is made up of appointees from the Illinois Sheriffs Association, Illinois Association of Chiefs of Police, Illinois State Police, APCO, etc. We have attached a copy of the ISPERN governing rules and policies <http://www.ileas.org/sites/default/files/staff/ISPERN%20manual.pdf> to a news article on ISPERN on our home page for you to read. Eleven of the 13 Board members were present as well as John Kennedy (Executive Director of the ILIACP), Steve Jackson (the StateWide Interoperability Coordinator -- IL. Emergency Management Agency), Russ Gentry (ILEAS' Communications Coordinator) and Jim Page.

The discussion that has taken place at that meeting AND a lot of work that has gone on in the last year have involved the future of ISPERN. The bottom line is this:
. ISPERN is a two-part system -- transmitters and management/dispatch by ISP and mobiles owned by locals. Many of the locals have ISPERN programmed into their primary VHF radios.
. All of the VHF ISPERN transmitters in the ISP districts are old and cannot be narrowbanded.
. ISP has unsuccessfully sought Federal Funds to provide StarCom to all agencies to replace ISPERN -- cost estimated at $218 million.
. The State of Illinois does not have the funds to replace the current VHF transmitters in the districts to keep ISPERN alive on VHF.
. Current plans are that VHF ISPERN will not be supported by ISP after December 31, 2012
. ISP is removing VHF radios from their squads
. VHF ISPERN and StarCom have been "patched" and can be simulcast
. The loss of VHF ISPERN in its current state will mean that there will be no direct communication between troopers and deputies/officers in the field outside of StarCom for those agencies that use StarCom routinely
. This also means the loss of ISP being able to communicate via the VHF "Point to Point" system
. The Chiefs and the Sheriffs (as represented at the meeting) want to retain VHF ISPERN as a continued viable interoperability channel amongst all LE in the State
. Steve Jackson from IEMA, the StateWide Interoperability Coordinator, wants to keep VHF ISPERN viable as well so that interoperability does not take a step backwards.
. The cost to replace all those VHF transmitters is estimated at $840,000.
. Knowing all of this a year ago, ILEAS put into its FY11 budget sufficient funds to replace all the VHF ISPERN transmitters at ISP.
. Those funds were from ILEAS' grant request cut in March when Congress (as you recall in an effort to avoid a government shutdown) slashed homeland security funds/grants for states significantly and Illinois/ILEAS lost 38% of the budget.
. The ISPERN Board recommended the following:
o Every effort should be made for ISPERN in VHF format to continue

o ISP will gather information on who has ISPERN, its statewide use, etc.
and provide it to the ISPERN Board
o The ILIACP, ILEAS and the ISA were asked to write letters of support
to the ISP Director to find funds to replace the VHF transmitters (the
ILEAS letter
<http://www.ileas.org/sites/default/files/staff/letter%20to%20grau%20about%20ispern.doc>ca
n
also be found on the ISPERN news article on our home page)
o If that effort fails, seek other funding -- primarily from the
Illinois Terrorism Task Force
. Since replacing VHF ISPERN is not in the ITTF budget, $840,000 of
other ITTF programs will have to be cut to afford ISPERN.
. The ILEAS Governing Board has discussed this issue at its recent
meeting. There are no plans at this point to cut any ILEAS LE-focused
programs to pay for ISPERN.
Rest assured that ILEAS will work towards the retention of VHF ISPERN.
It would be unfair to criticize ISP for this problem. A perfect storm
of circumstances conspired to bring us to this point -- unfunded
narrowbanding regulations, the state budget disaster, the economy,
technological advances, preparedness efforts -- all worked to bring us
here. The questions is how we will proceed knowing what we know.
Unless we hear otherwise, ILEAS will work with the Chiefs, Sheriffs and
ISP to do our best to retain VHF ISPERN.

Assigning a new ISPERN/ IREACH on Starcom doesn't allow communications with local agencies. It solves the problem for the state but leaves non starcom agencies out in the dark.

ISPERN/IREACH are vital for a communications link for local agencies.

ISPERN is a needed connection to ISP by many local agencies, I know in the metro east the patches are used into starcom from ISPERN and units can request an ISPERN direct without going through their dispatch who has to then contact the ISP District to put out the message. Keep in mind that ISPERN is only licensed to IL State Police District HQ's and all police mobiles in the state. Local/County PD's are not typically licensed for bases, although they montior ISPERN.

IREACH is another critical tie, to ISP from other agencies, and police departments, where local pd's and units can communicate with ISP units. Local PD's hold their own licenses for IREACH

And out here in the rural areas, there are a lot of those.
ISPERN/IREACH has been a simple, effective and affordable system for
many years.

Isn't there also a valid reason to maintain the VHF ISPERN channel as a backup, in the event the StarCom system goes down? I realize the state is already putting all of it's eggs in one basket, so to speak, but if the StarCom infrastructure fails, then what? Having the old "party line" VHF channel just makes sense to me from a failure analysis standpoint. (Not to mention that it costs much less in capital and has no monthly fee).

From: Ron Handke
Topic: 4372 Message: 4376

Assigning a new ISPREN, IREACH, yes or no, basics are that as all radios are of a programable type, it really does not effect anyone.
Yes agency's have com centers, BUT there they still can program the change in probably 5 min. or less, and same goes for mobiles or portables. At present the largest cost will be for those that have not kept up with the avancement of older type systems that will need to be replaced due to Narrow Banding.
I really think we are with post beating a dead horse !!!!!, so if it seems to be a good move then so be it. Other states in the past have had to make frequency changes due to one or another problem, but here in Illinois to many all want to have a say in what happens, when in effect those changes are not regulated by local agency's, or private enterprise.
The advancement of radio system has been to an extreme in Illinois, some due to the actual need, some due to political request.
Those that berate the SC system, well from what I hear, it is working, but as with anything patch's need to be made. Ameren does help pay for the system by using it, which serves 2 good purpose's. One being the income and the other that it now allows very quick and controlled response by Ameren. The down fall is that some cities are using the system for other than actual law enforcement activities, (street crews, dog catchers, and those that want to say, "see I am on SC")
FCC, had it not been for the FCC taking the control out of the hands of local's, then the entire spectrum would be in a shamble's, as it was headed there.

From: mark_hoeny
Topic: 4377 Message: 4377

Hearing Steger PD dispatch traffic on Starcom21 TG 30306 (ITTF Region 3B talkgroup). Dispatcher unit (radio) ID is 5746200, and officers are in the 57464xx range.

Latest CARMA profile for Will County shows their dispatch freq as 470.9375(E-Com dispatch?). Any chance that they've since changed over to the Cook County Starcom site (they straddle the Cook/Will line) and they're using this TG as an alternate for some reason? Or perhaps they're giving Starcom a "spin" to check for coverage, etc. using this TG?

Mark

Hello,

Keeping VHF in their cars would be a very smart thing to do. Since Wisconsin is going with a VHF P25 system.

And not all states will have 700/800 systems in their cars.

Take care
Spin

I've owned both the Uniden and GRE and Radio Shack Scanners

In my opinion the GRE/RadioShack programming is easier and more in line with what you're used to with older scanners when you use PC programming

In fact I just sold my Uniden 396XT for the Radio Shack handheld and I'm much happier

I own that antenna but not using it. This is the antenna I have on my SUV

4385. 2012 WCRA Mid-Winter Hamfest - St. Charles, IL

Yahoo group: StarCom21
Date: 2012-01-07 16:23:11 UTC
From: Richard Bauer
Topic: 4385 Message: 4385

The 2012 WCRA Mid-Winter Hamfest will be held at the Kane County Fairgrounds Exposition Center in St. Charles, Illinois on Sunday, January 22, 2012. This is the same location as last year! Hamfest hours are 8am to 1pm and there will be plenty of FREE parking.

We?re planning a great hamfest that will include the usual flea market and commercial vendors, on-site VE Testing, hourly prizes and more!

This year's forums include:

- At 9:30am, Rob Orr, K9RST, will present a program about the Chicago Marathon and amateur radio. \

- At 10:30 ARRL Central Division Director Dick Iseley will hold a town hall meeting.

- At 11:30 FRRL Repeater Chairman Dick Illman, AH6EZ will present a program on IRLP and Echolink.

Flea market tables may be reserved in advance and are $25, $35 with electricity. Day-Of tables, if available, will be $30, $40 with electricity. Everyone at your table must have a hamfest admission ticket. Advance admission tickets are a bargain at $8 each and include four prize stubs! Day-Of tickets will be $10 and have only one prize stub. Children under 12-years of age are admitted free.

To order tickets or tables go to <http://wheatonhamfest.org/>, download a copy of the hamfest flyer, complete the order form and send that, your check and a SASE to:

WCRA Hamfest
PO Box QSL
Wheaton, IL 60187-1055

Time is running out, though. In order to ensure timely delivery you need to get your ticket order to us in the next few days.

General questions about the hamfest? Call us at (630) 604-0157 or via e-mail at mailto:info@.... Ticket questions should be directed to me at mailto:N9DKO@.... Or see our website at http://wheatonhamfest.org/ for hamfest information.

Thanks and we hope to see you at the hamfest!

?73

Richard Bauer, N9DKO
Wheaton Community Radio Amateurs

4386. Madison County SC21 Updates

Yahoo group: StarCom21
Date: 2012-01-13 01:53:16 UTC

4387. ISP relocating dispatch rumors

Yahoo group: StarCom21
Date: 2012-01-13 11:21:05 UTC
From: Rich Carlson
Topic: 4387 Message: 4387

I have heard from a couple sources that the ISP is working on plans to consolidate the current 21 District communications centers into several regional comm centers. One source says 7, another said 3.

Apparently this is for the Comm centers only, and not changing the districts themselves, although that has been considered multiple times.

Anyone have any definitive information that would be relevant to the radio hobbyist?

I can see a number of issues around that, not the least of which is money which the state doesn't have any

But Dispatchers need to have a relatively good sense of their District. Can't tell you how many times I've heard a dispatcher ask a unit for their location to determine whose most appropriate to send on a call

If you're unit is in Waterloo IL and being dispatched from Springfield.not sure how knowledgeable those folks would be about that area

Chris, I am originally from ND now living in IL. In North Dakota the State Police were primarialy dispatched from a centralized dispatch center located on the grounds for the Capitol Bismarck but each county had a state police office. I do not know much about the state police radio network here in illinois but, in North Dakota each district had its own repeater but the distpatch in bismarck used a few different output freqs. depending on where the district is located in the state. Each district had it's own input freq. many repeaters were linked to eachother and to the dispatch at the capital. I know this system was not cheap and took years to get right but I know it worked good from experience. the county sheriff department dispatchers were very important too. The system was referred to as Point-to-Point. Money is a big issue thought and as it's been said Illinois is broke.

i encourage each ham or SWL reading this to not sit on their hands but rather to contact their local state reps and state senators about this issue. make your feelings known and the sooner the better! don't have a ham license? well, you might have a license one day so add your voice to the chorus.

don't know who your state rep or state senator are? use this link to find them:
<http://www.elections.illinois.gov/DistrictLocator/DistrictOfficialSearchByAddress.aspx> or <http://tinyurl.com/2fer8tk>.

also use this link to view the legislation <http://www.ilga.gov/legislation/BillStatus.asp?DocNum=3970&GAID=11&DocTypeID=HB&LegId=62834&SessionID=84&GA=97> and <http://www.ilga.gov/legislation/BillStatus.asp?DocNum=3972&GAID=11&DocTypeID=HB&LegId=62837&SessionID=84&GA=97> or these shortened links if the long ones becomes truncated <http://tinyurl.com/8yccy82> and <http://tinyurl.com/86ce7sy>. be respectful and cogent with your arguments.

Subject: [ChicagolandSkywarn] Fw: HB3970 & HB3972 (Distracted Driving)

Dear Fellow Illinois Hams,

I read all of the emails last week concerning the two bills pending in the IL General Assembly about distracted driving. I have also heard many hams on the air saying that they "hope" that "someone" will do something so that these bills won't include Amateur Radio Operators. I decided to look up my local state representative (Michelle Mussman), and send her an email voicing my concerns.

To my surprise, she just called me on the phone to thank me for bringing this issue to her attention! She told me that she emailed the bill's sponsors (who she said are NOT Amateur Radio Operators), and told them of my concerns. She also urged me to spread the word, and encourage all Illinois

Amateur Radio Operators to contact their state representatives to let them know how they feel about this pending legislation.

She said that she did not realize what SKYWARN was, and respects that the Illinois Secretary of State recognizes the contribution of Amateur Radio Operators. She also asked me if there was some type of lobbying group for Amateur Radio. I told her about the ARRL.

So in summary . . . your future is in your hands! Please take the time to let your voice be heard. I can't tell you how surprised I was when Representative Mussman called me this morning to thank me. Here is the website that I used to locate my state representative:

http://www.elections.illinois.gov/DistrictLocator/DistrictOfficialSearchByAddress.aspx

Sent: Sunday, January 29, 2012 9:30 PM
Subject: HB3970 & HB3972 (Distracted Driving)

Dear Representative Mussman,

This is my first time ever writing to an elected official. This email is in reference to the two bills currently being considered by the IL General Assembly: HB3970 & HB3972. The intent of these bills is to help eliminate distracted driving in Illinois.

I have been an FCC licensed Amateur Radio Operator for 29 years. I have personally used my mobile Amateur Radio equipment to report many emergencies over the past 29 years (especially in the years preceding cell phones).

I currently participate in SKYWARN which is a program that uses Amateur Radio Operators who have been trained by the National Weather Service for spotting and reporting severe weather. Having trained weather spotters in the field is essential to the National Weather Service in order to confirm what they are seeing on their radar. This aids them in issuing proper weather warnings to the public.

I also participate in several other public service related organizations including: Cook County Radio Amateur Emergency Services, Palatine Emergency Management Agency, and the Schaumburg Amateur Radio Club.

While I agree with the intent of these pending bills, I feel that the language is vague and would make operating Amateur Radio equipment while mobile illegal. As stated in the Secretary of State's Amateur Radio License Plate brochure: "Each year, amateur radio operators in Illinois offer assistance to countless victims of accidents, disasters and other mishaps by providing a vital communications link to emergency services"

I strongly urge you to work with your colleagues and add language to this pending legislation that exempts Amateur Radio Operators from these bills. If you would like more information on Amateur Radio, I would be happy to provide it to you.

Thank you for your time and consideration.

-Don Mascarella KA9RXK - Schaumburg, IL

Subject: UPDATE ON HB 3970/3972

I want to thank all of you for the universally motivated reaction to the subject bills. The position of the League is that there is no evidence that mobile Amateur Radio operation contributes to driver inattention, and regulation of mobile electronics should acknowledge that lack of evidence by excepting Amateur Radio specifically. That said, our current situation is that both bills are in committee for hearings. It appears that this will take some time and is being monitored by our SGL Charlie Richey K9DUE and others in the Capitol. I get daily reports from them which are encouraging. Our goal is to see one bill (as they are slightly redundant) pass from committee with an amendment excepting Amateur Radio, which is what our folks are advocating on your behalf.

What can you do? Join me in 'wait and see'. At this time, there is no need for a general letter and phone call campaign as the bills are not up for consideration generally. I will keep you posted on our progress. Again, I thank you for the overwhelmingly positive responses. The folks at HQ support us in these efforts with counsel and advice. Ultimately and in the tradition of other advocacy organizations such as AARP, NRA, and hundreds of others, the League's strength is in individuals like you who are willing to help me advocate this great Service.

73 and thank you again.

4400. Issues with a Pro-106 - Programmin Related (St. Clair County)

Yahoo group: StarCom21
Date: 2012-02-20 05:00:52 UTC
From: cjundt797
Topic: 4400 Message: 4400

Recently I went from a BCD-396 to a Pro-106. I got the information from rr.com and I am using Win500 to program the radio. When I am listening to a talkgroup, sometimes it gets garbled. Kind of like the channel is jumping. I am sure that this is a program issue. Can anyone contact me to help me out with this? I am specifically wanting information for the St. Clair County System. I can be reached at cjundt797@...

Thank you,
Chris

I made the same switch recently.

Not using Win500 to program though

Check the TSYS settings for the St Clair County setup you have. If set to ROAM, change to Off and see if that works better for you

The 106 has a "hotter" front end and you may be actually getting signals from two sites causing the problem

you might also want to enable the attenuator for that system especially if the st. clair system has multiple sites and you're using an outdoor antenna. that worked for me here in dupage county.

This happens also when it is scrambled. The Rat shack & GRE scanners don't mute, it just sounds digital.
Uniden mute that signal.
This might be the case?, It can also be over signal as stated before,
Don't use an outside ant for starcom.
Hope this helps, Good luck.

I've made the change off ROAM, and I am using the GRE/Radio Shack 800mhz antenna, not the stock one or an outdoor. I'll see if these changes help.

Thank you.

4405. Cleartalk System - Requesting Verification

Yahoo group: StarCom21
Date: 2012-02-21 18:12:06 UTC
From: SC21
Topic: 4405 Message: 4405

With the recent findings of a "new" site 22 and site 23, Please, if you are in the area of any of these known sites (or the sites not known to be on the air), please check to verify what the control channel and site number is.

If you can run a program to help with neighboring sites, please let us know at RR.

Thanks

4406. State Police Comm Centers may close

Yahoo group: StarCom21
Date: 2012-02-22 11:28:38 UTC
From: Rich Carlson
Topic: 4406 Message: 4406

Governor Quinn's budget proposals have mentioned briefly that 16 of the 20 ISP dispatch centers will close, and that 4 will remain to serve the entire state. Only 1 was specified to remain open (Springfield) and the three others have not yet been disclosed AFAIK.

I would assume that District Chicago's will remain open, possibly absorbing some of the nearby districts. Since District 15 is run by ITHA I assume it is not part of the plan and would remain separate and not one of the 4.

None of the posts themselves would close (yet), just consolidating the Comm Centers.

While not complete, in away it is in progress, this all started when the IEMA building was being built, but not sure if ISP will be there or use the Insurance buiding they purchased in 2010. Sort of makes sense to vacate some of the older post, as from the grape vine they are in poor condition.
Will it save money to make the move?, after awhile maybe, but this will be a rather large expense.

4410. Rumors about ISP Comm Center consolidation

Yahoo group: StarCom21
Date: 2012-02-26 01:04:23 UTC
From: Rich Carlson
Topic: 4410 Message: 4410

I have been hearing rumors from a couple sources about the eventual layout of the ISP Comm Centers. As you may recall the governor has announced as a budget saving measure that the various ISP comm centers would be consolidated into 4. Presumably this would not include District 15.

From separate sources here is one possible layout:

Des Plaines (District Chicago):
District Chicago,
Districts 2, 5, 21

DuQuoin:
Districts 12, 13,19, 22

Sterling:
Districts 1, 7, 16, 17

Springfield:
Districts 8, 8, 9, 10, 11, 14, 18, 20

One source indicates that 11 would be assigned to DuQuoin instead of Springfield.

No mention has been made about consolidating the Districts themselves, just communications. This would mean that most talkgroup assignments would remain but expect patches to become more commonplace during slow periods when less telecommunicators are working.

District consolidation, although not part of the current plan, could follow, with the conditions the State is working under anything is on the table.

Just a quick note. Not sure what the DuQuoin center looks like but the Dist 11 building (and I am assuming the disp center is inside) is a pretty new building and a very nice complex with LOTS of action in the metro east St Louis area. Outside of Chicago I am guessing it is 2nd busiest.

I would think as a scanner enthusiast this would be great.

However from a state budget aspect would not think this would help the state budget at all. I work in Sangamon County and have visited the district nine communication center once. Even though they have the space, the state would have to purchase or relocate dispatch consoles which would cost money and hire or transfer employees to Springfield area. Currently district nine as I believe have two terminals and a backup. I know District nine did house communications for nine and 18 which was fine, but housing communications for multiple communications even if just nine and ten this would be chaotic with just two to three telecommunicators.

If this would occur my guess might be the following communications would be this way.

Chicago Communications
District Chicago

Sterling Communications
District 1, 2, 5, 7, 16, 17, 21 (Starcom21 North)

Springfield Communications
District 6, 8, 9, 10, 14, 20 (Starcom21 Center)

DuQuoin Communications
District 11, 12, 13, 18, 19, 22 (Starcom21 South)

District 15 would not be involved because it is part state police and part toll authortiy.

Something I have looked into without going into exact numbers which I don't have the auhority to share I have found in this arrangement Chicago Communications would then have the least amount of incidents tha any other communication center by approximately 60,000 incidents. The other three communication centers there would be about 30,000 incident difference. Now if District 18 would goto Springfield Communications the difference would only be just under 10,000 incidents. This is based on 2011 information.

Let's talk about locations...

In reference to the suggestion offered for "Sterling Communications / StarCom21 North" below, D-17's building is also fairly new... and, IMHO, would make a more centrally located site for consolidations. But again, this is only my opinion. This is going to be entirely up to the Governor's Office to determine how to spend the money they don't have to do this.

For example, the ISP is still going to have to retain some of the TCs that are displaced by any consolidation. Based on your speculation (and it's just that) this would require the TC's from D-21 and D-05 to drive all the way to Sterling to work. I think not...

But we can speculate until the cows come home... Until this starts to roll out, we have no idea what the ISP or the Governor's office has planned.

Now, as to being a scanner enthusiast... the StarCom21 system is setup so they can still use the various talkgroups as currently established. All a TC would have to do is select it at the console. Just because the Governor's Office is talking about consolidating the various district radio centers doesn't mean they are going to consolidate the actual Districts. (At least at this time... They HAVE tested the idea of "super districts" before - that how we ended up with D-Chgo.) So I don't see how this step would improve scanning opportunities.

Mark - N9WYS

DuQuoin's District 13 building is only a couple years old so they may have new equipment in there. Might be a good move to use that, especially since it is pretty much in the center of the southern IL region. It'll be interesting.

4421. StarCom TG 20 Coverage Tests in Bureau County

Yahoo group: StarCom21
Date: 2012-03-14 12:30:49 UTC
From: Mike Curtis
Topic: 4421 Message: 4421

Over the past couple of days I've been hearing a couple people doing coverage tests in various locations throughout Bureau County on T114 and T131. They haven't used any radio identifiers but have been discussing towers and switching back and forth between towers as they test around the county.

As an interesting note, they were using radioreference.com to determine tower names :)

By JESS CHARLTON
For The Telegraph

COLLINSVILLE - Gov. Pat Quinn is proposing a budget cut for the Illinois State Police communication centers, including District 11 in Collinsville.

District 11 currently has 11 dispatchers and is the second-busiest district in the state, Chicago being first; the district is in charge of the St. Louis Metro East area. The Metro East has a population of more than 700,000 people and is the second-most populous area in the state. The Metro East area also has the most violent crime per capita in the country.

The state of Illinois has 20 call centers, and it is reported Quinn wants to reduce that to four calling centers.

Also, it is reported Quinn will be eliminating 60 to 65 of the 150 telecommunicator positions throughout the state by any means necessary.

It has been reported the estimated cost of the budget would be $15 million, which Illinois does not have. Reports said if this were to happen and the state savings of $1.2 million per year would be correct, it would take nearly 12 years to break even. However, it has been reported Quinn plans to use the $1.2 million saved for academy classes paid by the Illinois Gaming Board and tollways to make more police officers and less dispatchers.

Troy Police Chief Robert A. Rizzi Jr., president of the Southern Illinois Police Chiefs Association, said from his understanding, police officers in Collinsville will stay in their location, but dispatchers are being moved almost 100 miles away to Springfield.

"I think it will create a huge public safety issue for the community and also for the police officers," Rizzi said.

What this means is those who dispatch may or may not be familiar with the area where the call is placed and could take a while to respond. Rizzi said police need telecommunicators who are familiar with surroundings when only seconds count.

Rizzi said from his understanding of the budget plan, eight State Police districts will be in charge of a total of 44 counties, which will dispatch from Springfield; dispatching from the Missouri border to the Iowa border to the west, to the Indiana border in the east, and through Pontiac in the north to Belleville in the south.

"In a time of emergency, it is imperative dispatchers are aware of their surroundings," Rizzi said.

Rizzi said from his understanding, the money Gov., Quinn proposes to save actually is the money that State Police are reducing in the costs of overtime spent last year.

Rizzi said he does not see a change in savings by moving dispatchers from Collinsville to Springfield.

"The only thing changing is the one empty room in the Collinsville police station where dispatchers are," Rizzi said. "And it is all just to save a dollar or two."

4426. CARMA Profile Updates

Yahoo group: StarCom21
Date: 2012-04-02 01:24:00 UTC
From: Rich Carlson
Topic: 3891 Message: 4426

Finally got around to updating some CARMA Profiles:

IL Airports Guide
RED Center
StarCom21
Rail Freqs
ClearTalk
Winnebago County
Henry County
Williamson County
Bond County
Franklin County
Will County
Rock Island County
Grundy County
Kane County
DeKalb County
Lake County
Suburban Cook County
DuPage County
Bureau County

4427. Correction/Update for SC21 TG 2576

Yahoo group: StarCom21
Date: 2012-04-02 21:13:25 UTC
From: scanfan1
Topic: 4427 Message: 4427

SC21 TG 2576 is not Forest Park Police but rather the dispatch TG for South Chicago Heights and Steger PDs. The 800-series units (RID 830xx) are Steger PD and the 400-series units (RID 839xx) are South Chicago Heights PD.

4428. Joliet to StarCom21 by Fall (maybe)

4429. Fwd: (CARMA) DU-COMM 1 South dispatch on Starcom 21 This Morning

Yahoo group: StarCom21
Date: 2012-04-05 07:12:26 UTC
From: SC21
Topic: 4429 Message: 4429

S

-------- Original Message --------
Subject: (CARMA) DU-COMM 1 South dispatch on Starcom 21 This Morning
Date: Wed, 04 Apr 2012 15:35:30 -0000
From: mark_hoeny <wireless101@...>
Reply-To: carmachicago@yahoogroups.com
To: carmachicago@yahoogroups.com

As of 0830 today, DU-COMM 1 South PDs (Darien, Lisle and Woodridge)
started being dispatched on Starcom 21 talkgroup 2613 (no patch, units
actually on Starcom). Here is the breakdown:

Darien PD - "JOHN" units, radio IDs 2726xx (2685 is Darien Local TG)
Lisle PD - "ADAM" units, radio IDs 2738xx (2686 is Lisle Local TG)
Woodridge PD - "SAM" units, radio IDs 2764xx (2690 is Woodridge Local TG)

470.5125 is silent at this time.

Mark

4432. VA Medical Center Danville to SC21

Yahoo group: StarCom21
Date: 2012-04-11 04:04:08 UTC
From: starcom21@RadioReference.com
Topic: 4432 Message: 4432

99--Radio Equipment-Danville

Solicitation Number: VA25111RQ0408
Agency: Department of Veterans Affairs
Office: Indianapolis VAMC
Location: Richard L. Roudebush Department of Veterans Affairs Medical Center

The VA Illiana Health Care System, 1900 East Main St., Danville, Illinois intends to negotiate with Motorola Solutions, Inc/Starcom 21 Network to provide XTS5000 Model II and XTL5000 radio's as well as the software and additional equipment to go along with the Radio's.The Government intends to solicit and negotiate with only one (1) source under the authority of FAR 6.302-1(a)(2). The Government believes that only one (1) responsible source can provide the supplies/services based on the type of equipment needed along with the ability of the equipment to utilize the same cellular signal and frequency currently in the medical center that allows the VA Police to communicate with each other.

This notice is not a request for competitive quotes, but responses received on or before August 28, 2011 will be evaluated. A determination by the Contracting Officer not to compete this proposed action based on responses to this notice is only within the discretion of the Contracting Officer. Information received will be considered solely for purposes of determining whether to conduct a competitive procurement.
